Johnson & Stokes say: "We quite agree with your opinion that the trade is poorly satisfied with the ruling prices on onion seed, and we see no reason this season why we could not get an advance of at least 50 per cent over the prices at which we sold last year, the crop being very short, with the exception of a few varieties both in this country and Europe. Our own experience has been that we can sell quite as much or more onion seed at high prices than we can at the low prices which have been prevailing. Last year our catalogue prices were about as high as those of any house in the trade, and we sold out almost our entire supply, and do not believe we could have sold a pound more had our catalogue prices been half what they were. It is our opinion that many of the seedsmen scare off their trade among market gardeners and onion growers by making their prices too low. If with the short crop this year and their small stocks of old seed carried over the seedsmen do not make money on what onion seed they get on their contracts it will certainly be their own fault."

Northrup, Braslau & Goodwin Co. say: "We are much pleased to note you propose giving the true state of the onion seed market. We realized a shortage some weeks ago and immediately advanced our price. The trade (wholesale and retail) are in a position to make a price on onion seed the coming season that will pay them a handsome profit, as every pound harvested and in the country will be in demand, and why not do it?"

Z. De Forest Ely & Co. say: "We really are at sea and do not feel that we possess at the present writing sufficient data to give an opinion that shall be valuable. We have had demands from several houses in the last week each wanting from 1 to 2,000 pounds of Red Wethersfield onion, but we are inclined to think that they are all working for the same order."

Jas. Vick's Sons say: "We most emphatically agree with your remarks regarding price of onion seed. The price has been cut so much of late that there is very little eastern grown seed on the market, many dealers selling the cheap California grown as 'just as good.' California grown seed can be sold at wholesale for less than it actually costs to produce the superior eastern grown seed. We have for years endeavored to keep up the price to an honest figure, but last year as there was no hope of reform by setting a good example we cut the price of Yellow Globe Danvers to \$1 per pound. The crop of onion seed will be very short this year."

A leading Canadian house says: "Your remarks on the situation of onion seed are quite correct and opportune, for the past few years it has been the most uncertain commodity upon the list, and prices have been unnecessarily and ruinously cut, seemingly with the object to capture trade, but resulting in failure to attain the desired end, as the cutting of prices on a staple commodity is not unlike small-pox, very catching and dangerous to the victim. It may be that the past season's indulgence and experience will have had a good medicinal effect, and that the patients so afflicted will now have stronger minds and more desire to sell at profitable prices, and thus contribute to healthy business prosperity. There is undoubtedly a short crop of onion seed, both American and European growth, but there may be enough to meet requirements, with nothing in the way to prevent fair and profitable prices, if seed houses who issue catalogues will agree to co-operate and list at a uniform scale of prices for staple sorts, but how to accomplish this will be a matter for someone who will act on behalf of the general interests of the trade. Perhaps the AMERICAN FLORIST would continue their good offices to attain the desired end by issuing a circular to every seed house who issues a catalogue asking if they will agree to such a scale of prices, and to print and adopt them for season 1895. If they so agree, to send you at once their views, naming prices that in their judgment would be desirable, you to be the sole arbitrator, and decide from the majority of replies upon the list of prices for adoption, which would be mailed promptly. Replies would require to be sent you immediately on receipt of your circular, that no time may be lost. This is merely a suggestion; if thought well of it might have good results for the coming season's trade and establish more friendly relations."

MR. FRED S. PLANT was married October 24 in California.

BLUE GRASS has advanced again to about \$9 per 100 pounds.

VISITED CHICAGO THIS WEEK: E. V. Hallock, R. Engelmann, Henry A. Salzer, H. W. Buckbee, Thos. N. Griswold.

WE REGRET to announce the death of the wife of Mr. M. E. Fagan, chief of Seed Division, U. S. Dept. of Agriculture.

ECKFORD'S new white sweet pea Blanche Burpee is now being offered to the catalogue trade by W. Atlee Burpee & Co.

THE Telegraph Code committee are perplexed by the new jumping bean and enquire if it should be included in the code. Will some one reply?

GRAND RAPIDS, MICH.—A. J. Brown & Co., seedsmen, report a good season and collections very fair. The bean crop of Michigan, however, is only about one-half; peas fair, clover short.

GEORGE SPROULE, for a number of years bookkeeper for D. Landreth & Sons, Philadelphia, died on the 11th inst. of injuries resulting from being struck by a cable car about three weeks previously.

SHIPPING COALS TO NEWCASTLE. It is reported that a prominent Philadelphia seed house shipped many thousand pounds of Red Top and White Flat (Strap Leaf) turnip to Europe this fall; these two varieties are very scarce; not only abroad, but in this country, and this seed may find its way back to the United States at a profit to the shipper, even if a high figure was paid for it.

FLORAL DESIGNS

The Cut Flower Worker's Friend. Fine book
of 160 pages. Send \$3.50 for it, to

J. HORACE McFARLAND, Harrisburg, Pa.

London, Ont.

Flowers, notwithstanding the recent frost and following rain storms, has put an end to outdoor stuff, are still more plentiful than customers. Roses are in better supply and of better quality than usual at this season. Carnations are looking well and are coming in in sufficient quantities to supply the demand. There is a good promise of a glut when chrysanthemums come in with a probability of slashing in prices.

London has now five flower stores, three having opened within a month, the latest being Mrs. Woodliffe's, re-opened, who conducted a store a few years ago and was burned out, and Westlake, a photographer, has turned part of his place into a store. Already there is some lively competition and cutting of prices, roses suffering most.

J. Gammage & Sons, who have recently had their store renovated and refitted, had an opening on September 20. It was something new in London and took well. The store was tastefully decorated. No flowers were sold, each visitor being presented with a rose or carnation or two on leaving.

A. G. Stephens is building a 20x50 foot house.

M. J. Cole is cutting some good Beauties, Testouts and Whitneys.

M. J. Kelly, who started about a year ago, recently offered his stock and houses at auction. Part of the stock was sold but no bid could be had on the houses and property. G.

MILLBROOK, N. Y.—The Millbrook Hort. Society will hold a chrysanthemum show November 6 and 7. Full details may be had on addressing the secretary, Mr. L. Kennedy.

CEDAR RAPIDS, IOWA.—J. C. Vaughan, Chicago, and J. T. Temple of Davenport, Ia., were callers last week. I. N. Kramer & Son are putting in a new boiler and will run by hot water under pressure.

NASHVILLE, TENN.—The Nashville Floral Society has issued a premium list for a chrysanthemum show to be held November 6 to 10. Copies may be had by addressing the secretary, Mr. R. B. Currey, Nashville, Tenn.

NEW HAVEN, CONN.—The New Haven Chrysanthemum Club is arranging to give a chrysanthemum show on an extensive scale, November 7, 8 and 9, at the Armory. The sum of \$200 has been appropriated for premiums.

ELGIN, ILL.—Mr. Geo. Souster, the florist, was recently attacked by his large mastiff and badly lacerated. His injuries were at first feared to be fatal but a thorough examination proved them less serious, though certainly bad enough.

HAMILTON, ONT.—The chrysanthemum show of the Hamilton Electoral Division Agricultural Society will be held November 7 and 8. Copies of the premium list may be had on application to the secretary, Mr. Walter H. Bruce, corner King and MacNab streets.

NEW BEDFORD, MASS.—The Gardeners' and Florists' Club will hold a chrysanthemum exhibition in City Hall, opening the second Monday in November. Much interest centers in the competition for the prize cup, which has been won by Mr. John T. Rooney two years successively, and which, should he win it this year, will become his property.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—In a retail store by a young man of 20. Best of references. Address BROOKLYN, care American Florist.

Toronto.

Chrysanthemums are quite the rage now, and everybody wears them. There are quantities of them coming in, and the bloom appears to be of a much better class than in former years. I notice a good many of the white pompon being worn by ladies; it is very pretty and "fetching." In yellows Whilldin seems to predominate. Some very fine roses are to be seen in the stores too now; Dunlop had some magnificent Beauties the other day. Trade is picking up proportionately as outside gardens decline, but geraniums, cannas and a few other of the hardest bedding plants still drag out a miserable existence; a frost of about 10° in strength would be a mercy in more ways than one now. This October has been a most enjoyable month, especially to lovers of nature.

Mr. Geo. Philip was chosen superintendent of the chrysanthemum show at the last meeting of the association by the casting vote of the chairman. Mr. P. has done good service at former shows and no doubt with his experience at them will do the best he can to have the show ready for the judges on schedule time. Mr. C. Arnold will take charge of the decorating, and that it will be well done goes without saying.

The Mimics Industrial School trouble was again up for discussion and as usual caused a little acrimonious feeling. The manager and the gardener were expected down with books to show that there had been no underselling, but they did not show up, so the matter had to be laid over again. It appears to me that those who complain of this institution on account of underselling have not a leg to stand on; there was no market price the last part of last season, and florists themselves sold goods for whatever they would fetch sooner than take them home again. It was altogether to the interest of the gardener to get as high a price as possible for goods in order to make a good showing to the manager, but it could scarcely be expected that he should keep his prices to the top notch when others were selling away below. If, however, the ground is taken that the institution should not go into the business at all on account of free labor, etc., then there might be some consistency in the complaints and I should feel much inclined to side with the complainers, but even then there is the consideration that the institution is to a large extent kept up by voluntary contributions and that these boys must be given employment and taught trades in order to give them any chance at all in after life. Everything considered I think the matter should be dropped; very little harm has been done to the trade so far, and the present agitation will probably show the managers of the institution that it would be unwise for them to go into that line of business more extensively than they are. E.

San Francisco.

The new place of Mr. Robert Armstrong at Mountain View, Santa Clara County, consists of 200 acres of fine land. He has built two carnation houses, one 20x50 and the other 14x30; a house 10x30 for Adiantum cuneatum, three rose houses each 18x100 and two propagating houses, one 6x100 and the other 6x30.

His carnations are Daybreak, Grace Wilder, Silver Spray and Portia. In roses he grows Bride, Bridesmaid and Mme. Cecil Brunner. The last named rose pays well on the Pacific coast.

He has two acres of violets, The Czar and Marie Louise, in fine condition. And has planted out 25,000 chrysanthemums, principally yellow and white. Among other items he has 25,000 seedling Phoenix canariensis which he will grow for two years under contract. He makes a specialty of growing plants under contract with various firms. But will also grow cut flowers largely for the San Francisco market.

Among the attractions at Golden Gate Park are excellent collections of begonias and caladiums. Of the latter there are over 70 varieties. There are several hundred orchids, among which are some excellent specimens. Among ferns there are fine examples of adiantums, and a beautiful specimen of Todea superba. A specimen of Todea hymenophylloides is three feet in diameter, and Dicksonia antarctica is grand. Many tree ferns are planted in sheltered spots in the park and generally do well.

A huge piece of rockwork is being constructed, with caves, cascades and rustic bridge that proves a great attraction to visitors. G. M. STRATTAN.

Foreign Notes.

Habenaria Susannæ is a recently introduced terrestrial orchid from Malaysia. The flowers are pure white and very handsome. Several of these habenarias have been introduced of recent years from the tropics; they recall our native varieties in style and habit, though the flowers appear much larger.

The first chrysanthemum show of this season in England was held on September 4. Among the varieties shown were Vice-President Hardy, Mrs. J. R. Pitcher, Blushing Bride, Mme. Desgrange, Mme. Edouard Rey and Flora. This seems a very early date to find chrysanthemum flowers sufficiently advanced for exhibition; a visit to our leading chrysanthemum growers would show little in the way of bloom at that season.

A recent writer in the London *Gardener's Chronicle* speaks very favorably of carnation Lizzie McGowan, which he has been trying recently. He considers the flowers small, but says it is a most prolific bloomer, the flowers being so fragrant and pure in tint.

We have heard several complaints from growers in this country regarding chrysanthemum Golden Wedding, it having "gone off" suddenly without any apparent reason. The same trouble is reported by English growers, and the opinion seems to gain ground that this fine variety has some defect in constitution which makes it uncertain. It may be that atmospheric conditions affect it more readily than some other varieties; but this peculiarity is certainly a serious defect.

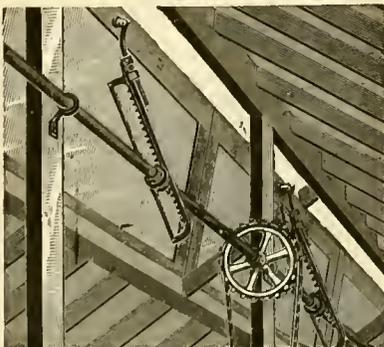

Sophro-Cattleya eximia is another of Mr. Seden's bi-generic hybrids, a cross between Sophronitis grandiflora and Cattleya Bowringiana. The flowers are in shape like the sophronitis, but very much larger, the color a brilliant rose, covered with a network of dark veins. The lip is deeper in color, with intense yellow at the base; habit of the plant dwarf.

ROCHDALE, MASS., June 4, 1894.
LOCKLAND LUMBER CO.
Gentlemen:—In answer to your inquiry as to how I like the Clipper Cypress Sash Bar would say, I think it is as near perfection as can be. Shall use no other in the future, having taken off an old roof this spring and put on a new one with clipper bars because I liked my other house so well.
I was also much pleased with the Cypress Hothed Sash you sent me, and shall probably order more this fall.
Yours Respectfully,
F. A. BLAKE.

STANDARD FLOWER POTS

Every user of Flower Pots should correspond with us before purchasing elsewhere. Our facilities are unequalled.

A. H. HEWS & CO., N. Cambridge, Mass.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipple Doppfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.
Send for price list and samples and we know you will give us an order.

SYRACUSE POTTERY CO. OFFICE: 403 North Salina Street, SYRACUSE, N. Y.

STANDARD FLOWER POTS.

We will furnish you with prices on application, and will fill all orders promptly. Our Pots are excelled by none in the market.

Chrysanthemums at Ernst Asmus'.

Some years ago when hybrids were forced extensively in winter for the New York market, the roses took the place of the chrysanthemums as soon as these were finished. In these days of American Beauty, Belle and Meteor hybrid perpetual roses are no longer a profitable crop and valley, lilacs and carnations are about all the material there is left for a cut flower grower to fall back upon, if he grows chrysanthemum extensively. Only the earliest varieties can be got out of the way in time for carnations, and this is one great point in favor of the very early sorts, which are now multiplying so rapidly.

Mr. Ernst Asmus is one of the keenest and most observant, as well as most successful growers. Whatever he does is done with a well defined object in view, and when results are unsatisfactory he manages to come pretty near finding out the cause, and can always give a good reason for any method he may pursue. The price at which chrysanthemum blooms are now marketed leaves but a small margin between the cost of production and the total pecuniary results of the crop at best. Foreseeing this, Mr. Asmus has grown his plants to four or five blooms instead of to one or two. Individual blooms may suffer as to size to a greater or less extent, but they can be grown for less money, and at prices now prevailing this is the only plan possible, if a direct loss is to be avoided. Concerning some of the ambitious varieties now more or less prominent, Mr. Asmus talks in this manner:

"Viviand-Morel, which I began to cut on October 22, is grand this year. The flowers seem stiffer and more substantial than last year. On all other varieties I am later than most growers, but singularly enough I am first in the market with this.

"Mrs. Craige Lippincott, which was being cut at this time last year will be later with me. I was disappointed in it at first; it started upspindling and seemed to have no constitution, but it has now made a good strong growth and splendid foliage.

"Mrs. Whilldin turned out this year earlier than in other years, but the trouble was everybody had it, and it sold too cheap.

"J. H. White has got to go. It is too bad, for it has some grand points, but it has a tendency to drop its petals, and they say in the stores they can sell fifty of Ivory to one of this, so what's the use of growing it? We are 'out for the stuff.'

"Mrs. E. G. Hill. These are all cut. Sales of this variety have been unsatisfactory. The stem is not up to the standard, and they do not seem to want the color in New York.

"Marie Louise, now ready to cut, has too heavy a flower for the weak neck, and on that account must be condemned.

"Mrs. J. Geo. Ils, which is very late and does not yet show what it will amount to, I am afraid will have the same trouble. They tell me it will be a good large flower. That weak neck will never hold up a big flower.

"On the other hand, Pres. W. R. Smith has a tremendous stem and grand foliage, but the flower is not large enough for the stem.

"Harry Balsley is another variety with a weak stem. Its beautiful color is its only recommendation.

"The Queen is splendid every way; noble foliage and fine flowers. I have been cutting it every day for a week. It is a good keeper, and the longer it sits the whiter it grows.

"Niveus is going to be grand. Foliage, stem and flower are all No. 1. They are a nice even lot and could be cut now, but the petals will grow yet, and you don't improve a chrysanthemum by cutting it too early.

"Golden Wedding looked fine up to the time we had those three days of steady rain in September. The plants seem to have got chilled through, and since then have had rust and fungus awful bad.

"Mrs. Cliffe (Pink Pearl) I had to throw out. It was badly rusted, and the disease was spreading from it to other varieties near it. That is the only thing to do when rust appears. It is bound to spread if allowed to remain.

"Challenge. There is a variety that had the making of the grandest chrysanthemum out. Foliage, stem and flower about perfect, but I cannot keep the center buds from blasting. They all rot away when small, and we are forced to take side shoots for our flowers.

"Major Bonnafon with me does not promise very large flowers.

"Eugene Dailedouze will take another ten days before it will be ready to cut. It is very tall, but the stems are great, and the flower will be enormous.

"H. E. Widener seems to have lost constitution and will have to take a back seat. The first year we got flowers twelve and thirteen inches, but have never been able to do it again since that time.

"Domination is another we have got to drop. It is small and diseased. That is the way with chrysanthemums, you

NEW SOIL is accountable for a good deal of boasted skill in culture.

MAIL ads. at once for our special chrysanthemum number to be issued next week.

FICUS RELIGIOSA is the Religious Fig of the East Indies. W. R. Smith says that the natives will never tell a lie under this tree; so, to avoid inconvenient conditions they never plant it near their places of business.

have got to keep dropping and dropping every year.

"This is my first year with Minerva. It appears to be a good yellow, but looks a little bit soft.

"Two old varieties that still hold their own are Wanamaker and Lincoln. Neither of them are to be sneezed at. Lincoln promises to be as fine as ever.

"Maud Dean seems to grow better, and will be more even than last year. It will not be in for two weeks yet.

"Flora Hill is doing better than ever with me. It used to show rust badly, but is all right this year. You can let this variety sit as long as you like. It moves slowly, and won't drop.

"Mermaid is not nearly as strong as last year. It will be ready to cut in about ten days.

"W. N. Rudd will come in with Mermaid. It seems lighter in color than last season. When in perfection the ends of the petals in this variety split and branch out like an elk's horn, and it is not ready to cut until this takes place.

"Mrs. Jerome Jones will be very late. No other variety will compare with it for foliage. I wish we only had a yellow like it.

"The latest clear yellow we have is Dr. Covert. It will not be in for a month yet."

Notes Taken on Chrysanthemums October 23, 1894.

[These notes were intended for last week's issue but came too late to secure space in that number.]

MRS. E. G. HILL. This variety has come in with a rush since my last notes of a week ago, making more rapid progress with us than any other variety. Commenced cutting on the 20th. This, however, was at least a week later than some of the other growers were cutting the same variety. It is a very delicate light pink in color, and very beautiful. It is a pity that it has not a stiffer stem.

YELLOW QUEEN has also made rapid progress during the past week. It is very distinct and desirable, and ought to be useful both for cut flowers and as a pot plant, being sturdy in habit, of good form and a very good color.

MRS. CRAIG LIPPINCOTT has not made such rapid progress as either of the other two mentioned, not a flower being ready to cut at this writing, but in a day or two I think that half a dozen or so will be ready for the market.

EUGENE DAILLEDOUZE is progressing favorably, but it will not be ready to cut here for ten days or two weeks.

MUTUAL FRIEND is very distinct and large, and although some of the flowers are fit to cut, still they will be better if allowed to remain on the plants a few days longer.

MINERVA still keeps ahead of Mrs. Craige Lippincott, and is likely to cut a figure as a second early yellow in the future.

MARIE LOUISE still leads them all in earliness, and is certainly a grand early white variety. In my last notes on this variety I described it as a pure white. It has to remain on the plant, however, several days after being full developed before it assumes a pure white color. It is good at any stage.

MAJOR BONNAFFON is not ready to cut yet. On account of its dwarf habit it ought to become a favorite both as a pot plant and as a cut flower. These dwarf sturdy growers are preferable to the lanky varieties for all purposes.

MRS. J. GEO. ILS. This is very late, the color only just beginning to show on the most forward buds.

MAYFLOWER promises to be very large and full and graceful in form. Flowers

even now are seven inches across, but it will not be ready to cut for a few days yet. It is inclined to be early, however, and on that account in addition to its other good qualities it will be very valuable.

ERMILDA has apparently made very little progress during the past week. However, it is just in that condition that a few days will make a great difference in it. We are expecting to cut some prime flowers from Niveus, as it is showing up in good form. The same may be said of The Queen.

J. H. TAYLOR on account of its earliness may be valuable, but it is so undecided in color that it is not very desirable.

H. L. SUNDERBRUCH sustains the good things said about it last week, and it is certainly one of the best second early yellows that we have.

IVORY is being offered in the Philadelphia market in grand form; but mine are not nearly ready to cut yet, which goes to show that some florists' methods of growing and the surroundings have a great effect, not only upon the flower itself as to size, form and finish but upon its earliness also.

LAREDO is a variety which was not mentioned in my notes last week, but it is certainly a most promising variety, being a strong, robust grower, and the few partly developed flowers promise to be very full and of very fine color, something similar to Mrs. E. G. Hill in color. This is flowering earlier than I had expected it to do. It is really more forward with me than Harry Balsley, which created such a favorable impression at many of the shows last fall. We cannot tell at this stage of what form the flowers of Laredo will be, but it has certainly several very good points in its favor.

MRS. BULLOCK is not fit to cut yet, but it looks very fine, and for an old variety is certainly among the best as a second early white.

E. L.

The Chrysanthemum Committee.

The committee to inspect new seedling and sport chrysanthemums are requested to meet at their respective places November 17 and 24, to view such late varieties as may be presented. It is very likely another of these inspections will begin about October 15, continuing every Saturday throughout the season. Such an arrangement would give all an opportunity to show their blooms when in best condition. President-elect Lonsdale has offered a suggestion which I heartily endorse, which is this:

"Respecting what you say regarding two other dates for inspecting seedlings, I believe it to be an excellent idea, and would go further, and say that when a person has a good seedling and he can produce the required number of blooms that if he can get the committee together to examine these seedlings by corresponding with the chairman I believe the Chrysanthemum Society ought to not only endorse the committee's action, but to advocate it."

Through the advice of our expert judges I hope to be able to submit to the executive committee a system of judging seedlings by points, so that when a seedling is shown at Boston, Philadelphia and Chicago an average can be made of the points awarded at the three places, and if this average is sufficiently large the variety will be entitled to the society's certificate, and those having only six blooms to show before one committee would be entitled to certificate, provided the points awarded were sufficient. In such an event a seedling scaling 85 points

shown before one committee would receive the same recognition as one receiving the same number of points before three committees, that is as far as the awarding certificates is concerned, although the commendation of nine competent judges would greatly add to its value. In this way the decision of two or more committees would be resolved into a committee as a whole, and thus do away with conflicting opinions, which are sure to occur under the present arrangement. As it now stands November 10, 17 and 24 are the dates for these inspections for this season. Any suggestions on this subject (either through the trade papers or personally) will be thankfully received.

Chrysanthemum "Philadelphia."

The new chrysanthemum bearing the above name is an entirely new type, in coloring and in form of petal or floret, and in the general contour of the flower, though it is very nearly globular as a whole. The formation of its florets and their disposition makes it graciously globular in form—if such a term may be permissible, this variety is certainly entitled to it.

BOUGAINVILLEA GLABRA SANDERIANA.

Nothing that I can say can do justice to so pronounced a novelty. It is the greatest step onward that we have had among chrysanthemums for many a day. In color it is white, illuminated with a charming shade of lemon yellow, giving it light and life never before noticed in any flower.

There is no variety that I know of which has a petal anything like it. The petals are similar in formation to a canoe with the prow incurving, similar to a parrot's bill. They droop gracefully, then again take an upward tendency, turning sometimes this way and sometimes that, giving the flower a very easy and quite unique appearance. As seen by the committee who had been invited by Mr. Graham to examine it growing at his greenhouses, it was pronounced with one accord to be the best novelty in sight. It is to be hoped that enough flowers may be secured so as they may be sent to all the exhibitions in the country, and thereby giving more people an opportunity to see it. It ought to ship well, as it appears to have all the qualities of a good shipper.

The committee recommended the award of the highest honors in the gift of the Chrysanthemum Society of America.

E. L.

Chrysanthemum Show Judges.

We print below the names of the judges at the various shows so far as reported.

CHICAGO: Wm. Scott, Buffalo; Grove P. Rawson, Elmira, N. Y.; A. W. Bennett, Pittsburg.

TORONTO: C. Swift, Rochester, N. Y. (on plants); R. Flowerday, Detroit, Mich. (on cut blooms, designs, etc.).

HAMILTON, ONT: Geo. Vair, Toronto; Wm. Gammage, London, Ont.

MILWAUKEE, WIS: C. B. Whitnall, J. A. Pettigrew and C. L. Mann, all of Milwaukee.

INDIANAPOLIS, IND.: E. G. Gillett.

CINCINNATI: John Hartje, Indianapolis; W. W. Coles, Kokomo, Ind.

PROVIDENCE, R. I.: E. W. Wood, West Newton, Mass.; A. H. Fewkes, Newton

Highlands, Mass.; M. A. Cheesman, Providence.

FREDERICK, MD.: C. F. Hale, Washington.

NEWPORT, R. I.: Richard Gardner, James McLeish, John D. Kearns (on plants and flowers); Misses Anna F. Hunter, Mary Powell and Waring (on floral arrangement), Mrs. Rob't Paterson, Ludlow Mahan and Joseph Gibson (on fruit); James Gohm, Wm. Hazard and Chas. D. Stark (on vegetables).

PITTSFIELD, MASS.: W. J. Stewart, Boston; W. A. Manda, South Orange, N. J.

Correction of Names.

In our report in last week's issue of the work of the National Chrysanthemum Society's committee at Philadelphia, the names of Mr. Hugh Graham's seedlings were given as Daybreak and Princeton. This was an error. The correct name of the pink one is Mrs. Theo. W. Wiederseim, and of the orange colored one Mrs. Wm. H. Hurley.

TRIM in summer to check luxuriance and in winter to increase it.

W. R. SMITH.

NEXT WEEK we shall publish a special chrysanthemum number, of extra size, with engraved title page and very handsomely illustrated. It will contain reports of the principal chrysanthemum shows of the same week and much other matter of special interest at this time.

Bougainvillea glabra var. Sanderiana.

During the past season this beautiful new bougainvillea has secured honors in England and on the continent wherever exhibited. First-class certificates have been obtained in London, Paris, Berlin, Manchester and York.

It has continued flowering over half a year here, both small and large plants alike being covered with blossoms, and plants in 3-inch pots were profusely covered with bloom from early spring to November.

Whether grown in a stovehouse or conservatory, it produces its bright red flowers (bracts) as freely as a fuchsia, which last a long time in perfection. It is of easy cultivation and not subject to insect pests of any kind. Many excellent judges are of opinion that this beautiful shrub is destined to become a favorite market plant.

A. DIMMOCK.

Winter Flowers.

November is not very suggestive of flowers in our part of the world, and it has no better character in other similar latitudes, for somebody (Hood I think) has written of it:

"No sky—no view—
No distance looking blue—
No warmth, no cheerful healthful ease;
No comfortable feeling in any member;
No shade—no shine—no butterflies—no bees—
No fruits—no flowers—no leaves—no buds in November."

But the poet could never have been acquainted with American florist stores, nor with chrysanthemums. They are the great universal redeeming quantity for the month, and society had best pause before discarding them. There is no month in the year when they could less be spared. I have known what it meant to keep a stove and conservatory gay without them, and I have a distinct recollection that quite a list of plants needed to be grown, and very carefully managed. Scarlet geraniums and salvias were the great standbys then, with gesneras, begonias and poinsettia in the stove. I have written of a method of working the poinsettias in the *Country Gentleman* and other papers years ago, but last season was about the first time that I knew of small pot plants being in the market. It is strange how some old methods are shelved. A good batch of cuttings should be struck early, potted, and after being well hardened planted in the open rich ground about the 1st of June. Then after good growth, but not later than the 1st of September, take off six inches of the top, trim to two or three leaves and insert single in drained 4-inch pots. They will be rooted by October, and will come in with heads but little smaller than old pot plants. Both the red and white are exceedingly useful for many purposes. Be careful not to shade too heavily when striking, and don't syringe too much or you will rot the cuttings. Several other things can be dwarfed in the same way.

In looking over a list of flowering plants for this month there is a comparative paucity of numbers, and very few indeed that would be likely to prove bread-and-butter plants; quite a number are pretty, even beautiful, but the florist needs above all things something that is easy to handle. I find an Araliaceous plant from the Mauritius, *Gastonia palmata*, which might be of considerable decorative use. It grows in the way of the fatsias, and when about 18 inches high produces very singular cream-colored flowers on the bare stems, and below the crown of bright green palmate leaves.

Hillia longiflora and four or five others from Central America and the West Indies are Rubiaceae shrubs which are mostly winter flowering and quite handsome.

There are several crinum, pancratium and hippeastrum which flower during November, and these sometimes find their way into windows. Epiphyllums again in the salmon-colored varieties would strike some people as novel.

Orchids are mostly out of the question as plants to be grown in windows. Some few wealthy customers might possibly

pay for baskets of small ferns containing flowering bulbs of calanthes, or small plants of cyripediums, etc. Calanthe Veitchii may have all the soil shaken from it; the pseudo-bulb will carry the flower over the season. In this way a superb basket may be made up with small ferns, etc. *Cælogyne ocellata* is a good free flower for this month, but it is often objected to because the dark colors in the flower, showing through its texture, have an appearance of decay. *Cyripedium Harrisianum* is often in flower, and it is still one of the best. *C. insigne Maulei* and several other of its varieties give more color than the type. *Spicerianum* also comes in now, but its hybrid *Leeanum* is often freer in growth than the parent. It commonly flowers later, however. *Dendrobium bigibbum* and *D. Phalanopsis* will be coming into flower, and they are among the most durable of all orchids. The "Indian crocus" (*Pleiones maculata* and *Wallichii*) do well, especially the former, but are often neglected and lost when at rest. *Vanda cœrulea* is perhaps the most beautiful orchid of the season, at any rate among the durable eastern ones.

Among those of the western hemisphere *Cattleya Bowringiana* is in splendid shape during November, and the little primrose *C. luteola* is sure to flower; so also is *C. marginata*, but it is apt soon to lose its vigor. The *C. labiata* is represented during November by the re-introduced type, and also sometimes by *El Dorado*. *C. Percivaliana* also begins to come in. Early varieties of *Lælia anceps* will also be in order, and also new importations of *L. autumnalis*. *Lælia Dayana* is also a free flowerer at this time, but it can not compare with the better varieties of *Cattleya marginata* for coloring. *Oncidium incurvum*, *O. Lanceanum*, *O. flexuosum* and *O. ornithohyncum* are all good things for flowering, cutting and home propagation. *O. varicosum* is fine also for November, but it will need to be more frequently imported. When the South American Indians take to farming orchids like Dutchmen do tulips it will make several of these things much more simple! *Zygopetalum Mackayii* is reckoned a stiff flower by some, but it is a good reliable old orchid for this season, easy to grow and to propagate.

Trenton, N. J. JAMES MACPHERSON.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

It is very evident from the criticism of my article on page 263 of the FLORIST by Mr. Scott that he has either never tried handling carnations as I do or that having done so has failed in the attempt. He is not justified in saying emphatically that I am in the wrong simply because he can not on his soil grow a plant larger by August 25 than can be grown in a 4-inch pot. Every florist must have noticed the great changes that have been

made in the past fifteen years in the growing of roses and "mums," and I came to the conclusion three years ago that the carnation could by a higher and different treatment be vastly improved. The change I made, which has been outlined previously, has proved very successful, especially when I state that from November 14 to April 27 of last season my McGowans brought in the New York market (which at all times was full of the same variety) \$3 per 100. Mr. S. says that Daybreak and Wm. Scott can not be grown as I advise. How can he make such a statement when he has never visited my houses, and I question if he has ever seen any of my stock. Several of my neighbors are now adopting my methods and with excellent results. Mr. S. evidently thinks this is all guesswork on my part, but my statements in these columns are based on results obtained through actual practical experience and not upon theory.

It is very true that one having a heavy soil can lift his plants with a ball and thus mature most of the buds which have started; this is impossible in this locality, owing to our soil being a sandy loam, but not clear sand, but I would not advise lifting with a ball as the soil brought in from the field is, as a rule, entirely different in character from that which has been prepared for the bench and I do not believe that plants ever do as well as where all soil is removed from the roots before planting inside. I have made very thorough tests in this matter and the method now in use here has proved the best. If a plant is lifted the latter part of August the growth is firm and much less subject to check than if it is allowed to make the rapid succulent growth which under ordinary conditions it is sure to make in September. To be sure by leaving the plant out three or four weeks longer you get a very much larger plant, but I prefer this growth to be made inside, as then I get a very much finer flower with a decidedly longer stem. Albertini did not do as well last winter in this section as we had hoped; while many growers produced some very fine bloom the quantity was below a paying stock. This season this sort is looking much better owing to a decided change in treatment. We are growing it warmer, giving it more water and it was not pinched after July 15 excepting an occasional shoot. The Stuart is doing as well as Albertini in its general growth, but the buds have a tendency to blight and run streaked with white; this feature is bad. Uncle John is sporting badly, many of the plants showing only semi-double flowers and a decided change in the foliage. This can not be due to mixture, as I have no other stock like the sports, and I know the original stock was true to name; it is merely that some sorts will not do well in every locality.

CHARLES H. ALLEN.

Some New Carnations.

We have received from Mr. H. E. Chitty, Paterson, N. J., blooms of 5 new carnations of his raising. All are meritorious, and two in particular are likely to prove of special value.

First comes Alaska, a white, parentage Lizzie McGowan × Puritan. The flowers are moderately large, pure in color, long-stemmed and very heavily built. The fact that they arrived in perfect condition after their twenty-four hours' trip, without any suggestion of sleepiness, argues well for their shipping qualities. Mr. Chitty says that this variety is exceed-

ingly prolific, and the plant forms a neat self-sustaining bush. The foliage is very silvery in tint. We feel safe in saying this will prove a valuable trade sort.

Corsair, a scarlet, is another McGowan seedling, taking very strongly after its parent; in fact it is described as a scarlet McGowan, similar in shape, habit, and freedom of bloom. Judging from memory the color hardly appeared quite as bright as The Stuart, but it is large and solid, and appears to travel well.

Two variegated sorts were included, Minnie Cook and Little Gem. The first named is white, striped and flaked with cerise; it is a large and solid flower, with fine long stems. Mr. Chitty considers its growth shows traces of Hinze's White, Little Gem resembles J. J. Harrison in color and marking, but is extremely dwarf, its maximum height being but eight or ten inches. It will be an admirable pot plant, and should be fine for bedding, though we rarely find carnations used in this way here.

Last comes Magnet, which we are inclined to call the gem of the collection. The color is a superb magenta rose, very close to that of a freshly cut American Beauty. The flower has the strong succulent stem, firm build and large size of Tidal Wave. It is a beauty, dazzling by artificial light; the color is just that tint seen so much in the fashionable millinery this autumn. It travelled perfectly; it seems to possess every requisite for a fine commercial flower. Altogether these five varieties make a very promising group.

American Beauty.

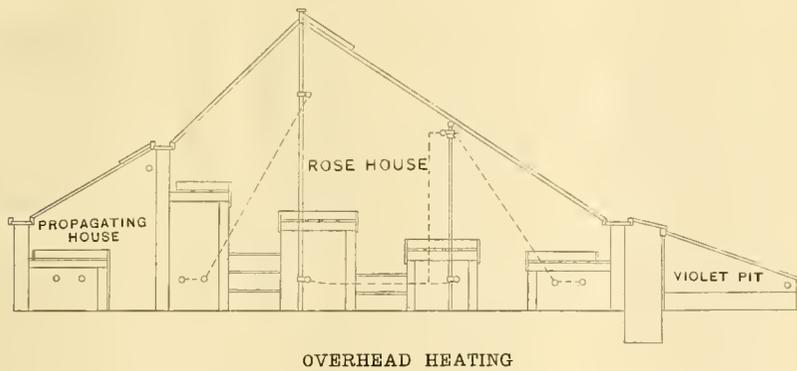

Some daily paper writer has resurrected the story about the American Beauty rose being a chance seedling in the garden of Historian Bancroft. It is, we believe, now generally acknowledged that American Beauty is synonymous with Mme. Ferdinand Jamain. But the name American Beauty has become so thoroughly established in this country that it is practically impossible to secure the use of the correct name. And as it is but little grown under its original name this may make little difference provided the facts are stated in reference lists. In the reference list of roses in the American Florist Co.'s directory and reference book the rose is given under its correct name, and American Beauty is entered as a synonym.

Though this has proved to be a case of renaming Mr. Field was certainly not to blame in the matter. At the time he discovered its merits it was supposed to be an unnamed seedling and in the absence of a name he was justified in giving it one. It was only when the rose was sent back to Europe under its new name that its identity became known.

The variety does not do nearly as well in Europe as it does here and is consequently little grown there, though in America it is one of our most important forcing varieties.

Overhead Heating.

As at this time many florists will be building new houses, remodelling old ones

or making some changes which necessitate additions to, or changes in their heating arrangement, a description of a heating system which has proved very satisfactory last winter may not be out of place. The system has been used by Evenden Bros. of Williamsport, Pa., in three houses built by them last summer, and so pleased are they with it that they intend changing the piping in some of their other houses to the same plan.

The houses are two three-quarter span rose houses, and one even span carnation house, each 110 feet long and 18 feet wide. Steam is used for heating. In each of the three-quarter span houses 9 1 1/4-inch pipes are used, 3 overhead as flows and 6 under the benches as returns, while in the even span house two flows overhead and 4 returns have been found sufficient, in each house one flow feeds two returns.

The flows are taken off a 3-inch main, which runs along the ends of the houses outside, and each has a valve as close to where it enters the house as can be conveniently reached; there is also a valve on the drip pipe of each set of returns, and besides one pipe in each set of returns is fitted with valves so that any number of pipes from 2 to 9 can be used as wanted.

The advantages of having 3 small flows overhead instead of one large one (which is generally used) is that in mild weather, when only a little heat is needed the overhead heat will not be out of proportion to that underneath, and besides a small pipe requires less steam to fill it. Again in cold weather, when all the pipes are used, the heat is more evenly distributed, and from the position of the flows none of it is wasted, as is the case when one large flow is used, as that is usually placed as close to the ridge as possible, and sometimes wrapped.

Many florists condemn overhead pipes as they say they cause red spider; this I have found to be nonsense, as in these houses no extra care was taken in syringing and the plants were perfectly clear of the pest till thrown out.

For experiment last winter I hung a thermometer horizontally 4 inches under one of the flow pipes, and it registered only the same as the one ordinarily used, which was hung from a back sash bar.

Another point (and one not to be lost sight of) in favor of the overhead pipes in rose houses is that they help materially to dry up the superabundant moisture which accumulates at night, especially after cold, cloudy days, when sufficient air cannot be given to dry it off. On that account this system would be specially beneficial to growers of Beauties, La France, Testout, or other kinds subject to black spot, which we know to be caused by excessive moisture in the atmosphere of the house.

The cut shows the position of the pipes

in the rose houses, and in the carnation house the flows are run through bangers on the purlin supports, and the returns under the side benches. J. P. RING.
Williamsport, Pa.

THE RETAIL TRADE.

Now a Department.

While we have in the past devoted considerable space to the retail end of the business we have decided to in future give more room to it and make it a regular department, so that all matters of more direct interest to the retailer may be readily found under a department head.

We invite an exchange of experiences and suggestions by the retailers in this department, and will be pleased to answer herein any questions that may be asked.

Window Displays.

This is the chrysanthemum season, and whether we take a special interest in the "mum" or not so long as we are in the retail business we have to cater to the wants and tastes of our customers; so for at least three or four weeks to come the roses and carnations will occupy but a minor position in trade. Now let us make the most of our opportunity and put our goods before the flower buying public in the most attractive way.

The first and most important feature is undoubtedly an attractive window display. Much has been said on this subject, in fact this matter has been so well discussed at various times that it would appear dry straw to be threshed over again. Still in our mind there is yet many a flower window in our cities that could be vastly improved in this respect, although it is a matter of congratulation that big strides have been made in the right direction.

For a fine window display, one to attract attention and draw an admiring crowd, no flower, except perhaps the orchid, equals the chrysanthemum. In these days, when good stock is so plentiful and moderate in price, nothing but the very best should find place in our window. The day when anything was considered good enough to fill the show window is past, in fact using second rate stock in the window is one of the very worst mistakes the florist can make. Many a dealer will argue that a window display of choice bloom is an expensive way of advertising. Perhaps it is, unless you look carefully after your display, and even if part of your stock is ruined in this way, we still hold that this is the cheapest and most remunerative way to advertise, in fact we are of the opinion that the best paying advertisement is that

which puts your goods right before the people's eyes, in your window first, on your counter next, and last but not least at an exhibition.

Speaking about losses through window displays, there is really not much of it if proper care is exercised, at least in chrysanthemums. As we all know a chrysanthemum bloom, if received in good condition, will last for a number of days. Blooms that are received from the market in the morning, no matter how fresh they may appear, are not fit to be put into the window at once, if the flowers are expected to last the day without flagging. At least this holds good with many varieties, especially most of the loose petaled sorts. If the stems are cut and then placed in water for a few hours and kept in the refrigerator, or still better in a cool cellar, and then set up for display, they will last twice as long. Still by the best of care some of the flowers will flag more or less before the day is over. These flowers need not be lost by any means; if you take them out and put back in a cool storage place as before mentioned they will stiffen up again and become again in good saleable condition.

If you make a window display of "mums" don't add any other kind of flower, as these detract rather than add to a good appearance. A background of palms and a few ferns or other decorative plants of proper height placed between the vases is good. Above all we must be careful in harmonizing colors if the display is expected to give the desired effect. If you trim up your window with pink it would be suicidal to mix such opposing pinks as Vivid and Morel, Harry Balsley or W. N. Rudd. Any one of these is grand by itself or in company with white, but keep them wide apart. In yellow the difficulty is not as great, still the effect is better if but one shade or variety is used for solid color display.

Answers to Questions.

ED. AM. FLORIST:—I have an order for a decoration for a chrysanthemum tea in white and yellow November 8, the room and table to be decorated. Will you please give me an idea as to the most effective decoration to be made with the material mentioned.

I also have an order for a bicycle to be made of dried flowers for an exhibition. Please tell me how to make it.

M. F. C.

As regards the first query you should have no difficulty in arranging an effective and appropriate decoration at the date mentioned. There will be any amount of material to choose from. Of course you will have to base your calculations on the price you are paid for such a decoration; as you do not mention the cost we will suppose it to be say \$25.

Take the table first. The centerpiece of flowers must correspond with its size and shape. If oblong the design should be also oblong with either rounded or square corners. If the table is a fairly long one, say one that will seat over a dozen people, it is best to have a centerpiece of fair size, and two smaller pieces, one on either side. For a round table the design may be circular, star shaped or any other form to correspond with outlines of the table. Let us say you have a table 10 feet in diameter; this will seat from 12 to 14 persons comfortably, the simplest and most effective centerpiece can be arranged on a circular plateau. The floral arrangements for a tea table are practically the same as that for a dinner. As the party

is seated at table the same rule as regards the height to which flowers should be raised must be laid down, which governs the arrangement for a dinner table; that is the flowers should not obstruct the vision across the table. Now in a chrysanthemum decoration you will have to sacrifice your long stems if you use specimen blooms, if the arrangement be kept below the vision. Care should be taken in the selection of varieties; the heavy and compact forms are apt to give a stiff appearance, the lighter loose petaled forms being much the best. In this line the old *Gloriosum* for yellow is one of the most effective. For green *Adiantum princeps* is good; autumn foliage might also be effectively employed, particularly the russet tinted oak branches. Your flowers for the center being yellow place one selected bloom of white in front of each cover. For circular table 10 feet in diameter the centerpiece should never exceed 4 feet; for 9 foot table 3 feet, and for 8 foot 2 feet. We use long stemmed blooms by carrying them above the level of vision; these should be placed in a tall slender vase, around the bottom of which short stemmed flowers might be placed.

The room decoration for a tea should be simple; an elaborate mantel bank is too ostentatious for the purpose. Fill a couple of vases loosely with "mums" of either color, and place on the mantel shelf. If no fire is used in the grate fill it with a few potted plants. A few blooms on the sideboard and odd corners will complete the decoration.

As to the second inquiry how to make a bicycle of dried flowers for an exhibition, you will pardon us by first giving our opinion on the appropriateness of showing such a design on such an occasion, and that is: Don't attempt it. If our customers insist upon ordering a design of this kind well and good; we will execute the order to the best of our ability, but we should not encourage this style of work which even in the hands of a most experienced worker is but an indifferent imitation of the real article. Still if you insist on it, the first and one of the most important things is to procure your wire design in proper proportion. If your wire designer has had no experience in this line you had better send your order to one located in some of our large cities. Unless your wire design is proportioned right you are bound to make a botch of it. As to arrangement it is next to impossible to describe the *modus operandi*. In a general way we will say that the tire of the wheel and the seat should be mossed, also the handles. The best material to use is probably cape flowers stemmed on half tooth picks, say white for the wheel, red for the seat and some other harmonizing shade for the handles. For the spokes *immortelles* are best. Make strings of these the length of the spokes and tie on. If you have a good mechanical head you may succeed in turning out a creditable imitation; as to the "artist" he simply isn't in it.

Cypripedium Youngianum.

This handsome plant is again flowering with us, and equals the stately *Morgania* in size and form of flower. It is a cross

between *C. Phillipinense* and *C. superbium* and was raised by Mr. Cookson. The plant when once established is a free and vigorous grower, with large broad leaves delicately tessellated. The flower scape is about sixteen inches long, carrying four large flowers, petals five inches long by three-quarters of an inch broad, drooping and densely spotted over the whole surface.

It has no regular season of flowering, but generally late spring or early fall. It is available as a decorative plant or for cut flowers, lasting long in perfection. Our plant flowered in May last and is now (October) in grand condition. We grow it on the north side of our cattleya house in a warm corner on side bench near the glass, with plenty of light but shaded from direct rays of sun. We grow the plant in a pot and use the same material used for other *Cypripedes*, giving the plant plenty of drainage. This hybrid was subsequently raised by Messrs. Veitch and named by them for Mr. Corning, but it will retain the former name, *Cypripedium hybridum Youngianum*.

W. ROBINSON.

North Easton, Mass.

Miscellaneous Seasonable Hints.

As soon as your benches of the early chrysanthemums are cut it will afford a chance to spread out many batches of stuff that have been kept crowded for want of room. Cyclamens are just beginning to flower; they don't like a damp house or too cool a one. A night temperature of 50° suits them; give them plenty of room and every week a light fumigating. *Cinerarias* and *calceolarias* will thrive in a much lower temperature. Their chief enemy is greenfly and a too heavy dose of tobacco smoke often injures the leaves. In a commercial place where appearance is not studied some tobacco stems laid between the pots will help very much to keep down the fly, but it should be renewed every time the plants are spaced, as it is useless after being on the benches a few weeks.

If you grow that common plant, *Stevia serratifolia*, endeavor to keep it as cool as possible. Common as it is it is very useful at Christmas, and adds grace and lightness to many a box of flowers. Keep it in the coolest house you have and it will be in good shape for the holidays. Another useful plant for Christmas is what we grow here under the name of *Begonia incarnata grandiflora*. Give them room and light, and not too warm; about 50° at night will do. If too warm they grow soft and light in color, and keep poorly when cut. This *begonia* always comes in for Christmas, and when well grown is a most useful flower.

If you grew a batch of *Linum trigynum* as I recommended last spring they will now be fine plants in 5 or 6-inch pots. I lifted them from the open ground and they will not lose a leaf. They will sell well at Christmas when covered with their pretty yellow flowers. The only enemy that will trouble them is red spider, and for that they are very bad. They must be syringed daily with a good "upper cut."

The poinsettias must begin the warmest house you have, provided it is light. You can't keep the leaves on them unless you have a steady heat of 65° to 70° and if they are in a shady house they will grow to an ungainly height. Another cause of leaf dropping with them is exhaustion at the root, and if kept in pots they should get a dose of liquid manure two or three times a week. If

you grow them for the flowers only they can be planted on the bench in 5 or 6 inches of soil, and if the temperature is right you will get some enormous bracts.

Bring in paper white narcissus for your Christmas trade. To me they are not very profitable except at the holidays. You can't grow paper white narcissus with any success by putting them on the path or partly under the bench. They must have the full light and a cool house, then the flowers will be large and fine.

With the increased room you will have to spread out many batches of small stuff that was propagated earlier this fall; among them the geraniums in 2-inch pots. Don't let them get crowded and lose their bottom leaves. It doesn't cost much to stand over a few thousand small plants, and the benefit to the plant is many times worth what it cost. If you once let a geranium run up to a spindling affair you never can make a sturdy plant such as your customers want for \$1.50 per dozen.

Allow me to remind you that before winter sets in you should have a good supply of potting soil put in some dry place. The great bulk of the potting is done before you can get at the soil pile outside.

A question is referred to me from "Amateur:" "What time to pot calla lilies to have them in flower at Easter, and if they should be rooted before bringing into light and heat." Amateur must be thinking about *Lilium longiflorum*; those questions would be more appropriate for that. The calla or to speak correctly *Richardia ethiopica* is not in its native home essentially a deciduous plant any more than the canna is, but we often treat it as such. In starting them if "Amateur" has purchased dry roots pot them and place in the greenhouse at once; they want no such treatment as do hyacinths, etc. You can't control their time of flowering as you can a *Lilium Harrisii* that sends up its flower spikes but once a year. Callas as the commercial florist grows them flower from September to June. A good strong plant may give you 4 or 5 flowers during the winter and large clumps many more. If callas are grown at all they should have a warm light house. It is a native of Africa as its name implies, and to be profitable should have plenty of light and a night temperature of not less than 60°. I know of no way to insure a crop of flowers at Easter but with the increased sunlight and higher temperature they are unusually most abundant in March and April. Callas were once an important plant with the florist and are still in favor with many people, but *Lilium Harrisii* as an Easter plant has almost relegated it to innocuous desuetude.

WM. SCOTT.

Exhibition at United States Nurseries.

The fall exhibition at Short Hills, N. J. is now on. Everything outside and inside the mammoth establishment is as neat as can be and there is much to interest the professional plantsman as well as the less critical public.

The maple leaves have fallen, the oaks are brown, the chestnut burrs have been long on the ground and golden rod and asters are a thing of the past, yet the nasturtiums, dahlias, gaillardias, coreopsis and *eschscholtzias* still retain their summer brilliancy in this most remarkable season and the hardy pompon chrysanthemums which are scattered in showy clumps though the herbaceous beds and borders are by no means desolate looking for they have plenty of brilliant company.

The chrysanthemum houses are natur-

ally a leading attraction. Too much praise cannot be given for the artistic arrangement of the chrysanthemum plants in the show house. From the ten foot standards down to the most diminutive specimens the grouping has been admirably done and colors well placed. Among the most noticeable varieties are Pitcher & Manda, which appears with better foliage and heavier stem than last year. Mayflower, a grand white; Mrs. Geo. M. Pullman, rich yellow; Mrs. John H. Starin, an enormous swirled white; Georgienne Bramhall, a fine large incurved lemon; Mrs. C. Lanier, incurved deepest golden yellow, a perfect globe; Georgiana Pitcher, an improved Widener; Dorothy Toller, pink; Mrs. Geo. B. Crane, magenta, and such favorite sorts as Harry Sunderbruch, The Queen, Mutual Friend and Hicks Arnold.

The orchids are in very fine form. *Cattleya labiata*, *Percivaliana* and *Dowiana*, *Cypripediums insigne*, *Pitcherianum*, *Spicerianum*, etc., *Odontoglossums grande* and *crispum*, *ocnidiums*, *zygopetalums* and *vandas* are all blooming in greatest profusion and *Cattleyas Trianae* and *Schroderae* and *laelias* give promise of an extraordinary display later on.

The fern, palm and stove houses are in their usual trim condition and many rare and curious novelties may be admired by the interested visitor. Three houses of *Adiantum Farleyense*, a house of flowering *anthuriums* and a large collection of new *dracenas* are among the best features. The number of visitors has been quite large.

A "Night Watchman."

The accompanying engraving is from a photograph of what Mr. Albert G. Rott, of Bloomington, Ind., calls his "night watchman." Mr. Rott writes:

"I consider this little instrument indispensable to any one with a small plant where it does not pay to keep a night watchman. The device consists of a thermostat placed so that as the temperature rises or falls it will expand or contract until it comes in contact with one or the other of the set screws in the posts on either side, which will close the circuit and ring the alarm bell, which may be placed in your bed room. The materials for making this simple device may be had from any dealer in electrical supplies at about \$3 and any one of ordinary intelligence can put it together."

Boston.

Tuesday and Wednesday were visiting days among the chrysanthemum growers. Under the escort of the garden committee of the Massachusetts Horticultural Society a trip was made on Tuesday to Waban Rose Conservatories at Natick and on Wednesday to the establishments of N. T. Kidder at Milton and C. V. Whitten at Dorchester. To describe or even enumerate all the chrysanthemums that were seen at these three places is out of the question, but there are some points in the experiences of the expert growers in charge of each well worthy of recording for the benefit of others. It is no exaggeration to say that at Waban Conservatories was seen a show which taken altogether could not be found elsewhere in this country. A noticeable feature here was the earliness of many of the leading sorts as compared with New York or Philadelphia. It was something of a surprise to find such varieties as Major Bonnaffon, Lincoln, Widener, Robert McInnis, Mrs. Jerome Jones and Mrs. J. Geo.

Its in fullest bloom on October 30. Eugene Dailedouze as seen here is a wonder, and to quote Mr. Montgomery "knocks Golden Wedding higher than a kite." Mr. Montgomery is delighted with Inter-Ocean. The flowers on opening presented a more or less striped appearance, and made an unfavorable impression, but the color is now a nice soft pink all over and it is a gem every way. A peculiar fact regarding Mrs. Jerome Jones is that one lot of this variety in a cold house is fully a week earlier than a lot which has been kept in a warm rose house, this circumstance seeming to verify the theory that early ripening rather than forcing in heat is the most effectual method for bringing chrysanthemums in early. Harry Sunderbruch has been ready to cut since

A "NIGHT WATCHMAN."

October 5. Mr. Montgomery says of it: "E. G. Hill ought to be proud of that variety, I am." Major Bonnaffon is a perfect picture and Mrs. Its is grand with an enormous high built flower and foliage like oak leaves. M. B. Spaulding is another that will be likely to supersede Golden Wedding, which is in rather unpromising condition. As to Challenge, all the center buds are gone, having rotted off, although the plants have never had a drop of liquid manure, to the use of which some growers have ascribed this peculiarity of Challenge. Colonel Wm. B. Smith, Queen, Niveus, Wana-maker and Mermaid are also among the varieties which show up finely and will furnish some of the prize winners at the show next week. After inspecting the houses the company rode to Bailey's Hotel, where they were lavishly entertained as the guests of Mr. E. M. Wood, and much interesting and instructive chrysanthemum lore abounded in the after dinner speeches.

At Mr. N. T. Kidder's which is a private place, the principal attraction was the specimen plants, which Wm. Martin, the gardener, has been carefully nursing all summer. Twenty-seven of these plants fill one large house, each specimen measuring from four to six feet across. As this collection will be heard from at the exhibition next week further allusion to it at present time is unnecessary. A rousing dinner at Mr. Martin's was an important and highly appreciated part of the program.

At Mr. C. V. Whitten's the visitors were welcomed by that gentleman and Lawrence Cotter, his gardener and right hand man. Such varieties as Mrs. E. G. Hill and other early sorts are already cleared off and longiflorum lilies in pots

have taken their place. Several benches, each one hundred feet long, of Ivory are so loaded with bloom as to give the impression of a huge snow bank. Mrs. Craige Lippincott is highly esteemed by Mr. Cotter, he claiming it to hold the position in yellows which Ivory does in whites. He has been cutting Viviani-Morel for two weeks. The blooms are superb. A promising white sport has appeared on one of the plants of this variety. Dailedouze is in splendid form, but Challenge as elsewhere has lost its buds. Rust and sucking bugs have been making havoc with Golden Wedding, Harry May, Pitcher and Manda and Miss Bessie Cummings, and Mr. Cotter says convincingly that if we don't soon get something to stop the rust chrysanthemums will be dear in a year or two. He grows the old Mrs. Humphreys as a white to come in after Ivory, and Pelican he grows in quantity as the very latest white. Cullingfordii always comes in right for the Harvard foot ball game, which takes place just before Thanksgiving. Mr. Cotter pronounced Viviani-Morel the best selling variety this season up to date. After the inspection of the greenhouses the company repaired to the residence of Mr. Whitten, where they were hospitably entertained, and a couple of hours spent in pleasant social intercourse, Mr. J. G. Barker, chairman of the garden committee, presiding, and J. H. Woodford serving satisfactorily as carver.

The regular monthly meeting of the Gardeners' and Florists' Club which was held at Horticultural Hall derived especial interest from the election of officers for 1895, which took place at that time. The vote resulted as follows: President, William H. Elliott; vice-president, Robert Farquhar; treasurer, Edward Hatch; secretary, Frank J. Walsh; executive committee, Thomas Grey, Charles Sander, Warren Ewell and Kenneth Finlayson. The approaching visit of the American Carnation Society to Boston came up for consideration and a committee consisting of the president, L. H. Foster, M. H. Norton, Lawrence Cotter, W. J. Stewart and Samuel Neil was appointed to formulate a plan for the entertainment of the visitors and make report at the December meeting. There was a disposition manifest throughout the evening to have fun at the expense of the president, Welch, who found considerable difficulty in keeping track of the various contradictory motions, formal and informal hallots, with which he was bombarded. The by-laws had to be appealed to frequently, and even Webster's Dictionary had to come into use to settle a knotty problem, but everything was good natured and nobody lost his temper.

Mr. C. M. Atkinson showed a well bloomed plant of *Vanda Sanderiana* at Horticultural Hall last Saturday.

New York.

Conditions have been very unfavorable for the cut flower trade. The effect of the blockade of chrysanthemums and other flowers usual at this season has been accentuated by the prevalence last week of several days of stormy weather. Stormy, but warm; such weather as keeps people indoors, prevents the street men from opening up their stands and yet has but little retarding effect on the crop of bloom in the greenhouses. So the refrigerators have been piled up with flower boxes which it would be useless to unpack, as nobody wanted stock. Chrysanthemums, roses and carnations were all carried over from one day to another,

and even violets were heaped up with the rest.

At present writing the situation is slightly better, but it is not expected that permanent improvement will set in until after the chrysanthemum shows are over at least. Many growers are shifting around from one commission man to another, and this helps to make the unsettled condition of affairs more unsettled. Retail florists in the fashionable residential part of the city complain that a larger number than usual of their regular customers are away. Each year the city season seems to end earlier in the spring and begin later in the fall.

Three or four days of rainy weather last week seems to have affected the color of roses to a considerable extent. Bridesmaids and Cusins got very pale, and that the texture of petals and foliage was soft was evidenced by the scorched edges resulting from the following day of bright sunshine. Watteville is a peculiarly delicate rose in this respect and shows the effects of sudden changes in the weather very quickly. The production of this rose for the New York market has decreased materially from last year. Ernst Asmus is about the only grower left who is running it to any extent, and he is doing it beautifully. Quite a number of Cusins are coming in with pale foliage, suffering apparently from an insufficient supply of the green coloring principle. Large growers who have watched these things say that this trouble generally appears soon after the application of liquid manure, and that all roses are more or less liable to it, but that Cusin seems the most susceptible.

Chrysanthemums are finer every day, as the midseason varieties gradually take the place of the early bloomers. Mrs. J. N. Gerard, which was so abundant at this season last year, seems to have been very generally abandoned. It has a bad habit of dropping its petals, the outside ones letting go before the center is fully developed, but one cannot fail to admire this variety as seen in the grand blooms being brought in from the estate of Wm. Bennett. A yellow which is making a fine record for itself this season is Minerva. E. C. Horan is receiving it in quantity, and every bloom is a specimen.

The entire front of Thos. Young's new establishment on 28th street has been painted pure white. This led one of an admiring sidewalk quartette to suggest that this was intended to be symbolical of the fact that customers would be treated like white men, whereat Johnnie Weir cocked his weather eye to an angle of 90 degrees, pulled his hat down over the other optic, and left to seek solace in the company of patient Tierney, the syndicate teamster.

Ed. Butler, the prosperous, but conservative Broadway florist, has "wheeled" into line with his ambitious competitors, and now sports a fine wagon, formerly the property of the defunct firm of McConnell & Grimshaw, whose effects were sold at auction by the sheriff a few days since.

John Kreshover, formerly in the employ of August Rolker & Sons, has opened a florists' supply establishment at 193 Greenwich street.

In town: Robert Kift and Wm. K. Harris of Philadelphia, each on business bent.

MR. EDWARD SHUTTLEWORTH will in future represent Hugh Low & Co. in America, Mr. Ingram being no longer connected with the firm.

Philadelphia.

Business has improved somewhat the past week and flowers are selling a little faster, but it would seem as if the supply augmented by the immense quantity of chrysanthemums now coming in was more than keeping pace with the demand. There are far more than enough roses, more than enough carnations, and more than enough chrysanthemums coming into town each day than could be used if business was twice the volume that it is. Prices hold up very well considering the competition, and growers generally express themselves as being fairly well satisfied. Beauties are now \$1.50 to \$2 per dozen, large teas \$3 to \$4 per hundred, smaller roses \$2, good count. The quality of the stock is good. Bridesmaid sells slowly, as the color is not right as yet, being too dark. Carnations are very fine for the season, Daybreaks now being as good as they were when at their best last winter; there seems to be a great quantity of this variety about. Wm. Scott has been planted by several of the growers and is very well liked. All the standard varieties are to be had in quantity and the quality in most cases is A1; \$1 to \$1.50 is the price asked for good flowers.

Chrysanthemums are everywhere, on the pavement, in the window, in the ice box, on the floors and piled up on the counter, and still the growers crowd the stores and urge the sale of their stock. The best sellers now are Ivory, Whilldin, Ada Spaulding, Vivian-Morel, Mrs. Bullock and fine specimen blooms of Sunderbruch, Lippincott, Mutual Friend and Niveus. Good prices and quality fit together as a matter of course; from \$3 to \$12 per hundred is asked for the smaller stock, while the specimens sell for \$2 to \$3 per dozen.

There are plenty of good plants in pots, Becker having a very large lot of excellent stock which sells at from \$3.60 to \$12 per dozen. Harris has also a good stock, while Wecke of 6th and Somerset streets has them by the thousand in good shape. House plants have had a little boom and all this class of stock is selling quite freely.

The meeting of the club last Tuesday evening was well attended; the following gentlemen were elected to membership: George Glencil, Chestnut Hill; C. G. Grubb and H. B. Jones of Wilmington, and F. Le Gerse, Wm. Lynch of Phila. In the absence of Mr. John Curwen Jr. on account of the Wayne chrysanthemum show, in which he is very much interested, his paper on landscape gardening was not read, but will be at next meeting.

A question box was opened. "How to get rid of crape pullers" was the first discovered and immediately "Rough on Rats" was suggested. Mr. Baker in answer to a request said he would not sell to these gentry, if those who wanted to be pulled would buy his stock, but as he had flowers consigned to him to sell money held out was a great inducement even if offered by a crape puller, and he very rarely refused it.

"What will be the most popular pink carnation this winter" brought out a number of opinions. Wm. Scott was thought very well of, but it was not to be had as yet in sufficient quantity to make a test. Daybreak, Mr. Battles said, was in good demand with him, and Mr. Cartledge spoke of good old Grace Wilder being called for as much with them as any other pink. Mr. Herr thought Wm. Scott was going to be a leading variety.

"Has the chrysanthemum met its Waterloo?" was discussed quite freely and the general consensus of opinion seemed to be

that the "mums" were all right and still had a future. Messrs. Cartledge, Battles, Graham and Kift said that fine blooms sold very well and a good price could be obtained for them.

On the president's desk were two blooms of a truly magnificent chrysanthemum, a new variety raised and exhibited by Hugh Graham. It is a large globular white with a strong lemon tint, giving the flower in daytime a most beautiful appearance. This variety is entirely distinct from any other flower, in shape it resembles somewhat a very large Ivory, the flower is a perfect sphere, the petals incurving and seeming to be stacked as it were over one another from the center of the flower gradually down to the stem underneath; they are not laid perfectly straight but have a diagonal irregular look which adds greatly to the grace and beauty of the flower. Each petal is white and quite broad with a distinct lemon colored pointed tip and a slight tinge of the same color part way down the outside of the petal. This coloring gives the flower a very distinct and beautiful appearance. Its habit of growth is all that can be desired. Mr. Lonsdale in speaking of chrysanthemums said as he took one of these flowers in his hand, "This is the finest thing in a chrysanthemum I have ever seen." Mr. Graham said that he would send blooms of this variety to all the large exhibitions, so that all growers could form their own opinion of it. He has also sent some blooms to be exhibited at the Royal Aquarium in London at the show there on November 6. Mr. Lonsdale also spoke very well of Minerva, Mutual Friend and Marie Louise and thought they were good commercially.

The annual chrysanthemum dinner will be held on Wednesday, November 7, at the Hotel Metropole, opposite the Academy of Music. All visitors should try to make it convenient to visit the show on that day and stay to dinner. Mr. Farson waxed eloquent when called on to speak of the entries for the show and predicted a really magnificent display, saying it would far surpass all previous exhibitions in many respects.

We learn that the supply of Adiantum Farlyense at Dreer's nurseries is far from being depleted and that they stand ready to take several orders of five hundred and still have a few left. Of other varieties of ferns they have something over a half million in sight. K.

Chicago.

Although the chrysanthemum is much in evidence everywhere, from the display in the window of the swell florists on the avenue to the humble fakir's stand, yet there is no glut of the real silk-edge quality. Of course the poorer grades, by far the most numerous, are decidedly not in it. Fairly well grown stock too is very abundant and this class also, though not as yet very badly overstocked, is moving rather slowly and at prices not very remunerating to the grower. A very fair quality of blooms such as a few years ago were classed as A1 here in the west can be bought at from 6 to 8. In first-class stock Mrs. E. G. Hill still takes the lead. Some good Vivian-Morel have made their appearance, meeting with good demand. Mrs. M. W. Redfield is also received freely and is a fairly good seller. One of the most popular sorts in this line is W. N. Rudd, a pink that is hard to beat. In yellow the market is largely confined as yet to Whilldin and Gloriosum; the few Golden Queen grown around here are pretty well cut, and more is the pity, as

this variety is proving one of the very best market sorts. In whites Ivory is at its best. The Queen is coming in, but not as finely grown as this sort is capable of. Minnie Wanamaker is in and to judge by its appearance is one of the sorts that can hardly be spared as a good market variety. Domination is also good.

The rose market is not as badly overstocked as last week; the wet and cloudy weather which prevailed for part of the week had the effect of considerably shortening up the supply; in consequence prices rule a little more firm. Some large shipments made to northern points helped considerably to ease the market. Speaking of shipping orders it is worthy of note that business in this direction is constantly improving on large orders, though the prices at which stock is shipped out is very low, but then it greatly relieves our home market of an overstock, which is a point the grower must bear in mind when he scrutinizes the figures of certain returns.

The supply in carnations too has been shortened, and although prices have not recovered to the figures quoted three weeks ago still they have improved slightly. Violets are abundant and in quality much improved. Prices of medium grades stationary, the best going as high as \$1.25 per 100.

Quite a number of important changes have taken place in wholesale circles. Corbrey & McKellar have dissolved partnership, Mr. Chas. McKellar retiring and Mr. T. J. Corbrey continuing business at the old stand. The Niles Center Floral Co. has been reorganized. Part of the stock in the company has changed hands, and the business will continue at the present quarters at the Cut Flower Exchange under the management of W. E. Lynch, formerly connected with E. H. Hunt.

Mrs. Rockafellow has given up her stand at the Exchange.

C. Ehrhardt and Schram Bros., both of Park Ridge, will take a stand in the Exchange next week.

Recent visitors: Lincoln Pierson, secretary of the Lord & Burnham Co.; Lewis Ullrich, Tiffin, O.

It is now a question of securing space at the chrysanthemum show. It will be necessary to utilize the galleries for the cut flower display in order to give room on the lower floor for the plants. The dailies have been very liberal with advance notices and no previous exhibition held here has had so much advance notice. All that is now needed is favorable weather to make the show a success from every point of view.

W. L. Palinsky has opened a cut flower store at 922 West 21st street.

St. Louis.

The heavy receipts of roses that were coming in last week have decreased owing to cooler weather; the market for them does not improve, however, owing to the increased crop of chrysanthemums. There are quantities of the latter being received and of all conditions from prize blooms down to southern grown stock, and prices are as various as can be. The best bring 25 cents each, and the worst generally bring a loss to the shipper. Trade is improving steadily, however; the advent of the shipping orders is becoming marked, and has the effect of lightening the market. Beauties are about the only stock that is in short supply, the best selling at \$3 per dozen.

In my trip among the florists recently Mr. Fillmore was called on and found as busy as usual; he was just about finish-

ing up the season's painting, being a great believer in that article, and as a proof showed sash that have been in use twelve years on greenhouse roofs, and are still in good condition. His "mums" are in good shape, there being some fine ones in 8 and 10-inch pots for the show; the majority, however, are in 6-inch pots and grown for market sales. The large house of carnations is looking well, Uncle John being noted for its large size thus early in the season. A bench of McGowans that have been started three weeks were well worth a trip to see, being strong and cov- with flower shoots. The roses were doing well, Wootton being exceptionally strong and vigorous. Subrosa Frank has his eye on the first prize for vase of Woottons at the show, and the Perles not far behind them. Lillums are grown more extensively than ever before, they having proved a good thing last season, and this year are about doubled. The general stock was looking in good shape; the only thing that caused any kicking were the snails, and they were too small to be harmed by it.

Mr. Meyers' place may fitly be called a chrysanthemum factory, to judge by its present appearance, there being house after house devoted to the Queen. Mr. Myers' trade is principally in market plants and he finds chrysanthemum plants an excellent thing to fill the houses with after spring sales are over. They are mostly in 6 and 8-inch pots; some, however, that were selected at the last potting and kept moving have made very creditable show stock. The first house visited was entirely of yellow varieties, Gloriosum and Whilldin predominating. The next house was entirely in whites, Canning, Jessica and Ivory being the favorites; the above five varieties are the principal ones grown, they having proved all that was required for market plants. A few nice standards were noted, not extra large, but sturdy enough to hold up their flowers without much tying, as a standard should.

Mignorette was met with in all possible places, every available corner being packed full of it, and in all possible sizes from the seed pan up to the plant ready for cutting. Quantities of it are grown, it being found very convenient to follow the chrysanthemum, just as the chrysanthemums succeed the spring stock. In speaking of the method of growing the mignorette and keeping it free from all insect pests, Mr. Myers has found that an application of a weak solution of Paris green about once every week or ten days will do the work nicely. The moths seem to recognize the fact that the plants are protected, and are seldom seen anywhere near them.

Quite a few hybrids are grown in pots for spring sales, principally Jacks and Brunners. Just at present there is the finest and most uniform batch of hybrids in 2-inch pots it has ever been my privilege to see; they were placed in the sand about the 1st of September, and have come through with scarcely the loss of a cutting. The cuttings were made from indoor grown wood, which was in prime condition when used. Carnations are grown in pots for market plants quite extensively; a striking difference in the appearance of two batches of the same variety led to the explanation that they had been grown in different localities, one batch in natural soil, and the other in made ground. The natural soil plants were as strong and sturdy as one could wish to see, while those from the filled ground were long and lanky, and would never make good plants.

Mr. Aue, late of the firm of Bruenig & Aue, is having three short-span-to-the-south houses erected for himself at Lindenwood; two will be devoted to carnations, and the third to roses.

Mr. A. E. Anderson of Thompson, Anderson & Kennedy had the ends of the two middle fingers of his left hand taken off while running a rabbling machine one evening last week. R. F. T.

Buffalo.

More beautiful weather than we have had the past three weeks could not be prayed for, and autumn leaves and bronze "mums" are all the rage. I don't mean that the bronze are especial favorites over yellow, white and pink, but it matters not what shade of chrysanthemums you choose; they all harmonize with nature's autumn tints. The "Queen" is here and in such quantity and excellence that she is likely to be politely and expensively entertained for the next month. As Grove Cle—I mean Rawson said "hurrah for the chrysanthemum." It comes as an oasis in the Sahara of a florist's annual existence, although it's a paradox to associate any part of a florist's life with a desert, yet the majority have more of the desert than the desert. But is it not true that when these wonderful flowers open out their beauty, it creates an enthusiasm with you as well as your customers? It sets them talking about the wonderful flowers they saw here and there. It takes a man's mind away from such sordid things as business and politics for a time at least. It's a blessing all round. Of course "mums" occupy the leading place in every window, as well as occupying the important part of every florist's brain power, be that made power ever so small. You will be overdone for the next six weeks with "mum" talk so I won't inflict any great amount on you. In my opinion they are holding their own in good style and show not the slightest indication of waning in popular favor. The varieties that are grown here in best form are Whilldin, Ivory, The Queen, Niveus, Mrs. J. Gardiner, Viviard-Morel, Domination and several others. A few more days will see many more of the good varieties open out. I want to tell your readers that of all the beautiful flowers both for size habit and color there is no chrysanthemum better than Maud Dean. It is a gem of the first water; very like Mermaid, only far better in all respects. A few extra fine flowers have sold as high as \$3 per dozen; they were not grown here. The people want a very limited number at that price. From \$1.50 to \$4 is the figure at which the bulk of the flowers will be sold.

Carnations are coming in more plentifully every day and greatly improves with quantity. There are almost too many roses now and only the very best quality bring a profitable price. When "mums" are gone it will be different. The sweet little violet is likely to be overdone. In every direction I see them doing finely and there will be many more grown in this neighborhood than can be sold.

An event that caused quite a ripple of excitement this week was the marriage of Mr. Wood, son of Mr. E. M. Wood of Natick, Mass., to one of our Buffalo belles. The decorations at the church and at the parlors of the beautiful Niagara Hotel, where the reception was held, were in charge of Wm. Scott, but Mr. Wood brought his own chrysanthemums and roses. Good gracious what flowers! Mr. Wood, Jr., had told us that his flowers would be three times as large as ours; he was at that moment looking at a 9-inch "Queen." We said

nothing; we only pitied him, but he came nearer the truth than we had any idea of. Such flowers were never seen here before. An illustration of their size may be gained from the following incident. A man came in to collect an ice bill. The clerk said "Mr. S. isn't in." He was in but entirely obscured by the flower and foliage of a "Mutual Friend." It was a great pleasure to the writer as well as to many others to meet Mr. Wood, both father and son, for like most all of the Boston men they are as clever and entertaining as they are unassuming.

Mr. Harry Bunyard has been here, only a complimentary call, he has dedicated to your correspondent a beautiful poem which I trust will be published in the horticultural press, for some of the verses are decidedly brilliant. Rhyme springs from "Arry" in copious quantities; it there should ever be a Poet Laureate appointed to the S. A. F. he ought to get the job with the same salary as the president.

Mr. Wm. J. Crowe of Utica and his pretty little wife has been to see us. We believe he enjoyed his brief visit here very much, as we did his company. He is an enthusiast in the business, and made of the material which climbs to the top.

I regret very much to have to say that Mr. E. I. Mepsted has been very dangerously ill. There is at this hour good hopes of his recovery. We want him to get well this time anyway, because we should miss him at Pittsburg when we roll "for them ere cups."

W. S.

Elmira, N. Y.

RAWSON'S CHRYSANTHEMUM DISPLAY, OCTOBER 29.

Bright weather brings out a large concourse of interested people to view the flower show; that speaks for itself—a tremendous Japanese army, a glittering solid phalanx, with a few Chinese strongholds in the background. The big lot of "mums" comprised a large assortment of new and old varieties, and all classes were well represented, giving one a good opportunity to judge comparative excellence. Those varieties fully done at this date (October 29) are as follows, diameter given is measured from top of petal over across the flower:

	Inches		Inches
Mrs. E. D. Adams	17	Mrs. Bullock	15
Waban	17	Chas. Davis	14
Niveus	14	Queen	13
Mrs. C. Lippencott	12	Ivory	12
Clinton Chalfant	12	Miss M. Redfield	10
Good Gracious	14	Golden Gate	14
Hicks Arnold	14	Mrs. J. N. Gerard	12
Mrs. E. G. Hill	12	Lillian Russell	14
Jessica	14	Anna A. Sturgis	10
Puritan	10	Jos. H. White	10
Belle Poitevine	10	White Boehmer	15
Louis Boehmer	12	Wm. Falconer	12
Ed. Hatch	14	Golden Queen	12
Golden Wedding	12	Armida	11
Martha Duryea	12	Troubadour	10
G. W. Childs	10	Mme. Therese Rey	10
Mabel Simpkins	12	G. P. Rawson	11
Mrs. Irving Clark	12	Col. W. B. Smith	14
I. C. Price	13	J. H. Taylor	11
Marie Ward	12	Vivian-Morel	14

and other good blooms not fully done, and a novel collection of oddities, especially useful for attracting attention. Of course pot plants and standards were represented and the novice would get a correct idea how to best grow the "mum" to advantage—not to be obtained in an exhibition hall.

Chrysanthemum still retains its hold on the general public as well as connoisseurs. The local papers were enthusiastic, visitors ecstatic, and when it comes down to business the account of sales speaks for itself.

A florist is something like an artist—reputation is a strong point in his favor, quite a desideratum in fact. But when

once secured it is comparatively easy sailing. Maintain a high order of excellence and you needn't worry about tariff measures or general politics. Simply stick to business and keep your eye on the main chance.

G. P. R.

Indianapolis.

Trade for October has been better than expected. The beginning of the month all flowers were scarce, now all are plentiful, especially roses, Perles, Mermets and others are a drug on the market. Chrysanthemums are more than plentiful. A sign in a local florist's window reads, "10 cents each, 3 for 25 cents" meaning very fair E. G. Hills. This chrysanthemum is plentiful everywhere; everybody is stocked up with it. Good yellow ones are yet scarce, white are plentiful. Through the starting up of so many small places in this neighborhood, the market is stocked with surplus roses, carnations and chrysanthemums. The first Harrisii lily came in this week; earliest on record around here.

The prospects for the coming exhibition are very flattering; the public seems to take more than usual interest in the chrysanthemum. The reception committee has arranged for an entertainment in the local club rooms Thursday evening. The Huntington Seed Co. invites all florists and others visiting Indianapolis during the week to an elaborate banquet at the Commercial Club Restaurant Wednesday evening. The committee will also have buggies and carriages on hand to take visiting florists all over the city. All are welcome. All we hope for now is good, cool crisp weather.

W. B.

Kansas City, Mo.

During the past week business has been extremely poor; in the retail stores the windows and ice boxes are filled up with good stock, for which there is no demand. Among chrysanthemums Jessica, Glorioso and Mrs. E. G. Hill are being cut, but unfortunately the latter is very little grown.

C. S. Smith of Kansas City, Kas., has done considerable building, and now has four houses, 20x65, 18x65, 12x65 and 7x65 respectively. He reports business as very slow.

Recent visitors: A. L. Vaughan, representing J. C. Vaughan, Chicago; J. H. Weeks, Liberty, Mo. Mr. Weeks has just completed three new houses, one 20x60 and two 11x80, heated by steam.

S. M.

The American Corn Journal, Sibley, Illinois, a monthly periodical, will commence publication January 1.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SPECIMEN BLOOMS

selected and shipped
to order.

Carefully Packed.

The flower buyer of to-day wants up-to-date goods.

You cannot put him off with the varieties or the styles of 5 or 10 years ago.

If you try it you will lose your customer, and your competitor will get the benefit.

DID IT EVER OCCUR TO YOU?

There are Roses and Carnations to-day of a quality not dreamt of five years ago.

There are Chrysanthemums as far ahead of last year's stock as last year was ahead of its predecessors.

These are the goods your customers want, and this is the stock you will have if you are progressive.

WE CAN SUPPLY YOU.

A list of the growers whose productions we handle exclusively would astonish you.

They are famous the country over. They are progressive. There is nothing worth having that they cannot supply in quantity.

AT OUR NEW ESTABLISHMENT EVERY IMPROVEMENT THAT LONG EXPERIENCE CAN SUGGEST FOR THE CARE OF FLOWERS AND THE TRANSACTION OF AN EXTENSIVE BUSINESS HAS BEEN SECURED.

Address THE AMERICAN FLORIST CO., Chicago.

HORTICULTURAL INSTRUCTION.—A 12 weeks' course of instruction in horticulture, supplemented by lectures on allied subjects, as chemistry of plant life, soils, fertilizers, economic entomology, botany, etc., is offered by the Pennsylvania State College, at State College, Pa., intended for students who find it impossible to pursue a full college course of four years. It extends through the months of January, February and March. While such a brief course cannot make an accomplished horticulturist it will incite a young man to more careful observation and intelligence in the cultivation of plants.

SOME FINE VIOLETS from Henry Diers of the Burr Oak Nursery, Sibley, Ill., were recently received at this office. Mr. Diers, who makes a specialty of ferns and violets, grows the latter entirely in solid beds, and is very successful with them.

THE AMERICAN FLORIST (\$1.00) and Gardening (\$2.00) together to one address for one year for \$2.50. Send orders to American Florist Co.

IF YOU have anything to offer to the trade send an adv. for our special chrysanthemum number to be issued next week.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

The Onion Seed Situation.

The onion seed situation continues to be of general interest to the trade. The indicator hand seems to flutter about as wildly over the price dial as it did a week since, though there is little doubt that it is harder to get a firm offer on Wethersfield than any other item of the list and rates mentioned—not sales—vary from \$1.30 to 1.75.

We give below two more replies to our former inquiry:

William Meggat says:

"I am under the impression that the stimulant referred to in your last week's editorial is in part fictitious, and cannot get rid of that idea. I acknowledge that the crop is light, but the breadth planted was immense, and if there had been a full crop it would not have been worth 25 cents; with half a crop it may bring from \$1 to \$1.25 for Red and Yellow. If the price is put higher than that this fall it will be worth less next March. This is not a year when anything will bring boom prices, and if Red is short Yellow will be planted. Every year there is more Yellow and less Red planted. Fifteen years ago there were not over 400 acres of onion seed planted in the United States. This season there must have been 1,400 acres with what seed was carried over and allow half a crop for 1894. I say there is enough to go around at reasonable prices, even allowed for all the increased demand in that 15 years. When onion seed goes over 75 cents the commission box men cannot afford to paper it, and if they put only 20 papers of onion into a box instead of 40 or 50 papers that will make a difference of from 50,000 to 75,000 pounds which is thrown on the market and breaks it down. When onion is worth over 75 cents the box men lose money on every paper they put up. Onion has been reasonable for the past two years, and was papered by the box men freely. If they reduce the contents of the boxes to about the amount returned in them this year that will enable them to clean it out next spring. A short crop next year would be another tunc to dance to, but this year they can beat high prices in my humble opinion by selling their seed at wholesale."

Schlegel & Fottler say:

"We say amen to all of your article of the 20th. Extreme drouth has cut the yield down very considerably."

TO THE AMERICAN FLORIST:—Believing that all reliable seed houses will be anxious to realize as good a profit as possible the coming season, and learning by past experience that low prices will result in great injury to the trade, we would like to know if you could not through your columns bring out an expression from the seedsmen that will lead to a uniform listing of all the leading varieties of vegetables, particularly the varieties that are going to be a short crop, such as onions, peas, beans, sweet corn, etc., and not think by cutting the price that they will do all the business. It is the opinion of the writer that at fair prices each one will do his respective share of business, and when the season is over will have more to show for his hard labor.

Indianapolis. J. F. HUNTINGTON.

NASTURTIUM SEED is again likely to be in demand.

VISITING NEW YORK: George Crosman of Rochester.

E. B. DICKS of Cooper, Taber & Co., London, sailed for home per steamer Umbria on October 27.

THE Northrup, Braslan & Goodwin Co. have issued a preliminary trade list dated November 1, good ten days.

VISITED CHICAGO: J. F. Huntington, A. H. Goodwin, E. Schaettel, R. H. Shumway, J. T. Buckbee, R. C. Steele.

J. M. THORBURN & Co. have issued a preliminary price list in which they quote Red Wethersfield at \$1.10. It is understood, however, that it is supplied only when included in general orders with other items.

THEO. PABST died in New York, October 24 at 5.30 p. m., and was buried on Saturday the 27th. His disease was inflammation of the bowels. He had been American agent for Vilmorin, Andrieux & Co., Paris, for over 30 years.

News Notes.

LA CROSSE, Wis.—B. Beyer is out of business here.

FLINT, MICH.—D. P. Smith has added a new house 70x40.

AUSTIN, MINN.—A. N. Kinsman & Co. have made a 16x18 addition to their plant.

EAST NORWALK, CONN.—Harry W. Hoyt has just started in the florist business here.

E. GLOUCESTER, MASS.—John F. Wenson is building a greenhouse, and will enter the trade.

SUPERIOR, Wis.—P. F. Fowlers, of Fond du Lac, was recently here looking for land with which to start a nursery.

YPSILANTI, MICH.—Mr. and Mrs. Wm. Beech are adding a new house 20x60 for decorative plants. They expect to soon add still more glass.

EASTON, PA.—Joseph Schrank, the florist, died very suddenly of heart disease, September 20, aged 54 years. He was born in Germany, coming to America 20 years ago.

CEDAR RAPIDS, IA—W. Waterhouse suffered serious and painful injury of his face from a collision with projecting boards from a load of lumber last week. He is now improving.

NEVADA, MO.—Henry Roeskey, late foreman of the Patterson greenhouses at Ft. Scott, Kans., now has charge of C. W. Talbot's place here. The chrysanthemum fair will be held November 14 to 17.

BELMONT, CAL.—McLellan Bros. have built two houses 18x50 three-quarter span, and a lean-to 6½x50. Another florist in this vicinity is erecting a three-quarter span house 40x18 with the long span to the west. This is for cut flower growing.

MONONGAHELA, PA.—The *Daily Republican* of September 25 gives an excellent illustrated article descriptive of the establishment of Mr. I. Shelby Crall, the florist and gardener. From it we learn that Mr. Crall has 45,000 square feet of glass and 40 acres of land.

COUNCIL BLUFFS, IOWA.—The partnership heretofore existing between J. R. McPherson and Robt. F. Rain under the name of the Elm Park Floral Co. has been dissolved, Mr. Rain retiring, while Mr. McPherson continues in business. The firm had 7 houses 20x100, and Mr. McPherson is now building more.

MIDDLETOWN, N. Y.—Gray Bros. are completing two greenhouses, one 50x8 and the other 50x13. They purpose building four others, each 50x12, for forcing vegetables. They will be all connected and form a compact range of glass with large potting house and office at-

tached, with cellar for storage purposes, and boiler room. The heating to be by steam.

The Hose Mender Man Comes to Grief.

J. J. Van Julay has been held at Cleveland, O., on a charge of swindling, and the prosecuting attorney says he has no doubt of conviction with the evidence in hand. M.

News Notes.

BUTTE, MONT.—Mitchell & Cobban have succeeded Mrs. Knox.

DES MOINES, IA.—The 29th annual meeting of the Iowa State Hort. Society will be held in the Cycling Club Hall, near the Savery House, this city, December 11 to 14.

LOUISVILLE, KY.—The florists of this city have organized the Kentucky Florists' Society with officers as follows: J. Schulz, president; E. Marrett, vice-president; Henry Nanz, secretary; J. W. Thompson, treasurer. S. J. Thompson has been appointed manager of the chrysanthemum show to be held November 6 to 10. The society will have a banquet November 8.

WICHITA, KANS.—A chrysanthemum show will be held here November 13 to 16 by the Wichita Florists' Club. The officers of the club are Chas. P. Mueller, president; Mrs. J. W. Wingard, vice-president; W. H. Culp, secretary; F. Keuchmeister, treasurer. C. A. Rose will be general superintendent of the exhibition. The premium list has been printed and copies may be had on application to the secretary.

MILWAUKEE, WIS.—The souvenir programme for the chrysanthemum show has been issued. The music will be by the Philharmonic Orchestra and the programme is a very attractive one. It includes "The Milwaukee Florists' March," composed by Mr. Julius Klokner. Copies of the programme and premium list may be had by addressing the secretary of the Milwaukee Florists' Club, Mr. A. Klokner, 930 Grand avenue. The judges at the show will be Messrs. C. B. Whitnall, J. A. Pettigrew and C. L. Mann.

ERIE, PA.—We shall have a chrysanthemum show after all. The decision to go ahead comes late but we have the material for a good show. The dates selected are November 7 to 10 inclusive. H. Tong, G. Schluraff and E. Newburger constitute the committee in charge, and to whom requests for further information should be addressed. The following florists have been building this year, in addition to what you have already published: G. Schluraff 3 houses, Titus Berst 5 houses, J. Trost 1 house, and H. Tong, manager Massasauga Gardens, one large palm house for specimen palms.

News Notes.

SOUTH HAVEN, MICH.—J. W. Hicks has bought out Theodore Mikkelsen.

RACINE, WIS.—J. Benstead has gone into the business here, putting up two houses, each 70x16.

COLUMBUS, O.—The park board is considering bids for the erection of a conservatory in Franklin Park.

INDIANAPOLIS, IND.—R. F. Harritt has gone into business here, having put up 2 houses at 469 Virginia avenue.

NASSAU, N. Y.—Articles of incorporation of the Rensselaer County Agricultural and Horticultural Society have been filed.

BELLEFONTE, PA.—Geo. Baldwin, late head gardener at Penn. State College botanical garden; has opened a florist store here.

SPRINGDALE, ARK.—The second annual meeting of the Arkansas State Horticultural Society was held here October 16, 17 and 18.

MILLBROOK, N. Y.—W. C. Lester has taken H. J. Smith in partnership, and the firm will do business under the title Lester & Smith.

BLACK RIVER, WIS.—The Henry Lake Sons Company, nurserymen and florists, has been incorporated with a capital stock of \$10,000. The incorporators are Henry, Robert P. and Alex H. Lake.

MANCHESTER, N. H.—The New Hampshire Horticultural Society held its first exhibition here October 11. It was essentially a fruit exhibition, the display being very creditable, particularly in apples and pears. Plants and flowers were but sparingly represented, L. B. Schwartz of Manchester making the largest and best display, both in plants and cut flowers.

SPRINGFIELD, ILL.—Miss Belle Miller is the progressive lady florist of this city and in addition to her already fine establishment has erected this summer a new rose house 180x14; also a new and commodious office 28x24. Miss Miller is a grower of roses and carnations only and leaves the plant trade entirely alone. The stock would do credit to many florists of the sterner sex.

GAINESVILLE, TEX.—H. Kaden is adding a new house 18x90. His greenhouses recently barely escaped destruction by fire. The barn, stable and wagon shed, located only a short distance from the houses, were set afire by lightning. The barn and contents, 7 tons of hay, 60 straw mats, etc. were destroyed. A heavy rain at the time and the wind blowing away from the greenhouses was all that saved them. There was no insurance on the barn.

WILLIAMSPORT, PA.—Evenden Bros. have recently added two more houses to their establishment, one a ¾-span 16x110 and the other a short span to the south 14x110. They are for carnations and chrysanthemums. This addition gives them about 40,000 feet of glass, exclusive of hotbeds and cold frames. They have also enlarged their store on East Third street. Their roses and carnations are in prime health and growing vigorously while their chrysanthemums, both in beds and pots, are all that could be desired, especially the latter, which are stocky well grown plants.

Baltimore.

The last club meeting was well attended and most of the members could give a very good reason for being there, for the question of postponing the show was to be settled once for all, and, while very few cared to make themselves conspicuous by trying to induce an action that might be disastrous, yet there was a great deal of an uneasy feeling that it might be the best thing to do after all. Baltimore is blessed with several extra and popular amusements during the same week the show is set for, besides the stock attractions of theaters, etc; for the "haut ton" there will be the great horse show, the like of which never was seen before in size and advertising; then to catch the flower lovers, the rival show of Mr. John Donn; and last, even our staunchest supporters, the church people are to be drawn away by a great revival conducted by Mr. Booth of Salvation Army fame. As if this were not enough some of the members who have great plants declared the buds would not be half open by the time set, and the committee said that as every other show every where to be held during the same week they would have great difficulty in securing judges. It is to be hoped no one will ever think the Baltimore Gardeners Club deficient in courage, when, in the face of all these dangers from within and without, they decided to stand to their guns and hang their banners from the outer walls; i. e. to hold the show at the time set, and to hold a grand one; so all our friends are expected to drop in from November 5 to 10 inclusive and see if we are not abreast of the times. Fisher & Ekas exhibited a bloom from a seedling of this year, incurved canary yellow, delicately penciled with red on the upper side of petals, strong stem and upwards of six inches diameter.

After the exhibition committee had made arrangements for receiving and sending the flowers to Philadelphia to compete for the club premium in that city the question box was opened, and a little stack of paper taken out. Many of the questions related to the coming show, but one or two were of general interest. "What is a profitable crop to succeed chrysanthemums in the houses?" Mr. C. Hess said carnations, E. Kress thought pot roses for spring sales, W. Christie preferred pot roses, but could get a crop of lettuce off before putting in the roses. "Is lime in soil injurious to ferns?" W. Ekas said he thought it decidedly beneficial. The same gentleman answered the next question which was "Will tobacco smoke injure violets?" by saying they would stand as much as roses, but advising not to smoke the evening before picking blooms, on account of the smell clinging to them.

Mr. Chas. E. Smith has opened a store at No. 101 North Liberty street and is handling very pretty carnations and roses.

Only two special premiums this year. One member wanted to hold the show two weeks. MACK.

MANCHESTER, N. H.—The annual meeting of the New Hampshire Horticultural Society was held on the evening of October 10, and the old board of officers was re-elected. The first annual exhibition of the society was very extensive, there being shown no less than 840 plates of apples alone. The flower and plant department, while of lesser importance than the fruits and vegetables, was also successful.

Toronto.

The weather has been simply beautiful for the time of year lately—Indian summer I suppose—and has had the effect of bringing chrysanthemums on altogether too quickly for the date of the show. Early sorts will be past and over before that time, but there is no reason to doubt that there will be plenty left of the later sorts to make a good show.

Many of the boys talk of taking in the Hamilton (Ont.) show, which comes off on the 7th and 8th. Some will probably take up exhibits and endeavor to knock the pretension of the "ambitious city" into a cocked hat. The contest promises to be lively, and a good time is expected.

Florists report trade to be steadily improving, but all are praying for a good killing frost. There were some good outdoor violets on the market last Saturday. Cosmos too still holds out. For good chrysanthemum blooms 75 cents to \$1 a dozen was being asked. E.

Galt, Ont.

On the 15th inst. Mary McCulley, wife of Alex Common, florist, died rather suddenly of heart failure after an attack of pneumonia of about ten days duration. Her death is a stroke to Mr. Common and was a great surprise to her many friends whom she had endeared by her genial character. In her death he not only loses a loving wife but a valuable assistant in his business, as she devoted much of her time to it. She leaves no children. We all sympathize with him in his sad bereavement. D. McGEORGE.

SPRINGFIELD, O.—Mr. John Good, of the firm of Good & Reese, had a narrow escape from serious injury while hunting recently. While drawing a gun toward him by the barrel the trigger caught and the load was discharged up his sleeve. Fortunately he escaped serious injury though it was a very close call.

THE EXHIBITIONS.

Chicago.

Although we were denied the classic background of the Art Institute this year, the show being held in one of the armories (Battery "D"), there is no doubt of its artistic success, the whole effect being extremely charming. The primeval bareness of the ceiling and rafters was entirely obscured by ample decorations of bronzy oak leaves and pendent festoons of Florida moss. This was thoroughly in harmony with the brilliant "Queen of Autumn," far superior to the conventional hunting so often seen. The bronze oak leaves were lavishly used wherever there might be a suspicion of bareness, giving the hall a finished air. But the display was so large that it was impossible to look in any corner without seeing something of note.

The arrangement of exhibits on the main floor gave one the impression of a flower clothed valley, the taller plants being towards the sides, sloping up to the covering of oak leaves, crowned by the gallery full of cut blooms. This gave an excellent effect; there was nothing to cut off the line of vision on entering, and each large group stood out boldly at its full value. Specimen groups filled the corners, while the central groups of orchids and decorating plants stood out apart from the chrysanthemums. The chrysanthemum is never so attractive as when in company with autumn foliage alone, and there is no question that it should never be within hailing distance of an orchid; the increased effect given by the isolation of the table of orchids, with the valley of chrysanthemums stretching away on either side, emphasized this fact.

Among the decorative plants was a large oval bed of Araucaria excelsa, bordered with ferns, immediately before the entrance. These plants, exhibited by the Art Floral Co., were in the pink of condition, and made a most attractive display.

Naturally we always expect to see a finer show among cut flowers than plants, though it is but fair to say that the plants here this year were far above the average, particularly the bush or naturally grown. The single stem plants are always good, but we can not always say

this of the bushes and standards. It is invidious to make comparisons, but perhaps the most decorative arrangement in cut flowers seen on the opening day was Frank Benthey wearing a Mrs. Bayard Cutting the size of a well developed soup plate in his buttonhole. The manner in which the cyclone of pink petals nestled in the neighborhood of his beard was much admired, and caused quite a ripple of excitement among the State street shoppers, they believing that our aesthetic friend was the chrysanthemum show in person.

THE CUT FLOWERS.

The cut flowers filled the balconies, the ground floor, with but few exceptions, being taken up by the plants. As at the last show, the vases of 50 blooms, one variety, were of especial interest, including some magnificent flowers. The varieties were much the same as last year, in spite of the more recent introductions. In fact it seems as if some of last year's beauties do not show to quite such good advantage this season as last.

Naturally the vases of 50 blooms, one variety, were of special note, and it is interesting to see that the Queen, last year's winning favorite, was still in the lead; it appeared more frequently and in finer condition than any other white, and was the variety receiving first, second and third for 50 whites. Excepting where individual flowers were shown Niveus did not seem up to last year, and Mutual Friend, though fine in the plant classes, did not show to nearly so great advantage among cut flowers.

For vase of 50 blooms, white, all three prizes, first, second and third, which were taken by E. G. Hill & Co., Richmond, Ind., J. C. Vaughan, Chicago, and Fred S. Walz, Cincinnati, O., went to The Queen, which, it will be remembered, was the winner of the first prize in the same class here last year. These blooms were surpassingly fine, and from the frequency with which the variety appeared in the white classes it appears first favorite for exhibition, though others may be preferable for commercial purposes. Niveus, the wonder of two years ago, seemed relegated to the background.

For vase of 50 blooms, yellow, Fred Dorner & Son, LaFayette, Ind., were first with Major Bonnafon. These flowers were easily first, although Eugene Dailedouze shown by E. G. Hill & Co. was also excellent. But the rich yet clear yellow, perfect finish and fine foliage of Bonnafon carried off the honors, Hill taking second, and Fred S. Walz, Cincinnati, O., third with H. L. Sunderbruch.

For vase of 50 blooms, pink, Stollery Bros., Argyle Park, Ill., were first with Viviani-Morel. This variety showed up in excellent shape wherever shown, but this vase was perfection in color, form and finish. The second went to Fred S.

Walz for Mrs. Potter Palmer, which, although fine and well grown, contrasted poorly with Vivand-Morel. Third prize for pink went to Nathan Smith & Sons, Adrian, Mich.

For vase of 50 blooms, crimson, one prize only was awarded, first, to E. G. Hill & Co. The variety was John Shrimpton, a deep velvety blood-red, somewhat like Cullingfordii, but larger.

In the bronze class, 50 blooms, E. G. Hill & Co. won on two entries, taking first and second prizes, first for Joey Hill and second for Segusiana. The latter though an attractive and well finished bloom, has a russet tipped tinge which suggests fading, and seems hardly desirable on this account.

Vase of 50 blooms, any other color, first only was awarded, going to E. G. Hill for Pitcher & Manda. This variety was quite freely exhibited, and appeared very attractive to the public.

For best 25 varieties, one flower of each, first went to E. G. Hill & Co., second to Bassett & Washburn. Both were fine displays, but Hill was before his competitors both in finish and in lasting qualities of bloom.

For 12 varieties, one flower of each, first to Pitcher & Manda, Short Hills, N. J.; second to Fred Dorner & Son. Both collections included some very fine blooms. One of the most charming whites noted was Mrs. C. H. Duhme, in Dorner's collection; it is a large incurving flower, with an outer fringe of recurving guard petals, very well finished and graceful.

For collection of named varieties, one flower of each, not less than 40 varieties, Hill & Co. was first, J. C. Vaughan second. Hill's collection included some very choice varieties, among them Rose Wynne, a prize winning English sort, a very large, broad-petalled incurving white, Richard Dean (French), a most charming pink, Miss Georgia Bramhall, an incurving lemon yellow, of good size and beautiful shape, Chas. Davis, Challenge, Dailledouze, Golden Gate, etc.

For collection of odd and peculiar forms, not less than 25 blooms, Hill & Co. received first, the only prize awarded. It seems a pity there was not a greater display of these oddities, for they seemed very interesting to the public. The various anemone forms composed the bulk of them. There was Rider Haggard, a botanical spasm in magenta, bordered with a halo of pink tape, Amoor, a great flat whorled bronze, which showed up well among single stem plants, Nemesis, a globular pink with a quilled center, Mephisto, an incurved bronzy apricot, Whirlwind, bluish, and several floral cyclones in various tints including some of the bairy section so eccentric in hue and form that they looked as if afflicted with some eruptive disease.

For six vases, 12 flowers in a vase, Hill & Co. received first, Bassett & Washburn second, and J. C. Vaughan third, all good displays.

For vase of white, 12 flowers, first went to J. C. Vaughan, second to Hill & Co., and third to Bassett & Washburn.

For vase of yellow, 12 flowers, Bassett & Washburn took first with Eugene Dailledouze, grand flowers, equal to those which astonished us last year; second to Fred Dorner & Son for Bonnaffon, and third to Hill & Co.

Vase of pink, 12 flowers, first went to Hill & Co. for Richard Dean, a shapely pink, something in color like V. H. Hallock. The flower is globular, the petals channelled, pressed down into a little spoon-like depression near the end, which is forked into a tiny swallow tail. A

beautiful flower. Second went to J. C. Vaughan for Constellation; third to Southside Floral Co., Springfield, Ill.

Vase of crimson, 12 flowers, first prize only was awarded; it went to Hill & Co. for Fisher's Torch.

For vase of any other color, 12 flowers, Pitcher & Manda received first for variety Pitcher and Manda; Hill & Co. second for Inter-Ocean; A. M. & J. B. Murdoch, Pittsburg, Pa., third.

This completes the first day's awards for cut flowers. The flowers, in most classes, were above the usual standard though there were many surprises. It was a little surprising to see how feebly L'Enfant des Deux Mondes was represented; it appeared among single stem plants, and was found in collections of cut flowers, but where a single variety only was in competition it did not appear at all. Challenge, from which we all expected much, has not borne out its first promise; it is outclassed by several other yellows. We certainly give the palm to Bonnaffon, though Dailledouze too was fine; Mrs. C. Lippincott, though good, hardly came up to these two. Inter-Ocean in many cases seemed very pale, but it is a beauty, and showed well among the single stem plants. Chas. Davis was good, but also seemed a trifle pale in some cases, still its beautiful Vivand-Morel shape will make it a favorite with many in any case. We should like to see more of Rose Wynne; Mr. Hill expressed himself as not entirely satisfied with it yet, though it is a beauty. Richard Dean is exquisite in color and in shape. Mermaid looks a trifle coarse; so too does Ed Hatch, and the latter was very pale. Mrs. Frank Thompson, which was one of the "stars" seven or eight years ago, looked an indifferently pink bunch of shavings, compared with her younger rivals—so soon have we changed in our ideas of floral perfection. Louis Boehmer only showed in the large collections, and Mrs. Alpheus Hardy appears to be dead. We can see, more than ever, that perfection of finish and excellence of habit are looked for among present favorites, far more than size or oddity alone.

CHRYSANTHEMUM PLANTS.

The plant display was, in many respects, much better than last year. The specimen plants were certainly much better than we have seen for several years, so were the standards. The single stem plants were remarkably fine as a whole, the varieties being well chosen, and the plants well grown.

In specimens and standards the honors were pretty evenly divided between J. C. Vaughan and Bassett & Washburn. For specimen white Bassett & Washburn received both first and second prizes, J. C. Vaughan taking third. For specimen yellow J. C. Vaughan took first and third, Bassett & Washburn second. For pink specimen Bassett & Washburn took first and second, J. C. Vaughan third. For specimen crimson J. C. Vaughan was first, Bassett & Washburn second and third; specimen, any other color, the same. Specimen bronze, Bassett & Washburn first and third, Vaughan second. The competition between these two firms was very close, the plants being good in both cases, and they were well trained, being free from the torturing palisade of sticks so often noted.

But the single stem plants were the great attraction. On entering, just behind the fine bed of araucarias previously mentioned, was the winning group of 50 plants grown by Hill & Co. The eye was first caught by a block of Minerva, perfect plants, the rich golden flowers with

a strong stem well clothed with fine foliage; behind these, continuing the harmony of the yellow, a number of the golden-eyed Pitcher & Manda, backed by other varieties sloping at the opposite side, the taller Pitcher & Manda forming the middle group. The plants were of such even quality throughout that it was a pleasure to study them. Inter-Ocean showed very well in this group; Challenge, though large, was greenish and undeveloped in the center. Amoor, an odd whorled bronze, noted among the cut flower fantasies was in very good form, dwarf but large flowered. In this class second prize went to Bassett & Washburn, third to J. C. Vaughan, both these competitors making an excellent display.

In the class calling for 25 single stem plants J. C. Vaughan was first, Bassett & Washburn second, and Hill & Co. third. Among the winning plants Marie Louise, Mutual Friend, Mrs. C. D. Avery, Eda Prass, Chas. Davis, Vivand-Morel and Golden Gate were specially good.

Among the standards, which were all better than last year, Vaughan and Bassett & Washburn were the only competitors, they taking first and second in the order named for six standards. Vaughan took first for single standard for white, pink and yellow, second for white and yellow. Bassett & Washburn second and third for yellow, second for pink, and third for white. The whites (Goguac) were perhaps the best bloomed of the standards.

OTHER PLANTS.

The class calling for a general display of chrysanthemums, arranged for effect with other plants on 150 feet of space, was an important one, the prizes being respectively \$100, \$75 and \$50. There were six entries, and it may be said, in a general way, that they were better than previous displays of similar character. But still they left much to be desired. It seems as if our decorators are wedded firmly to the shingle roof idea of arrangement; each leaf must overlap its fellow. There were some arrangements which looked like a nice parti-colored terrace which had just been clipped smooth with a lawn mower. Then again there were cases where the arrangement was merely a general display of other plants with a few chrysanthemums dotted in like punctuation marks. And there was a display of gold fish and statuary, backed by palms, and brightened by upwards of a dozen chrysanthemum blooms, but these arrangements certainly could not be called "displays of chrysanthemums and other plants"—they were displays of other plants minus chrysanthemums. However, the judges manfully wrestled with these trials, and gave first to Bassett & Washburn, second to Parkside Floral Co., and third to J. C. Vaughan.

For pair of palms the prize went to H. F. Halle, for two well grown kentias; the same exhibitor received first for 6 palms, second prize going to Albert Fuchs.

For pair of decorative plants other than palms, first went to John Fuhrman, gardener to Adolph Schoeninger, Chicago, second to Parkside Floral Co. John Fuhrman received first for 6 decorative plants other than palms, his plants including a beautiful *Microlepis hirta cristata*, *Adiantum Farleyense*, *Lastrea Smithii*, *Anthurium Reynoldianum*, and crotons Prince of Wales and Queen Victoria. These plants were well grown and in fine condition. Second prize went to E. G. Uiblein, Chicago, for a group including a fine *Anthurium Veitchii*, a plant we do not very often see.

It was felt that although several of the

A CORNER AT THE CHICAGO EXHIBITION.

groups arranged for effect could not properly compete, the schedule calling for chrysanthemums arranged with other plants, still they added so much to the decoration that the judges recommended a substantial recognition be made these exhibitors. The groups consisted of palms and other decorative plants, and were arranged by the Art Floral Co., H. F. Halle, Albert Fuchs and John Fuhrman.

Of the \$125 to be awarded according to the discretion of the judges for meritorious displays not entered in any other class of the following awards were made:

To the Art Floral Co. \$25 for group of araucarias, 31 plants, in four varieties. These araucarias occupied a circular bed, carpeted with moss, and bordered with ferns and selaginellas or lycopodiums. The effect was charmingly natural, and though it is probable that but few of the general public were aware of the actual value of this exhibit, its beauty attracted all. The recognition given by the judges was amply deserved.

To E. G. Uihlein \$25 for display of orchids, and \$25 for decorative plants. Mr. Uihlein's display occupied two tables, and was always surrounded by appreciative visitors. The orchids were as

usual the great attraction. A good many cypripediums were among them, including a blooming plant of the rare and beautiful *C. Chamberlainianum*, which we believe has never been displayed in Chicago before. The charming crimson punctation of the lip, and the twisted barbate spotted sepals made the flower the most remarkable cypripede there. Some attractive forms of *C. Spicerianum* were also noted. There was a very nice *Lælia Dayana*, *Anguloa Clowesii*, *Odontoglossum grande*, *Cattleya Bowringiana*, *Oncidium ornithorynchum*, etc. The table of decorative plants was prettily arranged, and displayed some good ferns, *nepenthes*, *sonerilas*, *fittonias*, *begonias*, etc., making a very instructive exhibit.

To Bassett & Washburn \$15 for group of begonias. This included some of the showy hybrids of the Rex type, and made a metallic bank of foliage at one side of the stage.

To E. Wienhoeber & Co., Chicago, \$35 for general display of plants and cut flowers. This display, which was on the north side of the hall, consisted of a semi-circular bank of palms, in perfect condition, bordered by a table of cut flowers, fringed with *adiantum* and feathery *cocos*.

The cut flowers consisted of chrysanthemums, roses, carnations, heliotrope, violets, etc., and was refreshed day by day, being always kept in fine order. The arrangement of this display was greatly admired.

A certificate of merit was awarded to Hill & Co. for a plant of the new *canna* Queen Charlotte with three fine spikes of bloom, which the judges considered very meritorious.

A special premium was also awarded to Mrs. G. M. Pullman for a group of decorative plants. This collection coming in on the third day was not considered in competition with other displays. The central plant of the group was a stately specimen of *Sabal umbraculifera*, the tub being draped with other plants, including *Cissus discolor*. Some *latanias*, *kentias*, *rhapis*, foliage *anthuriums*, ferns, etc. filled up a very striking and stately group.

An odd conceit in cut flowers, brought in on the third day by Anthony & Curran (not for competition), was a venerable hod filled with Eugene Dailedouze chrysanthemums and bronze oak leaves. And it was really quaint and attractive—the arrangement was charming if its receptacle was so humble.

ROSES AND CARNATIONS.

The first rose competition took place on Monday, the third day of the show, and the display being large and most attractively staged. Most of the roses, like the cut chrysanthemums, were in the gallery, but Bassett & Washburn made their display on a large round table near the stage, which held their chrysanthemums earlier in the show. The arrangement of this exhibit was really beyond all praise; no one could approach it without admiration. The table cover was strewn with ferns—at one side was a long trailing spray of fragrant stephanotis. At either side were huge bunches of lily of the valley and violets. In the center tall trumpet shaped vases held American Belle and American Beauty, the lesser lights being grouped around them. The arrangement was by Mr. Andrew Benson, the grower of the flowers, and evinced so much artistic feeling that we can not help commenting on it as the ideal way to set up an exhibition display. For vase of 25 American Beauties, and the same of American Belle, Bassett & Washburn received both first and second; no thirds were offered in the rose and carnation classes. Bassett & Washburn also took first for 50 Perle des Jardins, second for Mme. Caroline Testout and La France.

Reinberg Bros., who displayed some very fine flowers, received first for Kaiserin Augusta Victoria, no second being awarded; first for 50 Brides, 50 Bridesmaids, 50 La France and 50 Meteor; second for Catherine Mermet and Perle des Jardins.

W. A. Kennedy, Lake Forest, Ill., received first for any new variety with very fine Mrs. Whitney; first for Gontier and second for Meteor and Bride.

J. M. Gasser, Cleveland, O., received first for any other variety (Mme. de Watteville) and Mme. Cusin, second for Bridesmaid. G. W. Miller, Hinsdale, received second for any other variety with Sunset.

The rose display received additional interest through the arrival of two debutantes but newly introduced to the rosarian world. One was Belle Siebrecht, exhibited by Siebrecht & Wadley, New Rochelle, N. Y.; the other Mrs. Pierpont Morgan, from John N. May, Summit, N. J. The first named is an English rose, its parentage being La France \times Lady Mary Fitzwilliam. Its color is not very far from that of Mrs. Whitney, the bud long and pointed, very shapely, the petals, as they open, showing the curling tendency of La France, though not so much as the latter. It is fragrant, with good stem and foliage, and is certainly a beautiful rose, and arrived after its long journey in the pink of condition. The judges awarded it a certificate of merit, and considered it a most valuable addition to our list of pink roses.

Mrs. Pierpont Morgan, Mr. May's new rose, must receive special interest from the fact that it is of American origin, for our rose growers have not been so active as the carnation men in the production of new varieties. It may be described as a magnified Mme. Cusin, but much deeper and of more even color, fuller petalled and when fully expanded of a cup shape. The color appears to lighten up under artificial light. Its parentage was not given. The judges regarded it as a decided acquisition, and it was awarded a special certificate of merit.

The carnation display was very good, most of the flowers showing finely. It is worth noting that Albertini seemed the greatest favorite with the general public; all were admired, but it was Albertini

Scale
one foot.

NEW CHRYSANTHEMUM CRYSTALLINA, AS SHOWN AT CHICAGO.

people pointed out to their friends, or revisited for a second look.

Among the premiums awarded August Jurgens took first for Garfield, Albertini and any other pink; second for any red other than Garfield; second for W. Scott; first for striped with Helen Keller. F. L. Pruse took first for Silver Spray, first for Portia and Tidal Wave. Stollery Bros. were first for Lizzie McGowan, second for Portia and Daybreak, first for introduction of 1894 other than red or white. Anthony & Curran were first with Uncle John. J. F. Klimmer was first for red other than Garfield; Geo. Bayer second for Lizzie McGowan and any other white, second for Tidal Wave. Albert Fuchs was first with Daybreak.

H. E. Chitty, Paterson, N. J., made a very attractive display with his new varieties mentioned in a recent issue of this paper. He received first in the class for 50 blooms any other white with Alaska, first for 25, introduction of 1894, with the same; first for red, introduction of 1894, with Corsair; second for striped and any other color, introduction of 1894, with Minnie Cook. His flowers bore the long journey well, and were favorably received.

J. M. Gasser received first for 100 blue violets; Bassett & Washburn second. For 200 spikes lily of the valley first went to August Jurgens, second to J. M. Gasser.

SEEDLING CHRYSANTHEMUMS.

Following are the awards on, and the judges' descriptions of, the entries in the classes for tested seedlings:

PHILADELPHIA. Certificate. Hugh Graham, Philadelphia. A grand large incurved bloom, full and globular, the most distinct variety on exhibition. Creamy white in general effect, a tone of color difficult to describe.

CRYSTALLINA. Certificate. J. C. Vaughan, Chicago. Snow white, medium size flower, Snowball type. Quite distinct and early.

E. M. BIGELOW. Certificate. Fred Dorner & Son, Lafayette, Ind. Best red to date. Almost perfect habit as ex-

hibited. Large sized bloom, full and regularly incurved.

MRS. S. T. MURDOCK. Certificate. Fred Dorner & Son. Improvement over any existing tones of light rose or pink, all things considered. Good size, substance and finely formed.

MRS. H. W. EMERSON. Certificate. Fred Dorner & Sons. As compared with Sunderbruch, Mrs. Craig Lippincott and Dailedouze, et al., several points in its favor. A glorious yellow of great size.

MRS. W. H. RAND. Certificate. J. C. Vaughan. A distinct variety of Japanese type. In color a remarkably rich yellow, fine long twisted and reflexed petals a little after the style of Shawmut. It is highly recommended as a cut flower.

GOLD DUST. E. G. Hill & Co., Richmond, Ind. Special mention. Decided improvement of the yellow hairy type.

MRS. MOSES J. WENTWORTH. J. C. Vaughan. Special mention. Large rich yellow, full and deep. Strong compact habit. An improvement in the Chinese class.

LOUISE D. BLACK. E. G. Hill & Co. Special mention. Splendid color of Jardin des Plantes, golden orange, full deep bloom.

MRS. DARLINGTON. E. G. Hill & Co. Special mention. A magnified Jos. H. White of salmon tint, nearly white when fully expanded.

OAKLAND. Fred Dorner & Son. Special mention. Clear shade of even terracotta. An ideal bloom full and deep.

MILDBROOK. Fred Dorner & Son. Special mention. A large exhibition flower after the Vivand-Morel type. A bronzy salmon red shade.

BURT EDDY. J. C. Vaughan. Special mention. An immense flower for exhibition, full and double but objectionable color, silvery rose and purple. An improvement, however, in this class.

JAYNE. J. C. Vaughan. Special mention.

NEW CHRYSANTHEMUM PHILADELPHIA

For exhibition or pot plants highly commended. Excellent habit. Dark shaded rose, regularly formed, incurved blooms.

LAFAYETTE. Fred Dorner & Son. Special mention. Worthy of trial as exhibited, for dwarf pot plants. Color rosy amaranth.

MANTEL DECORATIONS.

Tuesday brought out the mantel decorations. There were seven entries, and on the whole the work showed an advance over that of former years, though we do not think any of them were entirely beyond criticism. The first prize went to Anthony & Curran for a tasteful

arrangement in cattleyas. A cattleya plant stood at one side, and trailing sprays of asparagus springing from this were brightened by cattleya flowers caught in the vine. The plants towards the sides were palms and ferns, and the only unnecessary note was a bunch of valley on the shelf. This was greatly admired.

The second prize went to Walter Kretling. In this decoration the colors were green and white; the overmantel was filled with adiantum, a white leaved caladium showing below; the plants at sides and below were green palms and ferns, and in the center of the shell was a large vase of Mrs. Duhme chrysanthemums, forming a graceful trailing bunch. The third prize was awarded to W. J. Smyth, both mantel and overmantel being banked with ferns; the flowers used were Cattleyas labiata and Bowringiana, and a yellow odontoglossum. In addition to these awards the judges gave especial commendation to the arrangements by H. F. Halle, O. J. Friedman and P. J. Hauswirth. The judges were ten ladies prominent in Chicago society. A more detailed description of the decorations, with illustrations and an analysis of the awards by the judges, will appear in the next issue.

THANKS TO THE JUDGES.

On Tuesday evening, at 6 o'clock, the officers of the Horticultural Society and a number of those most active in the exhibition entertained the judges with a little dinner at the Union League Club. In addition to President Chadwick, who presided, and the three judges, there were present Messrs. W. C. Egan, W. N. Rudd, J. C. Vaughan, O. P. Bassett, G. L. Grant, Mr. Dorner Jr., W. J. Smyth, P. J. Hauswirth, T. F. Keenan, Jos. Locke, Geo. Gardner. The affair was entirely informal and was thoroughly enjoyable. The judges, Messrs. Scott, Rawson and Bennett, were officially thanked for their kindness in taking up the onerous work of judging the exhibition of 1894, and for the pleasure of their presence. Each replied in a pleasant speech, saying many complimentary things about the exhibition and wishing the society financial success equal to the artistic perfection attained in the display. Every one regretted that there was not more time to do the various subjects justice, Mr. Scott being obliged to take a train at 8 o'clock.

ROSES AND CARNATIONS.

The second competition in roses and carnations occurred on Wednesday. In the rose class calling for 25 American Beauties J. M. Gasser, Cleveland, O., was first with a fine vase; the same exhibitor took second for 50 Brides and 50 Bridesmaids, first for 50 Mme. Cusin. Bassett & Washburn were second for 25 American Beauties, first for 50 Bridesmaids, first for vase of 12 American Belle, and second for Perle des Jardins. Reinberg Bros. were first for Kaiserin Augusta Victoria, first and second for Mme. C. Testout, first for The Bride, La France, Meteor and Perle des Jardins, second for Catherine Mermet, and any other variety (with Duchess of Albany). W. A. Kennedy was second for 50 Meteor, first for Catherine Mermet, first and second for Papa Gontier, and first for 50 of any other variety, with Mrs. Whitney.

In the carnation classes of the second competition H. Weber & Son, of Oakland, Md., won first prize for 50 blooms of Lizzie McGowan, first for any other white, and Portia, second for any other red, second for Wm. Scott, first for any striped variety (with J. J. Harrison). Henry Mundt received first for Silver Spray, and first for Tidal Wave. Albert Fuchs was second for Silver Spray, second for Tidal Wave and Daybreak. Stollery Bros. were second for Lizzie McGowan, and first for any other color. Aug. Jurgens was second for Portia, first for Garfield, Albertini and any other pink, second for striped, with Orange Blossom, and second for any

NEW CHRYSANTHEMUM MRS. S. T. MURDOCK, AS SHOWN AT CHICAGO.

other color. Anthony & Curran were first for Uncle John. J. F. Klimmer was first for any other red, with Thos. Cartledge, first for Wm. Scott. W. A. Kennedy was first for white, introduction of 1894, and Nathan Smith & Son, Adrian, Mich., first for pink, introduction of 1894, with Mapledale.

In the class calling for 100 violets J. M. Gasser was first and W. A. Kennedy second.

A new rose from Lewis Ullrich, Tiffin, Ohio, was exhibited by Reinberg Bros., Chicago, too late for competition. It is a good fair size, and shapely bud, clear blush with a deeper salmon tint in center, after the order of Mme. Pierre Guillot and Watteville, and yet distinct from either, as shown in a bunch of fifty.

The finest violets at the show came from Thos. Devne & Son, Poughkeepsie, N. Y., and arrived too late for competition.

TABLE DECORATIONS.

There were twelve entries in this competition, the arrangements being in most cases an improvement over previous years. P. J. Hauswirth was the winner of the first prize. His table was round, large enough to avoid all appearance of crowding. In the center was a light and feathery mound of maidenhair and cypripediums, standing on a mirror bordered with selaginella. Six feathery little cocos rising from a tuft of selaginella stood at intervals in the space between the centerpiece and covers. The favors were cypripediums and ferns. The exquisite simplicity of this arrangement was its great attraction, and the central group was so light and airy it suggested all sorts of poetic similes.

The second prize was awarded to W. J. Smyth, whose arrangement consisted of a high center bowl of cattleyas and Adiantum Farleyense; around it were four

specimen glasses holding light sprays of the same. This table also was free from any suspicion of overcrowding, and was really very tasteful.

The third prize went to J. M. Gasser, for the only chrysanthemum table shown. Like the two first described it was round. In the center was a tall trumpet glass filled with yellow chrysanthemums and ferns. Around this, but some little distance from it, was a broad band of the yellow chrysanthemums loosely arranged; single specimens were laid at each cover. This was a handsome arrangement, and very well set up. A fuller description of all the tables, with analysis and illustrations, will appear in next week's issue.

CHRYSANTHEMUM PLANTS.

Thursday's competition in plants was confined to the single stem class. For 40 plants, white, J. C. Vaughan received first on habit and foliage; Bassett & Washburn second, R. Witterstaetter third. For 40 plants, pink, J. C. Vaughan first; Bassett & Washburn second. For 40 plants, yellow, first J. C. Vaughan; second Bassett & Washburn, third R. Witterstaetter. For 40 plants, any other color, J. C. Vaughan first. In the classes for yellow and any other color Hill & Co. were ruled out, their exhibit not complying with the rule requiring them to be grown in the pots in which they were shown, though the quality of the plants was very fine.

The cut blooms of chrysanthemums shown on Thursday consisted of introductions of 1894, 10 blooms, not less than five varieties. The first prize went to Hill & Co., second to J. C. Vaughan.

I. N. Kramer & Son, Marion, Iowa, and J. C. Vaughan made displays of canna blooms, not for competition. F. W. Woodward, Eau Claire, Wis., sent a beautiful spike of Vanda Sanderiana, the first time this rare and exquisite orchid has ever been exhibited in Chicago.

NEW CHRYSANTHEMUM E. M. BIGELOW, AS SHOWN AT CHICAGO.

REVIEW OF THE VARIETIES SHOWN.

Following we give an alphabetically arranged list of the varieties shown at Chicago, with comments on same by the three judges, Messrs. Wm. Scott, Grove P. Rawson and A. W. Bennett. The comments represent the combined judgement of the three gentlemen named.

Alba Venus. Good pot plant for general exhibition.
 Allerton, Mrs. A. C. Others better.
 Allerton, Mrs. S. W. Others better.
 American Flag. For exhibition cut flower.
 Amoor. Best of the Wheeler type. Good dwarf pot plant and fine exhibition cut flower.
 Arnold, Hicks. Good all around bronze.
 Autumn Glow. Others better.
 Avery, Mrs. C. D. Good as shown in Chicago, as a rule rather small.
 Bilsley, Harry. Still first-class, though rather tall.
 Bard, The. Good pot plant.
 Beau Ideal. Not fully developed when exhibited.
 Beaute Lyonnaise. Others better.
 Benedict, Judge. Hardly large enough as shown.
 Boehmer, L. Excellent bush plant.
 Bonnaffon, Major. First-class all around.
 Bramhall, Miss G. Fine exhibition flower.
 Calendula. Others better.
 Canning, L. Excellent pot plant.
 Chalfant, Clinton. First-class second early yellow.
 Challenge. Fine late yellow.
 Constellation. Good pot plant.
 Coupland, Mrs. Wm. Good general exhibition cut flower.

Craig, Mrs. R. First-class late variety
 Dailledouze, Eugene. Grand mid-season variety for exhibition and commercial use.
 Davis, Chas. First-class exhibition sort.
 Dean, Richard. Beautiful shade of pink, fine for cutting.
 Devoniensis. Others better.
 Domination. Still one of the best; correct name Mrs. Bullock.
 Drexel, Mrs. A. J. The best of its color—deep amaranth.
 Dulme, Mrs. C. H. Others better.
 Falconer, Wm. Good for plants and cut flowers.
 Fewkes, A. H. A fine late variety.
 Fifer, Mrs. Gov. Good pot plant, but not a cut flower.
 Fisher's Torch. A good maroon red for cut flowers.
 Giraud, M. A. Others better.
 Gladette. Others better.
 Goguc. Good pot plant.
 Golden Gate. Splendid exhibition cut flower.
 Haggard, Rider. A beautiful anemone, worthy of general trial.
 Hallock, V. H. Still all right.
 Hearst, Mrs. Senator. Good for exhibition.
 Higinbotham, Mrs. Best of the hairy pinks.
 Hill, E. G. Still an excellent late variety.
 Hill, Joey. Only for exhibition.
 Hill, Mrs. E. G. Fine with some, unsatisfactory with others.
 Hitzeroth, Emma. A fine late primrose yellow for commercial.
 Inter Ocean. Very fine for general use.
 Iora. Good for exhibition.
 Ivory. Still unsurpassed; best selling white to date.

Jeffords, Marguerite. Very fine golden bronze.
 Jessica. One of the best early whites.
 Joanna. Others as good and better.
 Kimball, Mrs. W. S. Exhibition variety.
 Lanier, Mrs. C. Others better.
 L'Enfant des Deux Mondes. Best white hairy and splendid pot plant.
 Lincoln, W. H. Still a grand variety in all respects.
 Lippincott, Mrs. Craige. Second early; large rich yellow.
 Madeira, Mrs. L. C. Superseded.
 Magee, Mrs. Geo. A very distinct exhibition flower.
 Magenta Queen. Simply awful; Mathews may like it.
 Marie Louise. Pretty good early sort.
 Mathews, J. S. Good fair bronze.
 Mayflower. Very distinct type.
 Mermaid. For exhibition still useful.
 Minerva. Splendid pot plant; always attracts attention.
 Monarch of Ostrich Plumes. Only fair.
 Morgan, Mrs. Geo. Real good yellow.
 Mutual Friend. Very good in all respects.
 Nemesis. A very distinct anemone.
 Newitt, W. G. Only good for exhibition.
 Niveus. A first-class white.
 Ondine. Not much good.
 Owen, Rob't. Fine Chinese yellow.
 Palmer, Mrs. Potter. Beautiful pink shade of fine form; a good commercial variety.
 Pitcher & Manda. Fine exhibition variety.
 Playfair, Lady. Splendid early pink for commercial use; good keeper and shipper.
 Prass, Eda. Still a grand pink.
 Price, T. C. Exhibition.
 Pullman, Miss Florence. One of the best whites of the season.
 Pullman, Mrs. G. M. Fair yellow.
 Queen, The. Well named, and unsurpassed.
 Rinek, Mrs. H. Fine for exhibition.
 Robinson, Eva. Others better.
 Roslyn. Fine for exhibition.
 Rudd, W. N. Best of the elk's horn type.
 Sautel's White. No good.
 Seguisiana. Splendid for cut flowers and exhibition; golden bronze.
 Seward, Wm. No good.
 Shawmut. Fine exhibition yellow; very large.
 Shrimpton, John. An early Cullingfordi.
 Smith, Col. W. B. Grand golden bronze for general use.
 Smith, Pres. W. R. Fine color and free growth.
 Spartel. Out of date.
 Spaulding, Ada. A useful sort for cutting.
 Starin, Mrs. J. H. Not valuable.
 Sunderbruch, H. L. A large beautiful yellow that has proved generally satisfactory.
 Temptation. Doesn't amount to much.
 Thompson, Mrs. F. For exhibition.
 Triomphe de St. Laurent. A glorious rich yellow.
 Vaughan, J. C. Distinct, but not useful.
 Violet Rose. Exhibition.
 Vivian-Morel. Strictly first-class.
 West, Mrs. Geo. Others better.
 Whilldin, Mrs. J. G. Still useful as an early yellow, when healthy.
 Whirlwind. An anemone without special value.
 White, J. H. Pretty medium size white.
 Widener, H. E. All right when well done.
 Wolcott, Mrs. E. O. Out of date.
 Wynne, Rose. An exhibition variety of peculiar effect.

Much Wisdom in Few Words.

Exhibitors and judges: Keep still and saw wood. This is my experience, and I have entered in both classes. G. P. R.

Philadelphia.

The Pennsylvania Horticultural Society's chrysanthemum show opened under most favorable auspices on Tuesday, November 6, at 2 p. m. All the previous day it had rained hard and was very blustery as well which interfered to a great extent with the hauling of plants. Large specimen chrysanthemums are difficult to move in the best of weather and the growers who attempted to bring their plants in on Monday had a very trying time, and many of their best specimens were badly damaged. Early on Tuesday plants came in so fast that it seemed as if the committee of arrangements would never get things straightened out in time for the opening. At 10 a. m. the floor of the Academy was covered with groups of plants seemingly placed anywhere, but by noon things began to take on a more orderly appearance, and finally at the advertised time for the opening the exhibition was ready for the public.

Hugh Graham and John Westcott had charge of the decorations, which were on quite an elaborate scale. Mr. Westcott had the main vestibule and lower lobby, and Mr. Graham arranged the interior, decorating the front of the balcony and family circle, the boxes and the sides of the stage. He also erected a very handsome pagoda in the center for the orchestra. This was covered with laurel and oak branches; out of this projected long bamboo rods on which were strung lanterns. The whole had a very pleasing effect. The front of the galleries were draped with different colored cheese cloth and at intervals were large plaques of autumn leaves and laurel branches, each of which supported bamboo poles and lanterns. The whole effect was fairylike. The stage was set appropriately with a tropical scene and fringed with palms and other foliage plants, among which were some very fine specimens of ferns and selaginellas from the Caldwin conservatories, through Mr. Joyce. John Whitaker, gardener to Mr. R. W. Downing, of Wallingford, had on the opposite side of the stage a magnificent exhibit of ferns in pans and pots; they were very large, one specimen of *Adiantum cuneatum* being almost four feet in diameter, and several others were almost equal in size. Mr. Chester Davis exhibited a few very choice decorative plants among which *Phyllotanium Lindenii* and *Sarracenia Drummondii* were beautiful specimens. Robert Craig arranged about the exhibition a large lot of caladiums, well grown plants, and a number of *Phrynium variegatum*. These were placed along lines of chrysanthemum pots and added much to the decorative effect.

John Westcott trimmed up the vestibule very nicely with palms, spruce trees and laurel, and also decorated the lobby with similar plants. A fine group of palms was also placed by him on the left of the stage.

The chrysanthemum plants were not up to the standard of previous years; very few of them would have been winners last season; they seemed in most cases to have been drawn too much, and being staked out to their full length the flowers seemed very few for the size of the plants, while the stakes were painfully apparent. These specimens were arranged next to the parquet circle, circling the outer edge of the main hall, and one exhibit occupied the left of the stage. Gordon Smirl's ten plants, which took first premium, consisted of the following: Minnie Wanamaker, Good Gracious, Frank Thompson, President Harrison, Ada Leroy, Mrs. R. Craig, Gettysburg, Vivian-Morel, Col.

Scale
one foot.

NEW CHRYSANTHEMUM MRS. W. H. RAND, AS SHOWN AT CHICAGO.

W. B. Smith, and Louis Boehmer. Emil Leiker exhibited ten good varieties which were awarded second prize.

Other specimen plants were arranged in the front vestibule. Among these latter there were some fine specimens. Quite a number of plants grown to single stems were to be seen and more of these should be encouraged, as they invariably are fine flowers each and remain fresh during the entire show. Mr. C. W. Cox had a number of fine plants of this character, which were well done and attracted considerable attention. Mr. C. W. Cox and Pennock Brothers showed some fine window boxes of growing chrysanthemums which were much better than shown in previous years.

What was deficient in the plants, however, was more than made up in the display of cut blooms, which were unusually fine. We doubt if such a collection was ever gotten together in this country before. The small entries occupied two long wide tables in the center of the stage while the large vases containing twenty-five to fifty blooms were placed around the music pavilion in the center of the hall, and in a large group among low foliage plant near the pavilion. In this group were also placed the two large vases entered for the inter-city contest and it goes without saying that they attracted a great deal of attention. Three other cities had entered but did not send their exhibits.

On Thursday, in order to freshen up the exhibits the Philadelphia Florists' Club placed on exhibition a vase containing one hundred blooms and they were much admired.

Mr. E. G. Hill, of Richmond, Ind., deserves a great deal of credit for his magnificent collection of blooms, bringing them as he did such a distance; they arrived in splendid condition and added much to the exhibition.

Probably the most prominent feature of the show was the large vases of 25 and 50 of one kind. There was the Queen, Mrs. Craig Lippincott, Eugene Daille-douze and others which made a most beautiful display and crowds hovered

about these vases at all times. More of these exhibits, to the exclusion of plants, would make the show more attractive. The only drawback is their liability to wilt, but if properly cared for at night and the foliage kept constantly sprinkled they could, with a few additions, be kept presentable during the entire show. At all exhibitions of this character a special committee should have this matter in charge and be ready when the show closes for the night to see that the hall is made as cool as is necessary and that all flowers are sprinkled and covered up from drafts.

The vases arranged on the tables were too high by at least one foot and perhaps 18 inches. The ordinary high vase that contains these flowers should not be raised above one foot from the floor, as the flowers are much handsomer when looked down upon than when on a level with the eye.

The special feature of the show was the new chrysanthemum Philadelphia. It was on everybody's tongue: "Oh, how beautiful," "I never saw anything so handsome," etc., etc. Owing to all the light being artificial the beautiful lemon tint peculiar to this variety was missing, yet still the people were attracted by its shape and it was invariably pointed out as the handsomest on exhibition.

A seedling white raised by Thos. Monahan, and exhibited by Mr. Spaulding, of Orange, was its nearest competitor. This, while a very fine flower, was not in it with Philadelphia. The Mayor of the city thought so much of it that he came to the show and christened the flower, saying as he took a bunch of them from Mr. John Burton, vice-president of the chrysanthemum society, "That while it was a remarkable flower it would never have cause to be any thing but proud of its name."

Between the tables of chrysanthemums and the pagoda were two large round tables covered with vases of fine roses. These collections attracted a great deal of attention as they always do. Out in the front corridor were arranged the car

Scale
one foot.

NEW CHRYSANTHEMUM MRS. H. W. EMERSON, AS SHOWN AT CHICAGO.

nations and a very fine lot they were. There certainly has been a great improvement in this flower the past few years. This collection is a very fine one and much better than ever the society has had before.

In one of the smaller rooms off the corridor were two exhibits of orchids, one of commercial varieties suitable for forcing for cut flowers, by Edwin Lonsdale, and the other, quite a large collection, by Pitcher & Manda, for private conservatories. These latter received the first prize, \$50, while Mr. Lonsdale was awarded a special prize of same amount.

The attendance is much better than last year, the first day being quite an advance on the attendance last year, while the second is away ahead. Everybody is delighted with their visit and the officers of the society are correspondingly elated.

VEGETABLE EXHIBITION.

Special efforts were made in this department to have a fine display. The society offered extra inducements to market gardeners and others, and the result fully justifies the attempt to make this much neglected section more interesting. The ladies especially were pleased with the grand display of good things for the table. The big pumpkins, cabbages, mangels, potatoes, etc., excited their wonder and admiration to a remarkable degree and this section of the show was crowded nearly all the time. Too much praise cannot be given to the firm of Henry A. Dreer for their efforts to make this department successful. They not only offered handsome cash prizes but took an active interest in inducing growers to come forward and exhibit. They also took pains to help in staging, etc., and contributed largely to the gratifying success.

The first prize for the general collection was carried off by R. C. Kaighn, Camden,

N. J., with a magnificent collection of 63 varieties. A large pumpkin of the Slater's mammoth variety weighing 150 pounds, attracted considerable attention, as also the big cabbages and specimens of that rarely seen vegetable, cardoon, kohlrabi, broccoli, and King Humbert strawberry tomato. The second in the collections was awarded to John M., a brother of R. C. Kaighn, for a smaller lot, but equally fine and containing some unusual sorts such as the wild yam, Martynias, Ram's Horn bean in addition to the regular display of cabbages, cauliflower, beets, radishes etc. There was no third prize, but a collection from C. W. Cox, gardener to Clay Kemble, Esq., well deserved that honor. Although the extent of the collection was not so great the quality of the exhibit was superior to anything else shown. Other exhibitions in this section (collections) were Henry Diehle, gardener to Mrs. Steele, Germantown; and John McCleary, gardener to Wm. Weightman, Germantown. Julius Breast, gardener to Jay Cooke, Jr., got first for hothouse tomatoes with a fine plate of "Lorillard." Julius Rieger got the prize for mushrooms. Mrs. M. D. Henzey showed some fruits of the osage orange, quite a novelty hereabouts. The Dreer prizes were well contested.

NOTES.

The competition for the "Blanc Prize" was very keen. There were many entries in this contest, but it finally simmered down to two, the famous "Philadelphia" and a large white, unnamed, raised by Wm. Jamison and grown by Henry B. Surman. In the estimation of some the latter variety should have received the prize. It is a larger flower than the "Philadelphia," and fuller. The "Philadelphia," however, has the advantage in being an entirely new type, both in

form and delicate coloring. Another very fine variety in competition for this prize was one labeled "Olympus," exhibited by John N. May. This was also a large, massive flower, but with less substance than its competitors.

In the competition for the "Wohlruh Prize," which is offered by Chas. Dissel, Esq., for the best twelve blooms for a variety not yet disseminated, there were several entries. Hugh Graham was the successful competitor with his seedling "Mrs. H. L. Romig." It is beautifully incurved in form, full to the center, and will evidently make a good cut flower, as well as an exhibition variety, though rather undersized as compared with some of the leading popular varieties of to-day. In this class a variety that reminded us very much of Mrs. L. C. Madeira was exhibited by E. G. Hill & Co., but it has a stouter stem, and under the artificial light in the Academy of Music it appeared to be a deeper shade of yellow. There was none of that variety in the building with which to compare it, or we could tell better wherein the two varieties differ. One named "Colosseum" in this class also created a very favorable impression. It was large in form and pure white in color, similar to Domination, but the petals are broader, and the flowers, we think, are much larger than the older sort. Exhibited by J. N. May.

The "Sugar Loaf Prize" of \$25, offered by Chas. W. Trotter, Esq., for the best seedling never before shown, was awarded to Robert Carey, gardener to T. C. Price, Esq., Chestnut Hill, for a variety that under the poor light seemed to be tinted with blush. It was of a fair size as grown for cut flowers, a pretty flower, though a trifle undersized as grown on the plant.

Among the novelties of last year Eugene Dailedouze stood out well to the front. So also did Inter-Ocean, the delicate blush pink variety of the Vivian-Morel type. Pitcher and Manda, one of last year's novelties, was of very good form, and the yellow in the center made it very distinct; it is an excellent variety in collections, but whether it will be a favorite among commercial cut flowers remains to be seen. A variety labeled Autumn was a beautiful old-gold colored bloom. It resembles somewhat Wm. H. Lincoln in form, but as seen here was a better flower, though not of course the same color, being a bronze, whereas Lincoln is a good pretty yellow. Chas. Davis, a tawny colored sport from Vivian-Morel, is a good one to make variety in collections. It showed up in good form. Challenge was not seen very frequently. In one collection it was noticed as hardly up to its form of last year as seen at Chicago. One or two flowers of Shawmut were very large and graceful, light yellow in color. This is a variety new to me. The Queen sustained the good reputation she made last year. Mayflower we think will be some of the winning collections in the next year or two. Among the pinks Erminilda and Katherine Leech, both new ones of last year, were very favorably commented upon by those who are interested in the growing of cut flowers for the market. L.

Pittsburg.

The great display of chrysanthemums at the Phipps conservatories in Schenley

Park has attracted immense crowds. It is estimated that 50,000 persons viewed the display on November 4, the opening day. After completing the arrangement of the display Superintendent Bennett went to Chicago to act as one of the judges of the exhibition in that city.

Boston.

"Far ahead of last year" might be termed a stereotyped phrase as applied to chrysanthemum shows. It is true, however, so far as the Boston exhibition of 1894 is concerned. Just when the limit of improvement will be reached and chrysanthemums will have attained their highest development no one can guess, certainly there are no indications in that direction yet. These introductory remarks are intended to apply to blooms and not to trained plants. It is not claimed that the best plants on exhibition this year are any better than the best of those last year, but there are more of them this year that are entitled to the distinction.

The big premiums for 12 specimen plants, first, second and third were awarded to Walter Hunnewell, N. T. Kidder and John T. Gardner in the order as recorded, Mr. Kidder taking both second and third. The groups arranged with foliage plants for effect ranked Bussey Institution first, John L. Gardner second, and William H. Elliott third. In the classes of plants grown to one stem and bloom Thomas Dolliber, Dr. C. G. Weld, W. F. Gregory and Mrs. I. S. Farlow were competitors, in addition to the exhibitors already named. The plants from Wm. H. Elliott and Wm. Edgar were bushy plants grown low and compact for store trade.

The lower hall was devoted entirely to the cut blooms, and no description can convey an adequate idea of the splendid effect. The enormous vases which first met the visitor's eye on entering the hall stood with their contents seven and eight feet high, the stems on most of the blooms being four and five feet long. The finest of these came from James Brydon, and were grand, not only in flower but in stem and foliage as well. The vases of ten blooms each, which were arranged along the front of the stage were mainly from Waban Rose Conservatories. Here again flowers, stems and foliage were superlatively grand, such varieties as Eugene Dailledouze, Inter-Ocean, Mutual Friend, Robert McInnis, Mrs. Jerome Jones, Vivian-Morel, Mrs. Phipps, Major Bonnaffon, Harry Baisley and H. A. Sunderbruch being shown as never before. Clarence, from J. Eaton, Jr. was another variety that showed up finely in this class. All individual blooms were shown with stems fifteen to eighteen inches long in separate vases, no display boards being used. The advance in quality in this section was very pronounced. James Brydon, W. Slack, Jos. H. White, C. V. Whitten, Mrs. A. D. Wood, E. Converse and Jas. Nicol were the principal exhibitors in these classes. W. Slack is a new contributor, and his blooms ranked among the best, giving some of the old standbys a close rub. He was the only exhibitor of anemone flowered varieties, but it was a fine set, and was much admired. Mrs. B. P. Cheney was another new comer. Her collection contained many kinds seldom seen, but exceedingly well grown, and it was a pity that they were shown without names. F. B. Hayes, W. F. Gregory, Wm. Edgar and Wm. Nicholson were also among the contributors.

In the groups of twelve best named

varieties, introductions of the current year, T. D. Hatfield, gardener to Walter Hunnewell, was first. Noticeable among the varieties shown by him were Prairie Rose, Wanlass, A. H. Fewkes, and Frank Hatfield, second prize in this section was awarded to Pitcher & Manda, among whose best varieties were Mrs. E. O. Walcott, Mrs. J. H. Starin and Mrs. Chas. Lanier. What constitutes an introduction of the current year was a difficult question for the committee, and it would be a good idea for the National Chrysanthemum Society to specify clearly whether an introduction exclusively in England or France last year would debar a variety from competing in this class in America this year.

Well known varieties which were noted as having made special developments in quality of bloom as compared with previous years were Marguerite Jeffords, Pitcher & Manda, Golden Gate, Shenandoah, H. F. Spaulding, President W. R. Smith, Mutual Friend, Mrs. A. J. Drexel, and Vesuvius. Less well known but showing most promising advance in good points were the following varieties: Florence Pullman, a white from L. W. Goodell, Ox Blood, an unequalled red from Mrs. E. M. Gill, a deep pink Ada Spaulding from Norris F. Comley, which was certificated last year, and Clarence, from J. Eaton, Jr. which received first prize two years ago and is probably the brightest of all the scarlet and gold incurved section. There were only a couple of good blooms of Challenge in the hall, and poor Golden Wedding showed unmistakable signs of going down hill. Among the varieties which seemed to take highest rank with visitors were Eugene Dailledouze, Major Bonnaffon, The Queen, Niveus, Mrs. Jerome Jones, and Inter-Ocean.

The awards for seedlings never disseminated were as follows: Best pink to P. Melia, for unnamed flower like Violet Rose, lighter shade of pink, and nearly a self color. Best white to Hugh Graham for Philadelphia, a fine Japanese incurved which has all the points of a good keeper. Best yellow to Pitcher & Manda for Mrs. W. A. Bryant, a rich deep color with unique arrangement of petals. Best incurved to T. D. Hatfield for Mrs. T. D. Hatfield, yellow in way of Mons. Roux. Complimentary notices were given to the following seedlings; to C. S. Goddard for seedling of 1892; to H. A. Gane for Mrs. Geo. A. Gane, white and Mrs. Louise Chard, pink; to Geo. Hollis for Golden Rule, fine yellow, to J. Eaton, Jr. for Penikese, a pink feathery petalled sort; to P. Melia for a pink of Elksborn type, and to Kenneth Finlayson for a pretty apricot colored sport from L. Boehmer.

Some fine collections of carnations were shown by Mann Bros., Fisher & Aird, R. T. Lombard and Wm. Nicholson. Complimentary notices were given to two whites from Sewall Fisher, Market Crystal and Number 162. White seedlings were also shown by Fisher & Aird and Wm. Nicholson.

The new hybrid tea rose Belle Siebrecht was shown in good form by Siebrecht & Wadley and received a first-class certificate. The attendance at the exhibition was the largest on record.

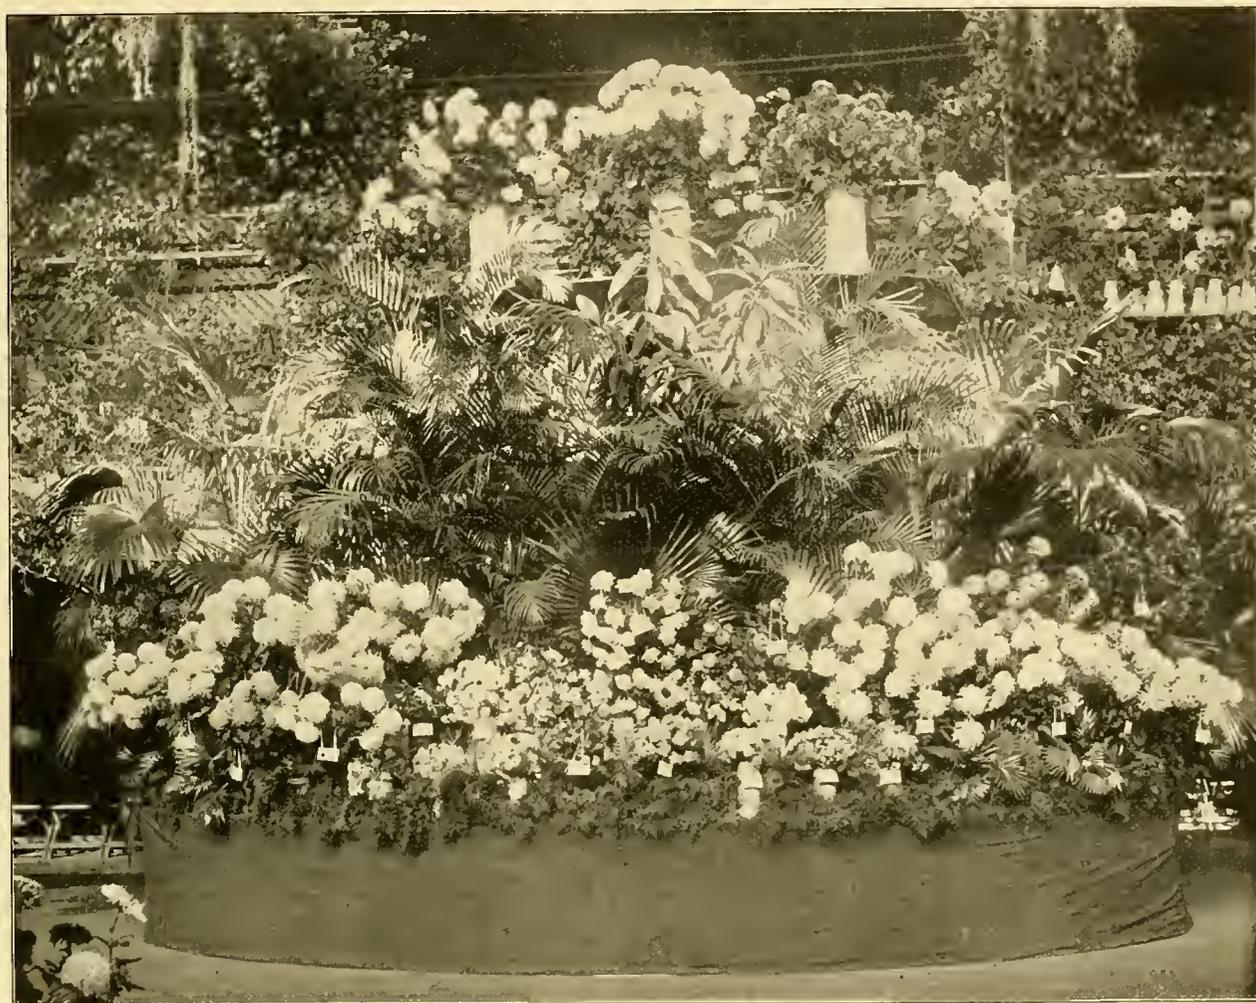

The Philadelphia Supper.

The annual chrysanthemum supper was held at the Hotel Metropole, across the street from the Academy, and was attended by some sixty florists and visitors. The dining room was very attractive; in the center of the large table was a huge basket of chrysanthemums,

on either side of which stood a tall vase. In one was a lot of Major Bonnaffon and in the other a number of blooms of Philadelphia. Among the guests were Ben Dorrance of Dorranceton, Pa., John Taylor of Bayside, Major Bonnaffon of Philadelphia, A. M. Herr, H. Schroyer, Walter Howard and Mr. Rohrer of Lancaster, J. L. Dillon of Bloomsburg, A. Dimmock of England, George Fancourt, J. H. Troy and Mr. Wallace of the *Florists' Exchange*. W. R. Smith of Washington was in town, but not able to be present. Mr. C. H. Allen, Ernst Asmus, John N. May, E. Dailledouze of New York, and Mr. Hill, all at the show, had to leave for home before the time set for the dinner, and their presence was much missed.

After an excellent menu had been served, which was interrupted several times by the electric lights going out, caused as was said by some by the great depression of the Democrats, Mr. Lonsdale rapped for order, and welcomed the visitors in a neat speech and then appointed Mr. Craig toastmaster. Mr. Craig said he admired the easy grace of Mr. Lonsdale, who could throw the responsibility of the occasion on him in such an easy and graceful manner. He said he was sleepy, and had not slept for two nights. He went to Baltimore on Monday and he was treated so well that he could not find time to sleep, and when he got to Philadelphia the next day, listening to the returns kept him awake another night, and he thought he would rather take a rest than accept such responsibility. He spoke of the grand array of blooms on exhibition and was sorry that the plants were not up to the standard of former years. He said the society owed a great deal to James Verner, and hoped another such grower with the same facilities would spring up before long. But he was glad to say that the character of flowers on exhibition more than made up for the lack of fine plants. He now toasted the chrysanthemum and called on Mr. Harris to respond. He said Mr. Harris was the father of the chrysanthemum and a comedian of note. Mr. Harris said he was not in it this year, as the young fellows were setting a very fast pace; he would not give up, however, but would give them all a tussle yet. He said Mr. Craig had called him first as he wanted to clear the board of the rubbish, and then bring on his orators. Mr. McCall now sang a ballad, and "Philadelphia," the new variety, was toasted. Mr. Graham replied in a few words, thanking everybody for the interest in the new flower and said they were not going to stop until they had one of the same form and a good pink; then they wanted a blue, and a white with red hair was a possibility. Major Bonnaffon was then called and made a very funny speech, saying he raised the flower that bore his name and took it up and gave it to a grower who exhibited it at the World's Fair and now its fame was world wide. He read some poetry he had sent him and said he had a lot more, which he would read later.

George Anderson was asked to tell of the chrysanthemum disease, as he had been heard to say that nothing smaller than a cow could hurt the weeds. But George would not rise, and Dr. Goebel, who has been making a study of this blight, said that cross sections of the leaves showed them to be filled with living organisms, which magnified looked like larvæ, the results of eggs laid by a very small fly. He intends to study the subject further. Mr. McCall now sang "Brown October Ale," which was very well received. Mr. Schroyer of Lancaster

GENERAL DISPLAY OF E. WIENHOEBER & CO., NOT FOR COMPETITION, AT CHICAGO.

was proud of Lancaster, of the National Society and of the Philadelphia Florist Club. Messrs. A. M. Herr and J. L. Dillon made short speeches, and Mr. B. Dorrance made a characteristic address; he was not a friend of the chrysanthemum, he said, but if these shows raised enthusiasm have the shows by all means and boom business thereby. Have a rose show and boom the rose, and a violet show and boom the violet. Stick close to the press and educate the people up to the necessity of having flowers, and he wound up by reciting a Scotch selection. Mr. Burton, Mr. Dimmock and Mr. Troy made short speeches, Mr. John Walker sang an original song, and Mr. Wallace of the *Florists' Exchange* sang "I love the bonnie lassies," both of which were much appreciated. Mr. John R. Ashburne of Vineland played selections on the organ at intervals during the dinner, and wound up the entertainment, after Mr. Craig had been persuaded to sing "Father O'Flynn," by playing "Auld Lang Syne," in which the company joined with a will.

Indianapolis.

If good weather and good spirits will make an exhibition a success this year's show can not fail to be one. It is unquestionably as much an improvement over the last one as that was over 1892. While the plants are not as they should

be the cut blooms are uniformly excellent. Every display has its merits.

At the entrance is an arch of wild smilax and Florida moss, flanked at either side by a natural looking stone wall. Directly inside was a bank of tropical plants. The hall proper can be described as a perfect bower of evergreens, Florida moss, holly and other decorative material. The gallery railing was a study in decorative art, the blending of colors and the graceful looping being very well done. The stage decoration had for its center the word "Welcome" in red cape flowers, and on either side, in addition to bunting, wreathing, etc., a large pine illuminated with many colored incandescent lights.

The orchid display was a very creditable one, Mr. H. L. Sunderbruch of Cincinnati, who made the display, staging it in very careful style. Among them were *Cattleya Percivaliana*, *cyripediums*, *Vanda cœrulea*, *odontoglossums*, *Lælia Perrinii*, *Dendrobium Phalænopsis*. A few *Harrisii* lilies, *Tritoma uvaria*, *anthuriums* and *nepenthes* finished up this display.

The Huntington Seed Co. made a unique display with foliage plants and a rustic bridge composed of seeds and bulbs, the water being simulated by several thousand Chinese lily bulbs.

In the southeast corner Bertermann Bros. made an excellent display of decorative plants and jardinières, also a mantel display.

Along the sides of the hall a massive background of evergreens showed off the beautiful specimen cut blooms to advantage. The cut flower booth was especially attractive on account of the very choice selection of flowers now called for, instead of the cheaper grades formerly sold.

In front of the stage and also on it Anthony Wiegand made one of the best displays of tropical decorative plants ever seen in this hall. In another corner was a very neat cactus display, which attracted many admirers. Several aquariums were also an attraction to the little folks.

In cut flower premiums Hill & Co., Richmond, Ind., received first for 25 varieties, 3 blooms of each, special for 15 varieties of 1894, vase of 50 yellow (*E. Dailedouze*), first for 15 varieties, first for 20 blooms, all colors, first for hairy varieties, and first for 50 blooms, any variety. Highland Floral Co., Dayton, O., received a special for the largest bloom in the hall. Fred Dorner & Son received special for 15 blooms, first for 20 blooms yellow. R. Witterstaetter, Sedamsville, O., received first for 20 blooms, pink. Nathan Smith & Son, Adrian, Mich., first for 20 blooms, white, *The Queen*.

In the seedling classes Henry Rieman received first for white, yellow and any other color. Hugh Graham received a certificate of merit for "Philadelphia,"

and certificates were also awarded to Hill & Co. and Dorner & Son.

In the plant classes Henry Rieman was first for 3 plants white, 3 plants yellow, 3 plants pink, 3 plants any other color, specimen white, yellow, pink and red, first for 50 plants. Bertermann Bros. received first for 50 plants white, 50 plants red. Hill & Co. received first for 50 plants yellow, John Hartje first for 50 plants pink.

The rose and carnation exhibits were very good. In the latter Dorner & Son made a very fine display. Henry Michel, Marion, Ind., had a group of extra good seedlings, as well as older varieties. John Hartje was another exhibitor of seedlings. J. S. Stuart, Anderson, Ind., and Bertermann Bros. were also exhibitors of carnations. R. Witterstaetter showed Adelaide Kresken in fine condition. Premiums were awarded as follows: John Hartje first for 50 white, with a seedling; 50 pink, Bertermann Bros., with Daybreak; special for introduction of 1894, W. W. Coles, with Adelaide Kresken. Special to Dorner & Son for E. A. Wood. The last named firm received certificates for Bridesmaid, a pink, Mrs. C. H. Duhme, pink. Henry Michel received certificate for No. 32, yellow.

In roses good displays were made by J. S. Stuart, Anderson, Ind., estate of M. A. Hunt, Nanz & Neuner, Louisville, Ky., Henry Rieman and W. W. Coles, the prizes being pretty well divided among them. H. Rieman made a good display of cyclamen plants. The Anchorage Rose Co., Anchorage, Ky., made a rose display, not for competition.

The special prize for market plants went to Ernest Huckreide. Among the floral arrangements shown Bertermann Bros. received a special for a triumphal arch, and Anthony Wiegand special for a floral ship. There were good displays of tropical plants in jardinières, Bertermann Bros. taking first. Rieman had an attractive table of adiantum and other foliage plants, with some *Gloriosum* blooms.

W. B.

Pittsfield, Mass.

It was a grand exhibition that the Gardeners' and Florists' Club of Berkshire County, Mass., put up, far ahead of any former effort here, and in some respects, notably in fine palms and decorative plants, it would be hard to beat anywhere. The sudden appearance of freezing weather was most unfortunate, for it caused great difficulty in handling the plants and kept the attendance on the first day down pretty low, but the last days of the week are expected to make the average good.

In chrysanthemum plants the trained specimens from A. P. Meredith, Thos. T. Connors, Edw. Dolby and others were very fine, a grand specimen of A. G. Ramsey from Mr. Meredith being the best plant in the hall. Groups for effect and groups of plants grown to single stem and flower from the same exhibitors, also from J. F. Huss, Geo. W. Burbank, Rob't Johnson and Neil Cobban, were also most creditable. Tall standards from Mr. Meredith, Mr. Connors and Mr. Dolby were as good as these unnatural arrangements are to be seen elsewhere.

The cut blooms were remarkably good. The best flower in the show was Mr. Dolby's Mrs. G. H. Morgan, a flower that would stand in the first rank anywhere. Mr. Dolby excelled in all the cut flower classes, Ivory, Vivian-Morel, Mrs. Bayard Cutting, M. B. Spaulding, Mrs. L. C. Madeira, Mrs. Jerome Jones

and other reigning favorites being all shown in best form. A. H. Wingett showed Mrs. Craig Lippincott, Ivory, Cullingfordi, Charles Davis among his best blooms; A. P. Meredith, fine Eda Prass, Mrs. Bayard Cutting, Wm. Simpson, etc.; and Thos. T. Connors and C. R. Russell also staged prize winning blooms. From Pitcher & Manda came an interesting exhibit of novelties, among which were some of their best seedlings of 1894.

The palms and decorative stove plants were a prominent feature of the show, and added greatly to its attractiveness. Mr. Wm. Griffin showed a superb group of foliage plants artistically arranged and finished. From A. P. Meredith came groups of handsome crotons, dracaenas and anthuriums, one of the latter being a large specimen in bloom of his seedling *Cuttingianum*. His ferns were as usual very fine. Robert Johnson's ferns were an exhibition in themselves. There were in his collection enormous specimens of *Microlepia hirta cristata* and *Cybotium regale* and *Scheddi*. A *latania* having a spread of nearly twenty feet towered over all.

The most admired plant in the hall in the experts' eye was a noble specimen of *Adiantum Williamsii*, said to be the finest in the country. Mr. Dolby's crotons and other foliage plants were likewise fine, as also were Mr. Huss' crotons, dracaenas, etc. W. A. Manda contributed a group of novelties, including a set of new dracaenas, *Pandanus amaryllidifolia* and other recent introductions. Neal L. Cobban also showed some grand palms, cycads and crotons. There were two good collections of orchids shown by A. P. Meredith and Wm. Griffin.

Carnations and roses in all popular varieties were staged by J. F. Huss, N. L. Cobban, F. I. Drake, Edw. Dolby, A. H. Wingett, C. M. Atkinson and T. T. Connors. The local florists, Messrs. John White, C. M. Atkinson and G. H. Hansford all contributed promiscuous stock of excellent quality, but the private gardeners will always be the heaviest exhibitors in a community like that which Berkshire County boasts.

The new hybrid tea rose *Belle Siebrecht* was exhibited in good form by Siebrecht & Wadley of New York.

Music was furnished during the exhibition by Clark's Orchestra.

St. Louis.

At the St. Louis show premiums were awarded in the plant classes as follows: Best 3 plants, white, in 3 sorts—1st John Armsby, 2nd F. J. Fillmore, 3d C. Young & Sons Co. Best 3 plants, yellow, in 3 sorts—1st C. Young & Sons Co., 2nd John Armsby, 3d A. Meyer. Best 3 plants, pink, in 3 sorts—1st Wm. Schray, 2nd C. Young & Sons Co., 3d Julius Koenig. Best 3 plants, any color, in 3 sorts—1st C. Young & Sons Co., 2nd John Armsby, 3d A. Meyer. Best single specimen, white—1st C. Young & Sons Co., 2nd F. J. Fillmore, 3d John Armsby. Best single specimen, yellow—1st John Armsby, 2nd C. Young & Sons Co., 3d A. Meyer. Best single specimen, pink—1st Wm. Schray, 2nd C. Young & Sons Co., 3d Charles Connor. Best single specimen, any color—1st C. Young & Sons Co., 2nd Wm. Schray, 3d A. Meyer.

Standards: Best single specimen plant, white—1st John Armsby, 2nd Julius Koenig, 3d A. Meyer. Best single specimen plant, yellow—1st John Armsby, 2nd A. Meyer, 3d Charles Connor. Best single specimen, pink—1st Julius Koenig; 2nd A. Meyer, 3d John Armsby. Best

single specimen plant, any color—1st Chas. Connor, 2nd A. Meyer, 3d J. Koenig.

Plants grown for market sales: Best 18 plants, not over 8-inch pots—1st A. Meyer, 2nd Chas. Beyer, 3d Wm. Schray. Grown to one flower, best 50 plants, one or more varieties—1st A. Meyer, 2nd Michel Plant & Bulb Co., 3d Wm. Schray.

In cut flower classes the following awards were given: Best 20 flowers, white, in 4 sorts—1st W. J. & M. S. Vesey, 2nd E. G. Hill & Co., 3d Michel Plant & Bulb Co. Best 20 flowers, yellow, in 4 sorts—1st E. G. Hill & Co., 2nd Michel Plant & Bulb Co., 3d Wm. Schray. Best 20 flowers, pink—1st E. G. Hill & Co., 2nd Wm. Schray, 3d Michel Plant & Bulb Co.

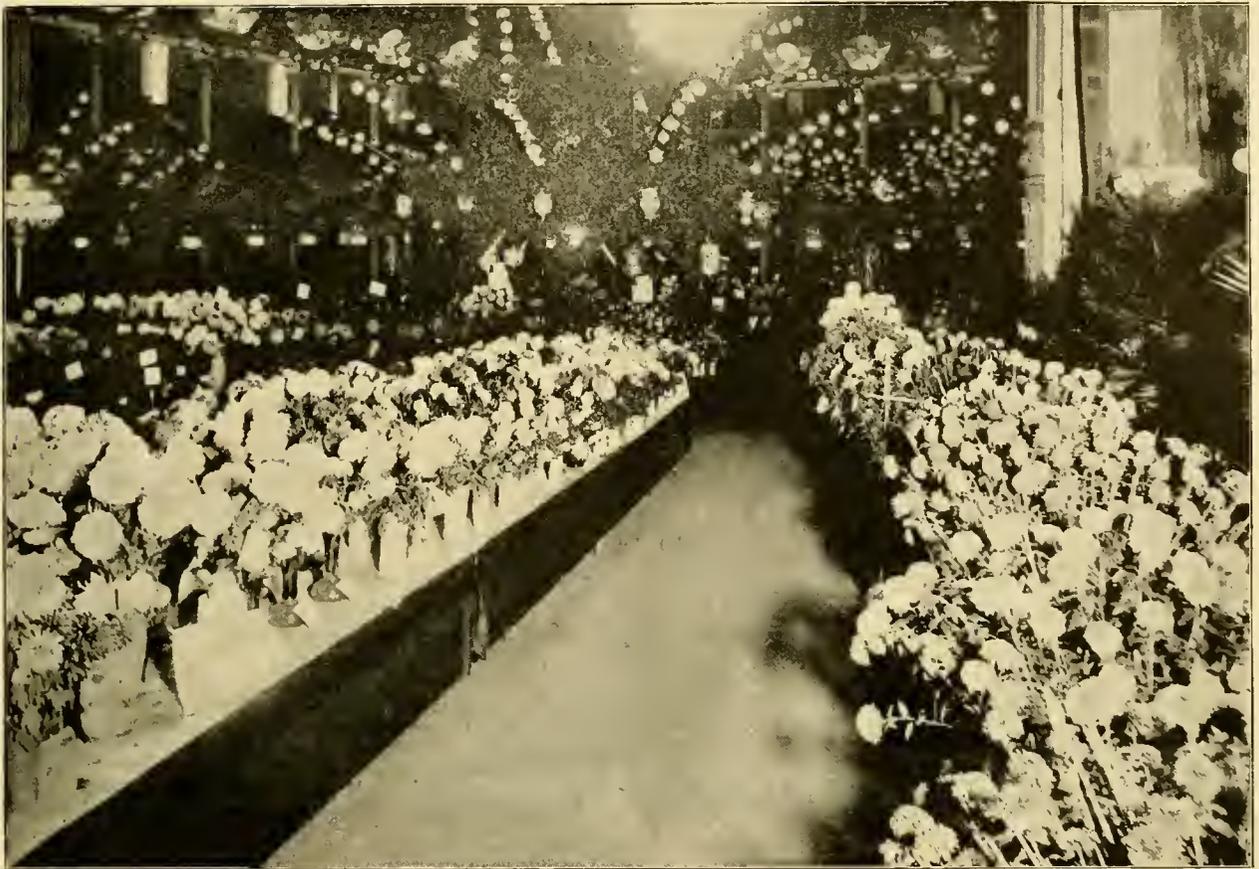

The Shaw premiums were given as follows: For the largest and best collection of named palms, not less than 12 kinds—1st Wm. Schray, 2nd Chas. Beyer. For the largest and best collection of named begonias, not less than 12 sorts—1st Michel Plant & Bulb Co., 2nd Wm. Schray, 3d F. J. Fillmore. For the largest and best collection of named ferns, not less than 12 kinds—1st Michel Plant & Bulb Co., 2nd Julius Koenig, 3d Wm. Schray. For the largest and best collection of named foliage plants other than the preceding, with variegated leaves, not less than 12 kinds—1st Wm. Schray, 2nd Michel Plant & Bulb Co., 3d C. Young & Sons Co. Best collection of 25 blooming plants for house decoration, exclusive of chrysanthemums—1st Wm. Schray, 2nd C. Young & Sons Co., 3d F. J. Fillmore. For the best specimen of *Areca lutescens*—1st A. Waldbart, 2nd C. Young & Sons Co. For the best specimen plant, shown as a centerpiece for table—1st Wm. Schray, 2nd Julius Koenig. For best specimen of *Howea Belmoreana*—1st Wm. Schray, 2nd A. Waldbart. For best specimen of *Howea Forsteriana*—1st John Armsby, 2nd C. Young & Sons Co. For best specimen of *Livistona chinensis*—1st A. Waldbart, 2nd Wm. Schray. For the best specimen of *Pandanus utilis*—1st A. Waldbart, 2nd Wm. Schray. For the best specimen of fern—1st Michel Plant & Bulb Co., 2nd Wm. Schray. For the best specimen of decorative plant other than the above—1st A. Waldbart, 2nd C. Young & Sons Co.

In carnations, for best vase of white, 40 flowers—1st Wm. Schray, 2nd Frank Fillmore, 3d Thos. Carroll. Best vase of pink carnations, 40 flowers—1st Wm. Schray, 2nd C. Young & Sons Co., 3d Thos. Carroll. Best vase of red carnations, 40 flowers—1st Thos. Carroll, 2nd C. Young & Sons Co., 3d A. S. Halsted. Best vase of variegated carnations—1st Thos. E. Carroll. Largest and best collection of cut carnations—1st Frank Fillmore, 2nd Wm. Schray. R. F. T.

Wayne, Pa.

The show opened here October 30, and was a success in every respect. The chrysanthemums, both plants and cut flowers, were excellent. The arrangement of the hall, under the charge of Jno. G. Gardiner, was most attractive. The judges were Thos. Cartledge, David Rust and G. C. Watson, all of Philadelphia.

Among professional exhibitors John Curwen, Jr., of Villa Nova, and H. G. Standen of Haverford displayed chrysanthemums, both flowers and plants. John Welsh Young of Germantown showed cut blooms of chrysanthemums. H. A. Dreer made a very large and fine display of dahlias, phlox and cannas, the latter including some six varieties. In the professional classes Mr. Curwen and Mr. Stan-

A CORNER AT THE PHILADELPHIA SHOW.

den were the leading prize winners. Mr. Standen took first for a seedling named Mrs. J. E. Gillingham.

Among amateur exhibitors or private gardeners prizes were taken by Gordon Smirl, Wm. Taylor, O. Paul, J. E. Krayner and J. F. Sinnott.

Notes of the Newer Chrysanthemums Seen at the Chicago Show.

The two grand yellows, Major Bonnaffon and Eugene Dailedouze, are in splendid form, and a glorious triumph for the golden flower. H. L. Sunderbruch is shown in fine form, large graceful blooms. Vivian-Morel is grandly represented in a vase of fifty magnificent blooms. Mrs. Potter Palmer is a shapely flower of a clear even shade of pink or light rose; appears to be a good thing for commercial use. Lady Playfair is a good thing, a large incurved flower, light pink with lavender shading; it will prove of decided commercial value, being early and of good substance, also a good shipper.

Richard Dean is a desirable pink for commercial use, bright fresh color, and plant of good habit. Marian Henderson appears to be a cross between *Gloriosum* and Mrs. Whilldin; I regard it a good thing, bright rich yellow, with a strong stem; this and Yellow Queen are specially valuable for early.

Minerva is an ideal yellow for a pot plant on account of its dwarf compact habit; it is not a cut flower sort. Amoor, an excellent bronze, belongs to this class,

as does "pink" Constellation. Mrs. Magee is a distinct kind for exhibition, of a pretty shade of lavender pink but otherwise too stiff in general appearance. I believe it is the most "solid" flower extant. Mrs. C. Harman Payne is a bright rose color when fully expanded, and makes a good pot plant, sturdy compact habit, giving a large exhibition flower. Joey Hill is a large red bronze adapted for exhibition only. Seguisiana must make a desirable addition to the cut flower class; bronze orange, reflexed and twisted blooms, medium size. Mrs. Robt. Pitcairn is a spot from Mermaid, a bronzy buff, for exhibition flowers.

Shawmut is a magnified *Gloriosum*, always attracts attention for its great size. Mutual Friend is well named; everybody likes it; very distinct shape. Marie Louise takes on account of its earliness. Miss Florence Pullman is an A1 white, grand. Mlle. Therese Rey is a valuable exhibition white of creamy tint. Mayflower is a white of exceedingly graceful effect on account of its outer petals extending beyond the general surface of the bloom; it is this peculiarity that makes it distinct from all others. A. H. Fewkes is a big solid yellow "mum"—the so-called yellow Minnie Wana-maker. Inter-Ocean is satisfactory all around, distinct in its pretty tint of white and blush. Silver Cloud is another good one, white and salmon tint. Clinton Chalfant for "second early" is a splendid commercial cut flower. White Boehmer is a good thing and so is the large hairy

pink, Mrs. Higinbotham. Chas. Davis is equal to Vivian-Morel in size, and identical in habit, and when it is fully expanded is a fine tone of salmon buff.

Pitcher & Manda is valuable for exhibition, of good habit the present season. Mrs. Howard Rinek is a big exhibition bloom, deep rose and silver. Georgienne Bramhall, light lemon tint, gives a good large well built bloom; and Triomphe de St. Laurent holds up a splendid rich yellow flower of grand size, on a rather tall stem. John Shrimpton is an earlier and larger Cullingfordi. Fisher's Torch is a maroon red of good size, holding on to its color well and a much better cut flower than the average. Rider Haggard and Nemesis are two very distinct anemones that all should have who grow chrysanthemums.

The late varieties of the newer kinds are not enough fully done to pass upon.

GROVE P. RAWSON.

Chrysanthemum Plants for Store Trade.

Select kinds for pots that make a stocky growth and strong stems. Cuttings should be started about May 1, say potted in 2½-inch pots, and planted out about June 20 in soil that is rich, and not on very low land. Plants should be pinched back as soon as they start to grow, and continuously as growth is made, until August 15. They would need to be lifted about September 15; and potted in about 7-inch pots. It is better to lift and pot plants on a bright sunny

day, and to lose as little time as possible in potting, staking, plunging and watering. They should be potted firmly in the pots and staked with three or four short stakes of willow, birch or some natural wood that won't show, and tied loosely around the outside with strong green thread, and plunged half the depth of the pot in a good sunny exposure, giving plenty of room, no plant touching another.

The soil should be thoroughly soaked, and sprinkled every hour the first few days. The sprinkling should be done less frequently as the plants wilt less, and discontinued altogether when they cease to wilt. I find the best plan for watering the three thousand plants that I handle is to run water pipes into the garden, with plenty of faucets.

Disbudding should be commenced as soon as buds are large enough. Buds on short and weakly shoots are better removed altogether. Plants should be removed to the house in time to keep from frost. Give them plenty of room, just touching each other, air freely and water carefully until plants are in bloom.

All that then remains to be done is to market them, which is the hardest and most important job of all. Size of plants when in bloom should be from one to three feet in diameter, and measure one to two feet above the pot, with foliage down to the pot, or within 6 inches of it for those that lose their foliage most. Plants of this kind should bring from 75 cents to \$1.50 each, at wholesale to the stores. This crop can be followed by lilies or other Easter stock, as your house should be cleaned out by December 1.

Brighton, Mass. WM. H. ELLIOTT.

Qui Pense?

Come boys, let us have just a "drap of the creature;" it is so dry or *wet*, don't you know! The *weather*, really, has little to do with the case—tra-la! The gentleman florist lights a cigar of the brand most conducive to mental exuberance, leans well back in his chair with his pedal extremities well up towards the ceiling—an awfully comfortable position, as you all know—and according to the ancient fable, "He huffs and he puffs, and he blows your house in." He talks a little about deceased politics—"I told you so—Smith was a good fellow, I am sorry he got left, but Jones had more influence, besides a 'bar' to back him up 'so it goes.'"

And then he gets down to business, and it is all 'mum 'mum and extra dry! He talks about 'mums with a very knowing accent—knows all about 'em—he discusses new varieties with a rare flippancy that is charming as it is senseless. All the same this fact confronts you, "mein freunds!" Any chrysanthemum is known only by the way it is grown! The variety that you may condemn is O. K. with another party, and its weak stem as sturdy as an oak, under different conditions.

Among the new kinds that have proved of undoubted merit are Yellow Queen, Marion Henderson, Lady Playfair, Mutual Friend, Minerva, Major Bonaffon, Eugene Dailedouze, Inter-Ocean, Silver Cloud, Miss Florence Pullman, Clinton Chalfant, White Boehmer, Mlle. Therese Rey, Chas. Davis, A. H. Fewkes, Marie Louise, Mayflower, H. L. Sunderbruch, Mrs. Potter Palmer, Richard Dean, Shawmut, Seguisiana, Fisher's Torch, Pitcher and Manda, Mrs. Magee, Amoor, Mrs. Robt. Pitcairn, Mrs. C. Harman Payne, Mrs. Howard Rinek, Georgiana Bramhall, John Shrimpton, Mrs. H. N.

Higinbotham, Constellation, Triomphe de St. Laurent, and anemones Rider Haggard, Nemesis.

Quite a difference of opinion exists as to Mrs. E. G. Hill and Mrs. Craige Lippincott; some praise, others condemn. As to the late varieties, it is too early in the season to report definitely.

The varieties that have been mentioned represent all classes, some adapted to exhibition only, others first-class all around sorts.

GROVE P. RAWSON.

A Commercial Cut Flower Pink Chrysanthemum.

It is just what we are all after. Something that will fill the bill, without the ugly tones of lilac, magenta or violet; that is the common characteristic of most of this class.

At Chicago the judges awarded a certificate to Mrs. S. T. Murdock, from Fred Dorner & Sons, as nearer the ideal than any of the varieties yet known to commerce. It is really a bright rose color of a light tint, if you do not consider my wording paradoxical. The whole tone is even and pure, and this in itself is an improvement. The flower is full, shapely, and plenty large enough, though it is not a mammoth bloom. The habit is compact, good foliage and stem.

Mrs. Potter Palmer is a good sort, but having a lavender tint; still it is worthy of trial for commercial use. Exhibited by the grower, Walz, Cincinnati. Although it has made its bow before the public it was shown last year, still it is little known to the trade. I am pleased with it.

Lady Playfair has proved excellent, in color a lighter shade of lavender pink or blush than the above. The flower is of great size and substance, a splendid shipper, and one of the earliest. An incurved bloom.

Mrs. E. G. Hill is early enough if properly grown, but has several weak points, color rather washy, not a good keeper, and too tall in growth just to suit me. However, my opinion may not be your experience.

G. P. R.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnations Notes.

It is far better to improve the stock you have on hand than to buy every new variety that is offered, and of which you know no more than what you may have seen on the exhibition table or what you may have read of or learned from the glowing descriptions of some shrewd salesman. Selection systematically attended to will build up your stock and do away with the necessity of replenishing your plants with new sorts or old varieties as is often the case.

Now this is not a tedious or irksome undertaking, for a beginning can be made with not over six plants of a kind; this is also better than to attempt more at once. Mark now the plants which show the

greatest vigor both as to strength of plant, its tendency to early flowering and above all, such plants as produce the best flowers. From these plants take the best cuttings. I prefer those from the flowering stem. Keep these cuttings for your stock and separate from all other cuttings you may make both inside and when planted out, not that they will be affected by being near other stock, only to secure you against getting the plants mixed. Every successful seed grower is obliged, if he wishes to improve his stocks or even to keep them up to the standard, to pay very close attention to selection and so must the florist, although the methods of reproducing are very different. I had the pleasure of visiting the houses of a grower who took the variety Lizzie McGowan in hand as soon as he received it and by selecting the best has now a stock that is very much ahead of any others that I have ever seen, and the bloom he sends into New York are always the best. By selection McGowan will lose much of the habit it has of the petals recurling; this I believe is its only fault.

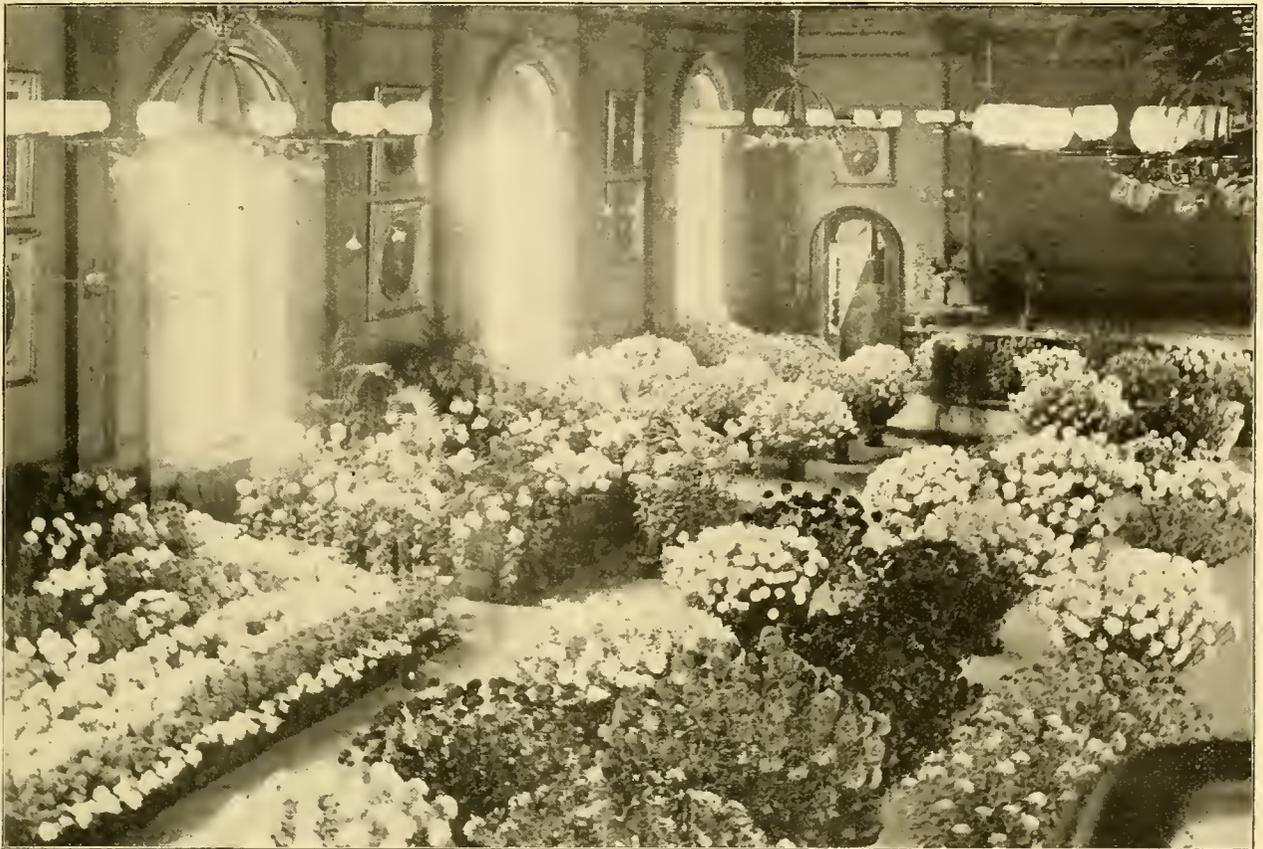

Watch carefully for sports showing improvement. This comes under the head of selection. From whence came The Bride and Bridesmaid roses? Are they not sports and of great benefit to the trade? There is scarcely a bench of carnations in this country in which you will not find sports in some shape. Use judgement, common sense and the results will be to your advantage. I do not wish to be understood as saying that any man in the trade to-day would disseminate a variety which he did not think was a little better than any other yet sent out, but we are a little overconfident as to the merit of our seedlings, and I would strongly advise any grower who can not readily lose the amount of his purchase to buy new sorts with great caution. As soon as he is confident that a novelty will do well in his locality then let him push it for all it will stand. Another point in laying in new sorts is, will they sell? A grower having a local trade has not so much to fear in this line, but for the wholesale market look out. The larger the market, the more critical the buyer as a rule, but all demand the best and the best can only be obtained through selection.

The most popular of new sorts lately introduced to the New York market is Wm. Scott. What few were sold here last year made this a standard variety and the quantity of young plants sold is now showing its effects; even the Greeks get hold of a few. The wholesaler is endeavoring to keep them off the streets but I fear this can be done only for a year or so as it is so remarkable in its growth and blooming qualities here that it will surely run Wilder to the wall.

CHARLES H. ALLEN.

Chester County Carnation Society.

The November meeting of the society was held at headquarters, Saturday, 3d inst., with good attendance. Messrs. Robt. Craig and Geo. C. Watson of Philadelphia were in attendance. Mr. Watson explained the proposed scheme of Philadelphia growers for disposal of cut flowers and read the prospectus of Philadelphia wholesale flower exchange. It is desired that united co-operation be secured before the exchange commences operation. A number of the large growers of Philadelphia have already agreed to back the project with money and consignments. Mr. Craig spoke of the very unsatisfactory arrangements heretofore existing for sale of cut flowers in Phila-

VIEW OF PART OF THE BOSTON SHOW.

delphia by the growers who sell from store to store. The prospectus provides for operations to begin when the approval has been secured of the growers of three-fourths of the cut flower trade of Philadelphia; about half of the stock has already been subscribed, and it is confidently believed the balance will be speedily taken by local growers.

Edward Swayne thought instead of a system of grading flowers each grower's flowers might be sold on their own merits. Mr. Watson explained that there would be more opportunity for equal division of sales if all flowers of same grade were massed and sales of each day divided pro rata among the shippers. By having long distance telephone connection a glut could frequently be relieved by shipments to other cities.

Mr. Craig thought the exchange would be the most economical system that could be provided for sale of flowers. Each consignor being a shareholder would participate in the profits of the business. Mr. Shelmire thought the plan was about what we had been looking for and thought those who were shipping could not afford to stand back, but should promptly give their aid to the project.

Mr. Craig spoke of lifting and potting carnations and holding in a cold frame until the houses of early chrysanthemums were cut, when they were benched. He advised for this purpose Mrs. Whilldin, Mrs. E. G. Hill, Mrs. Bergman and Kate Brown.

Sec'y Shelmire, C. G. Pennock and J. J. Styer were named as a committee to have charge of the flower exhibit of the mem-

bers at the coming chrysanthemum show in Philadelphia. Mr. Craig thought the show would be far beyond anything ever shown in Philadelphia. A number of seedlings were shown by G. W. Love & Son, Hicks & Son, Percy Barnard, and C. J. Pennock. Edward Swayne showed fine specimens of Lillian Abbey on extra long stems, flowers large and bright.

C. J.

New Carnations.

Della Fox (Myers & Santman).—Seed parent Daybreak, pollen parent Grace Wilder; flowers large, of a rose pink color that is three or four shades deeper than Daybreak.

Jupiter (R. T. Lombard).—Delicate pink. Eldorado.—Golden Gate crossed by Cæsar; light yellow of a very pleasing shade, each petal bordered with a light edging of pink similar to a picotee. Petals rather deeply serrated.

Kitty Clover (W. R. Shelmire).—Golden Gate and Cæsar; light sulphur ground lightly pencilled with deepcarmine; white and light red.

Eulalie (Shelmire).—Golden Gate and Cæsar; light yellow pencilled with light pink, petals deeply fringed.

Princess Bonnie (Shelmire).—Mrs. McKinsey and Cæsar; light pink ground marked and pencilled with a darker shade.

Lylene (Shelmire).—Mrs. McKinsey and Cæsar; very light delicate shade of pink; flowers medium sized, deeply fringed and on long stiff stems.

Dr. Warder (Shelmire).—Tidal Wave and Cæsar; a rich shade of crimson

rather darker toward the edge of the petals, which are deeply fringed; flowers of a good size.

Marian (Shelmire).—Angelus and Cæsar; deep scarlet, large flowers with deep fringe to petals. ALBERT M. HERR.

Covering Pansies in Cold Frames.

Please tell me the best way to cover pansy plants in cold frames. I want to cover them with leaves but I don't know whether to let the leaves touch the plants or to leave a space between the plants and the covering. J. D. S.

If it is too large a batch to cover with sash (which it pays well to do) the next best thing is a covering of hemlock branches. Place them on the beds just thick enough to hide the young plants. If the hemlock cannot be had, clean straw laid carefully and not too thickly over the plants will answer. The straw can be kept in place by a few thin boards. WM. SCOTT.

Propagating the Swainsona.

Replying to the inquiry as to the best season of the year to propagate the swainsona, would say that so far we have found no difficulty in the raising of this useful florist's plant from cuttings at any time, excepting perhaps in the very hottest months of the summer. We put in a batch a few weeks ago which are looking very promising. They require no special treatment, rooting as freely with us as carnations, roses, etc.

EDWIN LONSDALE.

New York.

The weather continues to vex and distract those whose vocation it is to make their living by the production or sale of cut flowers, and together with the "general apathy" and the excitement over election succeeds admirably in its discouraging work. There is really no market price for anything and yet those who might under ordinary circumstances take advantage of these (to them) desirable conditions, to wit, the street men, are lying very low and refuse to enthruse.

There are plenty of good flowers. Roses in all desirable varieties, carnations in new and popular sorts, chrysanthemums without end, and violets even are piling in to the market in almost unlimited quantities but the overstock is so great that when good figures are received for a few lots it makes but little impression on the general results and growers are respectfully advised to practice patience and fortitude, there being no alternative for them.

John Reid is sending in from five to eight hundred Perles daily. This rose, so fickle with many growers is with Mr. Reid one of the best and his soil and treatment seem to suit it exactly. This grower also hangs on to Niphetos which also seems very much at home in his establishment.

Louis Dupuy has been bringing in some well bloomed plants of *Erica hymemalis* which give a rich effect in the florists' windows on Broadway. *Ericas*, and orchids dressed with *adiantum* and *Cocos Weddeliana* make an ideal window display.

"The N. Y. Sun" has made a discovery. Here it is: "The best chrysanthemums sell on Broadway for a dollar each. As cultivators would grow rich selling them at five cents each, someone must be making good for the late hard times."

John Ketchum, a Glenwood florist was seriously injured by being thrown out of a wagon when out driving on the night of October 28th.

An uptown florist has designated his shop with the new title of "Botanic Depot."

Boston.

Tuesday, the 6th of November, was expected to furnish some surprises. There had been talk for a month about political landslides and snow storms, but no one was prepared for what did happen, and it is safe to say that the greatest surprise hereabouts was when people got up on election day morning and found the country buried in nearly a foot of snow, the old fashioned article. The *salvias* and *nasturtiums* of the evening before had gone to their last sleep, and the trees and shrubs were everywhere crushed and broken down with their weight of snow and ice, a disaster for which the dazzling beauty of the landscape was but small recompense. It is presumed that after such a dramatic entry winter will now stay with us, and with the increased consumption of coal the price of cut flowers generally will advance. If they do not they ought to.

The last two visits of the garden committee of the Mass. Horticultural Society were to the greenhouses of Mr. Walter Hunnewell, which are in charge of Mr. T. D. Hatfield and the Bussey Institution, where Mr. Chas. J. Dawson presides as gardener, at both of which places were found chrysanthemums in abundance, Mr. Hatfield's comprising many new

varieties and seedlings, and a fine display of large specimen plants, and Mr. Dawson's exhibit consisting of neat little pot plants naturally grown without stakes, and well furnished with foliage and medium sized flowers. As the main features of these collections are covered in the report of the chrysanthemum show at Horticultural Hall further comment is unnecessary here. The company spent a most enjoyable two hours with their knees under the dining table at the Dawson homestead, the logs in the old fashioned fireplace blazing merrily all the while. Happy is he who is Jackson Dawson's guest.

Mr. Wm. A. Bock of Cambridge was a candidate for the legislature on the democratic ticket. Results indicate that he will be free to devote his whole time to the flower business this winter, as in the past.

Philadelphia.

The past week has ushered in some fine varieties of chrysanthemums to add to the already long list and the next few days will see many more, and extra fine they are said to be, placed on the market. Among the late arrivals are the Queen, Vivian-Morel, Mrs. C. Lippincott, Mrs. M. Simpson, Minnie Wanamaker, Ada Spaulding and a number of other kinds in limited quantities, among which are a few fine blooms of Major Bonnaffon from Mr. Lonsdale; he also has had some fine *Niveus*. Jos. Heacock has Mrs. Lippincott in good shape and promises other varieties in extra good condition in a few days. G. Anderson has Ada Spaulding doing well and says E. Dailedouze will be very fine with him in a day or two, other growers also speak well of this fine variety. Mr. Harris has good Ivory and Advance, his own pink, and other varieties, he will commence cutting Mrs. H. H. Battles, a very light pink of the same shape and general appearance of flower as Ivory; he thinks this will be a great seller. Mr. Bunting of 58th and Elmwood has some extra fine flowers; all his varieties are good but his Vivian-Morel are of extraordinary size, many of the flowers being 8 to 10 inches in diameter. From the samples seen, we shall expect to see quite a number of premium cards tacked up on the greenhouse doors at his establishment after the "Greatest Show on Earth" is over. Chas. Evans is also in it, and has a fine lot of the standard varieties in town every day. Robert Craig has a house of the Queen, and a lot of other good sorts.

Mrs. Hill is done; it promised well at first but soon developed into a failure, the color was not right and the stem very weak. As to prices, the best flowers have sold for from \$2 to \$3 per dozen, the latter price for extra selected. The majority of good stock brings \$1.50 per dozen, and the price runs down by degrees from this figure to 20 cents per bunch for small stock.

We should like to say a word about cutting "mums," quite a number of the growers cut their flowers just before they send them in. This plan is wrong, it is bad for everybody, the grower, the dealer and the consumer. No flowers of any kind, except possibly violets, should be placed on the market the day they are cut; they should stand at least over night in water and in the case of chrysanthemums they are the better for being 24 hours in the cellar, without this preliminary training as it were, they do not stand transportation or handling, bruising

very easily and wilting quickly when placed in a warm room. They are then called stale by the average customer and the florist called to make the lot good or lose a customer.

The rose and carnation stock is about the same as last week. Mr. Heacock is cutting some Beauties now that are hard to beat in the market, but then Lonsdale however has not commenced to cut yet; he generally walks off with the prize when he commences. Carnations were never as cheap at this season as they are at present when one considers the quality which is A1. \$1.00 is now asked for the best; last year it was \$1.50 and \$2.00. Double violets are getting better and bring 50 cents per hundred. K.

Chicago.

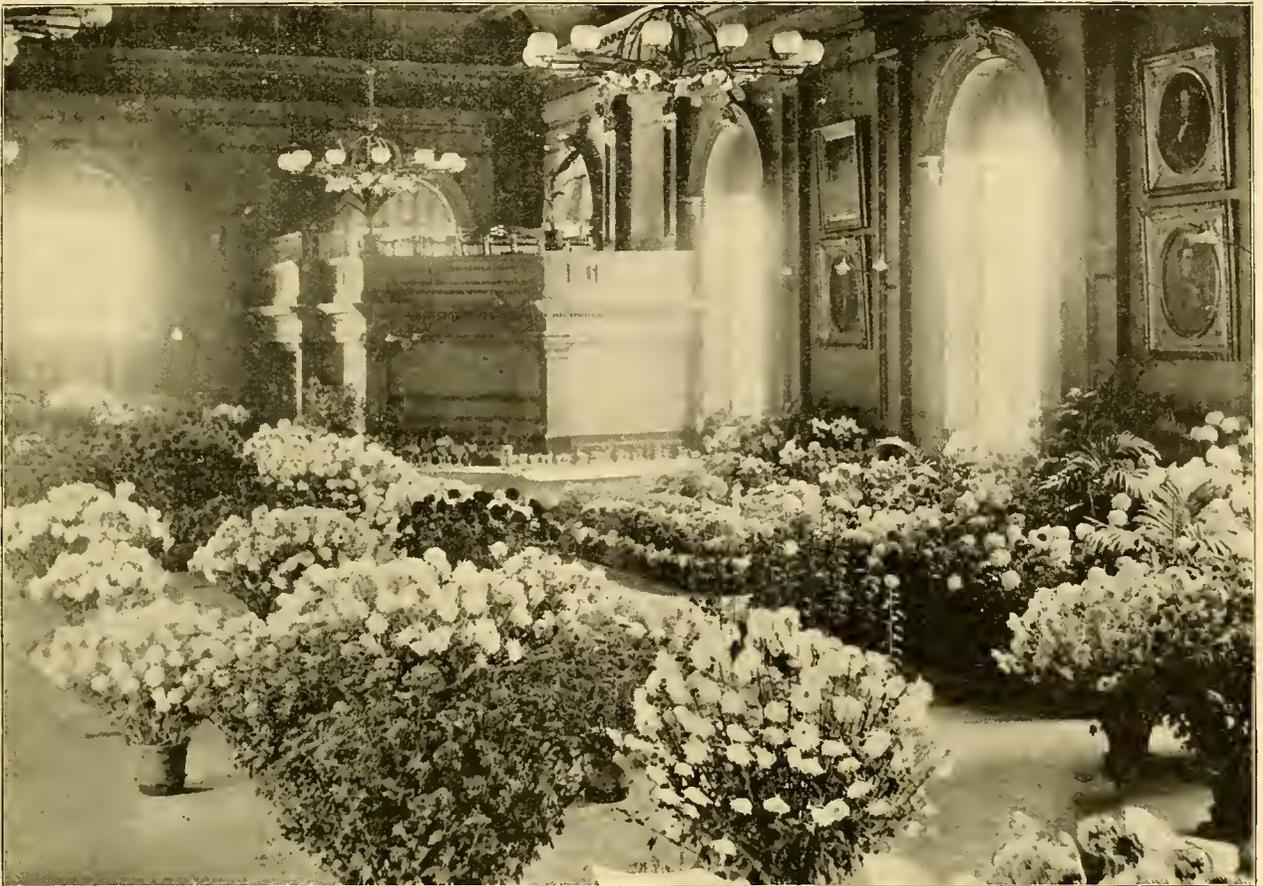

Well, the snow is on, but the much looked for boom in the chrysanthemum line has not materialized to any alarming extent. Simultaneously with the opening of the exhibition a large supply of fancy blooms were thrown on the market; these sold at fair prices, but the poorer grades were not in it a little bit. Of the high class stuff Dailedouze is at the front in yellow; a limited supply of Major Bonnaffon is also very fine, and Lincoln shows up better in general quality than ever noted before. All three varieties are good sellers. In whites The Queen is probably the best at present, but the boys are not over anxious to stock themselves up with it as it drops too quickly. Marie Louise is good, but this form don't seem to take any too well on our market. The old reliable Domination is right to the front, and Minnie Wanamaker is really fine, but after all Ivory is evidently, to judge by the demand, the most popular sort; there is more call for this sort than all the other whites combined. For pink we have some fine Harry Balsley, Lady Playfair and a fairly good supply of Vivian-Morel. There is little or no demand for any of the reds. A few good bronze such as Hicks Arnold go very well, but the majority in the line which might be termed off colors go very slow.

First-class Beauties sell on sight, but the smaller varieties are still in the dumps. The best blooms are being withdrawn for the show and there is considerable kicking by the retailer as regards the quality offered on the market.

In carnations it is much the same. After looking at the show blooms in Battery D the boys are disgusted with having to be content with the inferior article. Still the general quality is fully up to the average.

Violets are plenty. Chas. Northrop of La Grange is sending in some very good blooms, and so are a number of other growers. Valley is quite abundant, in quality of the best, demand good.

Anybody looking for the retail boys at their place of business will look in vain except at an early hour in the morning, when they may be seen wrestling with the all important problem of how to knock down the finest persimmon at the exhibition. The successful ones are noted in another column. But in the afternoon and evening you are pretty sure to find every member of the craft at the show vigorously discussing the decisions of the judges. You needn't ask who are the winners or the losers, just take a square look at them as you meet them, and a question is superfluous. That complacent smile of Joe Curran's on Tuesday tells the story graphically, and so does that of Phil Hauswirth, which he wears on the

VIEW OF PART OF THE BOSTON SHOW.

other side of his mouth. On Thursday the order of things is reversed and Joe wears his smile on the wrong side. But you can't discourage the boys; those that are knocked out to-day bob up serenely to-morrow again. Well done boys, keep it up!

Mr. Rawson heard some "big" blooms would be on exhibition here so he brought along a tape line 100 feet in length for the purpose of making measurements.

At the meeting of the Florist Club Thursday night the new officers were installed. The routine business was quickly disposed of, whereupon refreshments were served. The two chrysanthemum show judges still in the city, Messrs. Rawson and Bennett, were present, and favored the club with their impressions of the Chicago show and Chicago people, Mr. Rawson giving a recitation on the "mum" that brought down the house. Mr. Bennett extended a cordial invitation to all to be present at the S. A. F. convention in Pittsburg next August. Mr. J. M. Gasser of Cleveland was also present, but when called upon to tell the club how they did it in his city, he replied that they didn't do it at all, which fact was much to be regretted.

Among recent visitors in addition to the chrysanthemum show judges were Adam and James Currie, Milwaukee; F. J. King, Ottawa, Ill.; H. Weber, Oakland, Md.; E. G. Hill, Richmond, Ind.; W. W. Coles, Kokomo, Ind.; Mr. Dorner, Jr., Lafayette, Ind.; W. P. Zibell, representing H. A. Dreer; Mr. and Mrs. J. M. Gasser, Cleveland; W. H. Ellis, Milwaukee.

On Wednesday the weather was villainous, and the attendance at the exhibition

was very thin. Thursday was better though still very unpleasant, and the attendance was excellent. Friday the weather was worse than ever.

Annals of Horticulture.

We have received Prof. Bailey's "Annals of Horticulture" for the year 1893. It is now five years since this series of volumes was undertaken. The need of an accurate record of passing events is felt in every department of art and commerce, and our own profession feels this need more and more as its notable movements pass into history. Much valuable matter is already lost, as for example the records of the American Association of Nurserymen for 1878 and 1879, of which we find it impossible to obtain any history. Prof. Bailey's work aims to preserve passing events in horticulture and floriculture, and it will surely be of great value as years pass on. Everything has already been written; the trouble is that so much material is entirely unavailable because it is buried out of sight; we need condensations and indices of material already written more than new matter.

The purely horticultural part of the book under discussion need not be touched on here; it contains imports and exports of fruits and vegetables; crop statistics, etc. The section devoted to floricultural interests opens with an account of the World's Fair chrysanthemum show, giving a full list of the awards. This is followed by a list of the new chrysanthemums registered in 1893. Here we must offer a slight criticism; there are several typographical errors in the names, which

are much to be deplored in a work which must be consulted as an authority on accuracy. We refer to such misprints as Bonnafor for Bonnaffon, Mrs. Craig Lippincott for Mrs. Craige Lippincott, Somersett for Somerset, Dailedouze for Dailedouze, Colloseum for Colosseum, and Mrs. J. Geo. Iils for Mrs. J. Geo. Iis.

In matter printed hurriedly errors are at times unavoidable, but in a permanent record absolute accuracy is an essential.

The American Rose Society is mentioned, but we do not find any notice of the national carnation or chrysanthemum societies. The horticultural and floricultural history of the Columbian Exposition is particularly valuable; it seems likely that Prof. Bailey's book will be the only unofficial record of this department of the exhibition. The displays, awards, judges and arrangements are all fully set forth. The references to the arrangement in Horticultural Hall can be commended for the justness of its criticism. The outdoor gardening is very fully discussed.

In the "Special annals" we find record of all the new plants introduced in 1893, including florists' varieties. We find 26 new carnations, 84 chrysanthemums, 13 roses and 22 sweet peas.

It must be added that Prof. Bailey has completed his book with a very full and copious index. So many volumes, otherwise excellent for reference, are crippled in their usefulness by the want of this feature that it is worthy of special mention. A reference book with a slovenly index is a failure, and we must give Prof. Bailey especial praise for the care bestowed on this.

THE AMERICAN FLORIST

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen, and dealers in wares pertaining to those lines ONLY. Please to remember it.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

J. C. RENNISON, of Sioux City, Ia., has sent us from time to time specimens of printed matter used in advertising his business that show him to be fully alive to the importance of keeping same before the flower buyers of his city. His latest is a neat 4-page folder in two colors on the front page of which appears an engraving of his greenhouses and on the back one of a prettily arranged basket of flowers. The two center pages give current retail prices of flowers, bulbs and chrysanthemum plants. He endeavors to especially cultivate standing orders for \$1, \$2 and \$3 boxes of flowers to be delivered regularly on stated days.

BIGGLE BERRY BOOK, being number two of the Biggle Farm Library, has been recently received by us. It is an excellent little manual of berry culture, illustrated with handsome colored plates. (Wilmer Atkinson Co., Phila., publishers).

SIMON S. SKIDELSKY, formerly with the late firm of Ernst Kauffmann & Co., Philadelphia, is now connected with the firm of M. Rice & Co., of the same city.

CHAS. W. MCKELLAR, of the late firm of Corbrey & McKellar, Chicago, will travel for E. H. Hunt.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

NASTURTIUMS are likely to be on the short list again next spring.

CUCUMBER seed cannot be called scarce even after a dry season when it can be had in large lots as low as 12 cents.

RADISH seed growing in California is somewhat handicapped by unsatisfactory threshing and cleaning arrangements.

CAN SWEET pea seed be carefully grown at 5 to 8 cents per pound is a question some of the jobbing trade are asking now.

THE vitality of California grown onion seed when stored there in an even temperature is retained longer than is generally known.

SPRINGFIELD, MASS.—An attachment has been placed upon the store of A. F. Leonard & Co., seedsmen and dealers in horticultural implements.

VISITED CHICAGO: Mr. Rob't Pommer of D. I. Bushnell & Co., of St. Louis; Jas. O'Neill, W. G. Langbridge, J. M. Kimberlin & Son, W. R. Roache.

A CORRESPONDENT asks for information in regard to probable mail demand for Lathyrus silvestris next season. Will some one volunteer to enlighten him?

THE Portuguese onion growers of Alameda, Calif., produce a high globe onion by growing on loose sandy soil and transplanting the young plants, setting them deep in the soil; they produce the finest market onion in that state.

THE stock of named sweet peas still in first hands in California is roughly estimated at one hundred thousand pounds; evidently there is no good reason for sending out any varieties under name that are not absolutely true,—throw the doubtful ones into the mixtures, many of the best may go there later anyway.

Kansas City, Mo.

A trip around to the florists at this season of the year is generally a pleasant one. The new ideas and resolutions adopted more or less every year, are always interesting as well as instructive.

One of the rarest treats is a visit to the Probst Floral Co. establishment, the success of which is due to the management of Mr. Samuel Murray, who is always capable of showing us something first-class, even to a drop of good cider, and it is said that his commodious cellar is filled with it.

A walk through six houses well stocked with chrysanthemums is worth your while. Mr. Murray has always been successful with his "mums," but this year he has overreached all previous records both in quantity and quality. The "Queen" is grown in abundance, some blooms measuring 10 inches and very perfect. King's Daughter, Jessica, Waban, V. I. Hallock, Ivory and several other good sorts are now in bloom. One bench of W. H. Lincoln in pots is looking very promising. Mr. Murray is growing 5000 in all this year, partly in pots and partly in benches. The carnations and roses are looking first class. A. N.

AUSTIN, MINN.—Our item in regard to the new house built by A. N. Kinsman & Co. should have given the size as 18x60

instead of 16x18. The house has the short span to the south and is planted with roses for cut flowers. The place is now heated by steam.

SITUATIONS, WANTS, FOR SALE.

ENGLEWOOD, N. J.

SELL ALL KINDS CHEAP.

St. Paul, Minn.

Trade shows quite a decided improvement. "Mums" are coming in quite freely. Roses are retailing at \$1 to \$1.50 per dozen, Beauties at \$3, carnations at 35 cents, violets at 50 cents per bunch of 25. Chrysanthemums are retailing all the way from 75 cents to \$3 per dozen. Some extra nice blooms of Mrs. Hill and Marie Louise sold for 50 cents each, but they were choice.

There has been some cutting in prices, some which we think is unwarranted. One large establishment sold roses last Saturday at 50 cents per dozen, while another has advertised them to-day at 25 cents per dozen, and still another offered reduced prices for the Charity Ball, where only the elite go. In Minneapolis a dry goods store advertised roses on Saturday for 15 cents per dozen, and carnations at 10 cents. This general slashing of prices is unwarranted, as there has been no great surplus of any time. We deplore the action of some of our brethren in cutting prices to 25 cents per dozen. While in rare instances where flowers are plentiful such a sacrifice may be warranted it is in general to be deprecated, and if continued will hurt the trade more than anything else.

We regret not being able to report a chrysanthemum show for the Twin Cities this year, but as our florists' association is now an established fact we hope an other year to have as good a show as any of them. We have the plants and blooms and only need the organization to have a good exhibit.

Chas. Johnson is now with L. L. May & Co. in their city store.

Worcester, Mass.

"Mums"? Why, of course, any quantity of them and of any quality that you choose; Vivian-Morel, Col. Smith, Ivory and Mutual Friend are the cream of the lot just now. Price? Why, from fifty cents to four dollars per dozen, and we are selling a great many. Roses are good and plentiful. Lange is cutting some splendid Mermets and Perles; carnations are not coming in very large quantities, but the supply has been equal to the demand so far. Other stuff is in good supply and trade has been very good; prices have been very satisfactory, several large funerals helping to make things interesting.

One of the largest funerals we have had for some time, "floristically" considered was that of Ex-Mayor Winslow on October 24. Among the largest designs were an immense floral skate by Lange, and a six foot trolley car by Wm. H. Johnson.

The weather has been all that anyone could wish for, and we have yet to have our first hard freeze. A. H. LANGE.

CARNATION FLORETS

ALWAYS IN SEASON.

Chas. T. Starr,

AVONDALE, Chester Co., PA.

WE ARE MAKING A SPECIALTY OF THE

New Early Yellow Chrysanthemum MAJOR BONNAFFON.

Came in fine shape October 20, and sold at \$4 to \$6 per dozen in quantity on New York market. Selected strong stock plants (no eyes removed), 35c. each; \$3.50 per dozen.

Our stock of Carnations for commercial growers is unexcelled. We have some 10,000 stock plants of the **Bread** and **Butter** Carnation

WILLIAM SCOTT,

and will be able to produce a fine lot of cuttings without over-propagating. No grower can afford to be without this carnation, as it succeeds generally, and is a worthy successor to **Grace Wilder**.

(If you don't believe this is the pink to grow, ask **Great Scott of Buffalo**.)

We have also fine stocks of

Mme. Albertini, The Stuart, Lizzie McGowan, Daybreak and Thos. Cartledge . . .

And can fill early orders with first-class plants. We shall offer three new varieties this season which promise to prove valuable.

If you are in the market to buy carnation cuttings don't wait too long before arranging for the varieties you want, as we are apt to be sold out later in the season.

OUR STOCK IS WARRANTED AS USUAL.

THE COTTAGE GARDENS,

HOLLY

It is conceded that the successful delivery of perishable stock in the best condition exactly when demand is active is secured only as the result of considerable experience and close study of all the controlling conditions. During the past ten years we have studied these conditions and have the experience. We have faith that we can supply "First-Class Stock on Time," and to prove our faith by our works, on all orders given us in season we will **Guarantee arrival** or no pay. We attempt no competition in price with stock which has never yet arrived, or—arrived after Xmas. "A Case of Holly in front of the store is worth four (4) on the cars."

Cincinnati.

We cannot report any special improvement in business during the past week; prices remain unchanged and demand hardly equals the supply. Beauties remain firm, and all good stock is sold. Carnations are getting much better, stock in the market piling up, and chrysanthemums now have full sway, but at low prices in comparison with former years. Magrie & George are now sending in some choice lily of the valley.

Fred Walz had a funeral decoration a little out of the ordinary recently. The casket was trimmed with lily of the valley and Asparagus plumosus; at the grave the earth was covered with ferns, through which chrysanthemums were used profusely. A basket composed of "mums," carnations and roses was constructed to fit over the grave after the same was filled. The effect was beautiful. He also had several set pieces.

L. H. Kyrk & Co. had a decoration for the Baron Van Horn-Weimar wedding, which was done exclusively in pink roses, as Rose was the bride's name. J. A. Peterson also reports several wedding decorations of chrysanthemums.

One would think that the chrysanthemum was as near perfection as it could be, but the seedlings this year seem better than ever. A Kentucky grower heretofore unknown comes to the front with four new seedlings. No. 1 is yellow, early as Miss M. M. Johnson, a dwarf grower with foliage extending to the bloom, the blooms on the same order as Miss Johnson; No. 2 is a good yellow, medium sized flower, but later, no improvement over existing kinds; No. 3 is a white, on same order as Marie Louise, but no better; No. 4 is the best, a pure white, same style as Queen, equally as large, but does not show the center, which is an improvement; we think this flower will be an acquisition.

W. S. Bell of Lexington, Ky., was in the city recently. Mr. B. gives a chrysanthemum show commencing the 6th and continuing throughout the week. He reports business good and says his show is of great advantage to his trade.

Mr. Killen, representing Z. De Forest Ely, was in the city during the week.

The growers having stands in the Jabez Elliott Flower Market will give a free show and sale of "mums" in said market commencing November 14 and continuing through the week. From preparations being made we shall expect something pretty nice, and trust our florist friends will make us a visit during that week. G.

WHOLESALE CARNATIONS.

CARNATION MRS. FISHER, IMPROVED.

By a careful selection of propagating stock for over four years, I have succeeded in removing the objectionable points that are hovering over this grand Carnation. It is a vigorous grower, a profuse bloomer, bears large, pure white single flowers in long, stiff stems. Is an excellent summer bloomer, and with me has always been free from disease. Am growing it exclusively, with the exception of Grace Wilder.

Rooted Cuttings of Mrs. Fisher, \$2.00 per 100.
 Grace Wilder, 80c. per 100.

Technicalities in Judging a Flower Show.

Rules are given, classes are arranged and the whole minutiae is furnished with the idea of serving the best interests of all concerned, and yet wording is often ambiguous, and *might* mean more or less if it was one's own desire to so interpret the same.

If you are at all in doubt ask the superintendent, and he will set you on the right track. Carefully read rules and regulations, and accept the conditions offered if you see fit to enter as an exhibitor.

When a premium calls for fifty blooms only fifty should be shown; that appears to be simple enough prima facie evidence; but isn't *always* so simple as it looks. Pot plants average a *little* over measurement of pot required; one or two varieties *may* be substituted just to fill out properly, giving a better finish to the whole, and *how* rigid must you draw the line, and observe the "spirit" and "letter" both?
R.

Toronto.

"Mums," "mums" everywhere. The butcher, the baker and the grocery man have got them, every one has got them. And how beautiful they all look too, and what an improvement in the quality of them. When one looks back ten or twelve years and thinks of what used to be grown at that time it brings before one the rapid strides horticulture has made in this country during those years. As to prices, however, mum's the word, although really good bloom fetches a fair price.

There will be a reading room for the boys in the Pavilion during the show with copies of all the leading horticultural papers on the table and if I might make a suggestion I would recommend that it be used as a place where those who are dissatisfied with the decisions of the judges or anything else can give vent to their fulminations without fear of being overheard. This should, however, only be on the first day's program, after that the room should be given up to the reception of visitors, sociability and self-edification. The weather still keeps comparatively mild with a slight frost now and then, no snow has fallen yet—geraniums, cannas, etc. are still alive although the leaves have nearly all fallen off the trees.

About twenty of the boys will go to Hamilton on Wednesday the 7th. The ambitious city grows some tip top chrysanthemums and a good show is expected.
E.

Must Have 'em Earlier.

Here is my latest chrysanthemum yarn: "Mister, 'ave ye got eny of them big white chrys-e-antheums—or whate yees call 'em," blubbered out a big Irish woman in no gentle tones. "Not to-day, ma'am—will have them early next week without doubt." "An' its a funeral we be after havin' at our house, mon, and does yees think we'll be putting it off, just to have them things? Mon, ye've no sinse at all; I'll be going somewhere else."

Oct. 31, '94. G. P. R.

WINONA, MINN.—A chrysanthemum show is being held here by St. Paul's Guild. The leading exhibitors are John Wunder, E. S. Youmans and the Woodlawn Cemetery Greenhouses.

CEDAR FALLS, IA.—A chrysanthemum show will be held here November 14 to 16 under the direction of Jos. Bancroft. The proceeds will go to the building fund of one of the churches.

News Notes.

CARRICK, PA.—Wm. Lauch is adding two new houses to his plant, each 20x150 feet.

WEST GROVE, PA.—Koney Bros. have built two new houses, one 16x80 and one 8x80.

BUTTE, MONT.—Mitchell & Cobban have leased the greenhouses of Mrs. D. J. Knox.

ALLEGHENY, PA.—Johh Bader has just finished two new houses, one 20x100 feet and one 10x100 feet.

LOS ANGELES, CAL. florists report an excellent fall trade and anticipate a good business for the winter.

OMAHA, NEB.—Otto Buseck, florist and landscape gardener, 1918 South Eleventh street, will establish a cut flower store at 16th and Douglas.

LONDON, ONT.—J. Gammage & Sons had a "fall opening" floral exhibit at their store 213 Dundas street September 20. No flowers were sold.

IOLA, KANS.—A. L. Harmon has added a new house 18x30. He will hold his fourth annual chrysanthemum show in the opera house November 15 to 17.

BELLEFONTE, PA.—Mr. Geo. Baldwin has opened a floral store here and is building a greenhouse 20x60 for decorative plants. He will handle cut flowers, plants, bulbs and seeds.

TRENTON, MO.—The 37th annual meeting of the Missouri State Horticultural Society will be held here December 5 to 7. Programme may be had on application to the secretary, Mr. L. A. Goodman, Westport, Mo.

PRINCETON, KY.—R. R. Satterfield has completed two greenhouses 16x80 on the short span to the south style; they will be devoted to forcing roses and carnations. He reports good prospect for the coming winter's business.

MAYFAIR, ILL.—Henry Keller has gone into business here, and will grow for the Chicago market. He has built a block of three connecting equal span houses 21x125, and one carnation house 17x125, short span to the south. Everything about the place is in improved modern style.

MARYSVILLE, MO.—Mr. M. E. Mergen has purchased a piece of land in the heart of the city, 44x132, for \$1,500 cash and has erected one rose house, one plant house, one vegetable house, and will remove his present two houses there too. He also contemplates building a palm house 40x20.

JOHNSTOWN, PA.—Adolph Stahl has bought 2½ acres of land in the village of Fremont, opposite Grand View Cemetery, upon which he has built four greenhouses 20x80, one 10x80 and propagating house 6x32. Also office 16x88 and dwelling house and stable. Mr. Stahl bought out his partner's interest in the old firm about a year ago and has since conducted the business alone.

"Proof of the Pudding"

PITTSBURG, June 11, 1894.

LOCKLAND LUMBER CO., Lockland, Ohio.
Gentlemen:—It affords me a very great deal of pleasure to say a good word for people who really do deserve it. You are the first and only lumber men I ever dealt with that came any ways up to the mark. I have tried quite a number of lumber men. I have been buying lumber for greenhouses for the last twenty-two years, and in all that time I never succeeded in getting the quality or the peculiar shapes and good workmanship, which I was always anxious to have, until I began to buy from you about seven years ago. If there is such a thing as spot clear Cypress free of sap and knots, you surely sell it. I know of what I speak, because I have been in the lumber business myself. I have bought nine different shipments of you and I do believe the last lot was better than the first.

Very truly yours, CHAS. T. SIEBERT.

FLOWER POTS

The Whilldin Pottery Company,

713, 715, 717 & 719 Wharton St., Philadelphia, Pa.

BRANCH WAREHOUSES:

Randolph Ave. and Union St., Jersey City, N. J.
Jackson Ave. and Pearson St., Long Island City, N. Y.

STANDARD FLOWER POTS

Every user of Flower Pots should correspond with us before purchasing elsewhere. Our facilities are unequaled.

A. H. HEWS & CO., N. Cambridge, Mass.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipple Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

SYRACUSE POTTERY CO. OFFICE:
403 North Salina Street, SYRACUSE, N. Y.

STANDARD FLOWER POTS.

We will furnish you with prices on application, and will fill all orders promptly. Our Pots are excelled by none in the market.

"ADVANCE" (Trade Mark.) For Hot Water.

The Chrysanthemum Show in Tokio.

CHICAGO ILL., Nov. 2—To the Editor.—In view of the fact that the chrysanthemum show is now open in this city, it may be of interest to know a little about the greater chrysanthemum exhibit in the land of chrysanthemums. The following item from the *Japan Mail*, of Yokohama, shows that the floral scenes are especially timely, and estimates that Dango-zaka must be an unusually interesting place this year: "Particulars concerning the unusual fine display to be expected this year at Dango-zaka, Tokio, in which reference has already been made in these columns, are now published by the metropolitan journals. The four largest exhibitors are the well known florists, Ueso, Ueju, Ue-nme and Tane-han. The principal scenes that they will florally depict are as follows:

"Ueso—(1) Lieutenant Gunji's party in their first exploring tour after landing on the Kuriles; (2) The death of Captain Matsuzaki in the battle of A-San; (3) An episode from one of the old monogatari. [Story hooks.]

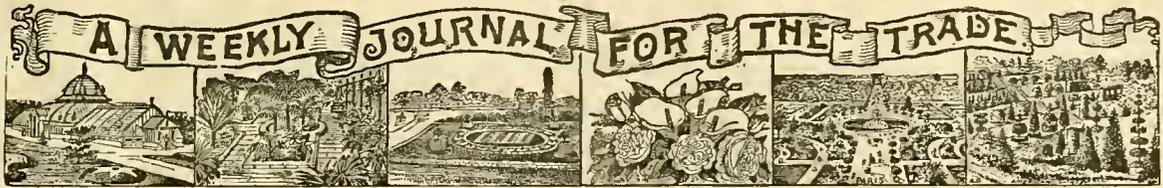

"Ueju—(1) Minister Otori at the gate of the palace of the Korean King, threatened by the native troops; (2) The battle at A-San; (3) A skirmish in the street of Seoul.

"Ue-nme—(1) Muister Otori holding his final meeting with the Chinese Resident Yuan; (2) Battle of A-San and the fight of the Chinese troops.

"Tane-han—(1) The naval engagement of Phung-dog; (2) The sinking of the Kowshing; (3) A scene from Kawakami's melodrama at the Asakusa Theatre; (4) Battle of A-San and spoliation of the Chinese encampment.

"Judging from the above the show ought to be superior to anything that has yet been done, and the vernacular press assures us that this will actually be the case."—Ernest W. Clement in *Chicago Inter Ocean*.

THE BEST TIME to set out a plant is immediately after it is taken up.

WAPPINGER'S FALLS, N. Y.—The entire stock in the greenhouses of H. F. Garrison has been sold to Mr. H. F. Goring.

CEDAR RAPIDS, IA.—I. N. Kramer & Son are building a violet house 6x100. They cut their first Harrisii lilies October 24.

THE EXHIBITIONS.

St. Louis.

The fourth annual chrysanthemum show under the auspices of the St. Louis Florists' Club opened on the evening of November 6 in the art rooms and corridors surrounding Sculpture Hall in the Exposition Building. The change of quarters from the vast expanse of Grand Music Hall to the smaller spaces was most marked and detracted vastly from the first appearance of the exhibition. This was more than made up for, however, in the various and improved staging and arrangements permitted by the abundant wall space, and also the ability of separating rooms not in use and leaving them in the possession of the exhibitors until the display as a whole was complete. The latter feature was much appreciated by exhibitors who were given abundant room and time to stage and arrange their displays.

The attendance on the opening night was slim, owing to the excitement caused by the elections. The displays of plants were all in place and ready to be judged on time. The chrysanthemum plants taken as a whole were not up to the standard set in former shows, with possibly the exception of the standards. The best and closest competition was in the classes calling for market plants, those of Mr. Andrew Meyer being as near perfection as is possible to grow them.

The cut flower display on the first day was quite good, the chrysanthemums, however, did not come up to those staged later in the week. In 20 flowers, white, 4 sorts, the first went easily to W. J. & M. S. Vesey, whose Wanamaker, Queen, Niveus and Mrs. Robert Craig were the center of attraction. E. G. Hill & Co. came second showing fine blooms of W. G. Newitt and Mrs. J. H. Starin; Michel Plant and Bulb Co. third. In same class as above except calling for yellow Hill & Co. were first, showing fine Dailedouze and Challenge, Michel Plant and Bulb Co. second, Wm. Schray third.

For 20 flowers, pink, 4 varieties, Hill & Co. were again first with specimen flowers of Mrs. W. Trelease, H. Balsley and Roslyn, Wm. Schray second, and Michel Plant and Bulb Co. third.

Best vase white carnations, 40 flowers, was captured after a strong competition by vase of Lizzie McGowan shown by Wm. Schray, Frank Fillmore being a close second with the same variety, and Thos. E. Carroll third. Best vase pink carnations, 40 flowers, was taken by Wm. Schray with fine flowers of Wm. Scott, Daybreak shown by C. Young & Sons Co. second, and Mrs. Reynolds shown by Thos. E. Carroll third. Premium for best vase of variegated carnations, 40 flowers, was taken by Thos. E. Carroll with Helen Keller. Best 24 plants of carnations in bloom was taken by F. J. Fillmore with strong plants of McGowan, H. Keller, Albertini, E. A. Wood, Garfield and Tidal Wave, the plants being in exceptionally good shape, second was awarded to Wm. Schray.

The Shaw medal offered for a plant of decided merit for cultivation, not previously an article of North American commerce, was not awarded, the seedling chrysanthemums shown for it were not in the opinion of the judges sufficiently in advance of varieties in the hall to merit the distinction of having the award. The most promising shown were Carmen Sylva by C. Young & Sons Co., it being their earliest white for the past two years, and consequently in poor shape this late in the season, and Golden Beauty, shown by Wm. Schray, the latter being a large yellow flower, reflexed, but the center well covered and twist enough in the petals to make it graceful.

The Shaw prizes for plants were awarded as follows: Wm. Schray first for collection of palms, showing about 25 varieties in good shape, C. Beyer second. For collection of begonias Michel Plant and Bulb Co. were first with a large and varied collection, principally Rex varieties; Wm. Schray was second with a good collection, the plants individually were better than those winning first but the variety was not shown, F. J. Fillmore third. Michel Plant and Bulb Co. were also first on collection of ferns, showing in their collection some fine specimens, Julius Koenig second with a good assortment. In foliage plants Wm. Schray was the winner with a fine group of varieties, every plant being able to stand alone, Michel Plant and Bulb Co. second, and C. Young & Sons Co. third. C. Young & Sons Co.'s plants were the finest shown, but owing to the smallness of the number of varieties were forced to take third place. The class calling for 25 blooming plants for house cultivation, exclusive of chrysanthemums, called out five good exhibits; Wm. Schray was deservedly first with finely flowered plants of the varieties shown, and C. Young & Sons Co. second. Among Schray's plants were noted fine specimens of bouvardia, begonia, mignonette, heliotrope, eupatorium and heterocentron. Among the palms first was taken for specimen Arca

Intescens by Alex Waldhart with a fine plant in 10-inch pot; first on Kentia Belmoreana by Wm. Schray, Alex Waldhart being a close second. First on Pandanus utilis went to Alex Waldhart with a specimen about 10 feet high, the second plant in this class being a perfect specimen but too small to equalize matters. Best specimen decorative plant other than the above was easily taken by A. Waldhart with a Rhaps flabelliformis, second going to the C. Young & Sons Co., who showed a standard laurel.

Prizes awarded the second day as follows: Best 45 flowers, chrysanthemums, first, W. A. Chalfant, Springfield, Mo., second Hill & Co., third Michel Plant & Bulb Co.

In largest and best collection of cut carnations first was taken by Wm. Schray, second going to Thos. E. Carroll, F. J. Fillmore third. This was the first day cut roses were called for, and presumably on account of the way the election had gone the day before, the exhibitors were unable to count properly the number called for, four entries being ruled out of competition owing to there being either too many or too few blooms. On Brides C. Young & Sons Co. were first, R. F. Tesson second. Bridesmaid, R. F. Tesson first, C. Young & Sons Co. second. First on American Beauty R. F. Tesson, C. Young & Sons Co. second. La France, C. Young & Sons Co. first, R. F. Tesson second. C. Young & Sons Co. took first with Duchess of Albany and Mme. Watteville without competition, also first on any other variety with Sunset. In five varieties, ten of a kind, both C. Young & Sons Co. and R. F. Tesson were ruled out of competition owing to one having 11 and the other 9 in a vase calling for 10. R. F. Tesson took first, however, with a duplicate entry.

For best mantel decoration of plants and flowers C. Young & Sons Co. received first prize, Bucksah & Berning second, and Michel Plant and Bulb Co. third. Young's mantel was a double shelf with mirror between; the upper shelf was banked with adiantum and cocos, valley being used against it, vases of Testout roses standing on the corners; the lower shelf was banked with various adiantum and La France roses scattered throughout, the corners being of orchid flowers which twined up the end supports to the upper shelf, the space between top of mantel and ceiling being festooned with smilax and roses. The lower part of mantel and grate was banked with chrysanthemums. Bucksah & Berning's mantel was also a double shelf with mirror between, the sides and two shelves were banked with adiantum, cocos and Rex begonias, while standing above the green were Golden Wedding chrysanthemums. The fireplace was also banked with ferns and decorated with Golden Wedding. The Michel Plant and Bulb Co.'s mantel was also a double shelf mantel and was banked much as the others with ferns and palms; various colored "mums" were used in setting off the green, and orchid flowers on the ends of the shelves, the base being banked with chrysanthemums. Banks of palms extended from the sides several feet each way, gradually approaching the floor.

The chrysanthemum classes called for on Thursday proved to be the finest specimens and the closest competition ever seen here. Best 25 blooms one white variety called out seven magnificent vases, principally Queen, first was taken by W. J. & M. S. Vesey with the finest specimens of Queen ever seen here, second being taken by Wm. Schray, and third by C.

Young & Sons Co., both showing Queen. In 25 yellow there was a hard matter to decide between Golden Wedding, Eugene Dailedonze and W. B. Smith, Michel Plant and Bulb Co. finally winning with Golden Wedding, E. G. Hill & Co. second with Eugene Dailedouze, and E. W. Guy of Belleville third with W. B. Smith. In 25 blooms of one pink variety Richard Frow won with the finest vase of Vivand-Morel that have ever been seen here, they being simply perfect in size, color and foliage. W. A. Chalfant of Springfield, Mo., second with Pres. Smith, Hill & Co. third with Harry Balsley. In best 25 flowers of one variety, introduction of 1892 93-94, Michel Plant and Bulb Co. were first with H. Sunderbruch. Challenge, shown by Hill & Co. was second, and L'Enfant des Deux Mondes shown by C. Young & Sons Co. third.

The competition in cut roses on Thursday was close and developed several surprises. Best Meteor was captured by C. Young & Sons Co., who seem to have a knack of growing that variety; R. F. Tesson second. Best Kaiserins, R. F. Tesson, no competition. First for Perles C. Young & Sons Co., second Frank Fillmore. Mme. Testout, R. F. Tesson first, C. Young & Sons Co. second. Catherine Mermet, R. F. Tesson first, C. Young & Sons Co. second. Frank Fillmore won first on Woottons, this being the prize he has been watching for some time; C. Young & Sons Co. second. First for Mme. Hoste R. F. Tesson; C. Young & Sons Co. second. R. F. Tesson took first for Cnsin, and C. Young & Sons Co. first for American Belle without competition.

The parlor decoration called for brought out the three firms who showed mantels the day before; the parlor decoration was built so as to include the mantels, these in some cases being slightly changed. First was won by the C. Young & Sons Co.; their mantel remained the same as the day before, the base being changed, however, giving it a lighter appearance. The room was profusely decorated, in fact the criticism heard most was that it was too elaborate. Streamers of smilax ran from the chandeliers to the sides of the wall, the chandelier itself being draped with smilax and roses. Placques of camellia leaves bearing bunches of Bride and La France roses were suspended on the walls; the mirror was twined with smilax and roses and banked with chrysanthemum plants. Palms and other decorative plants were set around the base of the walls. Bucksah & Berning's mantel was changed, the chrysanthemums used the day before being removed and their place filled by American Beauty roses. Their parlor all through consisted of Beauties with the exception of two placques of white chrysanthemums upon the walls; the mirror was decorated with smilax, while vases of Beauty roses were stood in front of all windows. Chandelier was also draped with smilax, and plants banked against all openings; this received second prize. The Michel Plant and Bulb Co. was third with a decoration of chrysanthemums. Their mantel remained the same as the day before, the sides being banked with palms, smilax was used for draping openings, and several mounds of chrysanthemum flowers were scattered throughout the room.

The special premiums scheduled for Friday called out keen competition, which was much appreciated by the visitors. The premium offered for best vase of chrysanthemums was won by W. J. & M. S. Vesey, the vase being arranged by Mr. Fred Weber. Best vase of assorted chrysanthemums was won by the Michel Plant

and Bulb Co. C. Young & Sons Co. captured first on best vase of Beauty roses, winning on artistic arrangement. For largest and best assortment of chrysanthemums arranged in vase Wm. Schray staged some fine flowers and won. For largest and best assortment of carnations arranged in a vase first was awarded to Thos. Carroll. Best 25 specimen blooms of chrysanthemums, different varieties, first went to Hill & Co. with a remarkably good vase of exhibition flowers.

E. G. Hill & Co.'s prize for 12 finest blooms of varieties first disseminated in 1894, one or more kinds, went to Wm. Schray, who showed Pitcher & Manda, Eugene Dailedouze and Marie Louise, second going to E. W. Guy of Belleville.

First on best vase of pink roses exclusive of Beauty and Belle, was taken by R. F. Tesson with a magnificent vase of Testouts, without doubt the finest vase of roses shown during the exhibition. C. Young & Sons Co. took first for best vase white roses with Kaiserin. Taking the show all in all we have never had a finer exhibition, and at the same time never a more losing venture. R. F. T.

Baltimore.

The first day of the show was about as disagreeable as the weather clerk could get up, or a cold, penetrating rain and a sharp wind could make it. For all this the boys were out in time with their wagons full, and by the time the committee in charge had finished placing the row of tall cedars and spruces that formed the background around the interior of the building the floor was beginning to be pretty well filled with plants.

The fears of the growers that blooms on plants would not be open in time for the show were only too well founded, as the untying and removing the wraps proved, for, with very few exceptions, the flowers on the bush plants were not more than half open; some of the exhibitors, in order to make up collections, having been compelled to put in plants with flowers that were mere buds, not much more than showing color. The single stem plants were brilliantly different from the rest of the exhibition in this respect, and with the really fine standards redeemed this feature of the show from a very decided mediocrity, not to say inferiority.

The general appearance of the huge circular interior was spoiled by some over-patriotic partisan who had draped or rather papered or plastered the whole wall down to within ten feet of the floor with red, white and blue bunting plentifully sprinkled with stars for a political meeting which was held Saturday night, and which the committee had no time to replace by a less gorgeous color. The general arrangement of the exhibits was much the same as last year, the tables for cut flowers being around the entire circumference of the hall close to the wall, the column that supports the centre being concealed by a circular group of large *Areca lutescens* sent by Mrs. M. J. Thomas, and the plants being grouped according to number in the premium list, all the entries for a premium being placed together. The first table to the right on entering contained the entries of carnations, six vases, twenty-five blooms each, first in which was taken by Messrs. H. Weber & Sons of Oakland, Md., with Lamborn, Mrs. Reynolds, Portia, Pride of Kennett, Scott, J. J. Harrison. The first in the next lot, display of carnations, was taken by the same firm with Helen Keller, Century, Edna Craig, Butterfly,

GROUP OF CHRYSANTHEMUMS AND OTHER PLANTS AT THE BOSTON EXHIBITION.

Chester Pride, L. McGowan, Lamborn, Daybreak, Sunrise, Richmond, Mrs. Fisher, Tidal Wave, J. J. Harrison, Mrs. Reynolds and Wm. Scott, all very good, as in fact was the whole of the carnation exhibit. The same firm too took first on vase of whites, vase of red, vase of crimson and vase of pink, but the vase of yellow was taken by Mr. Thos. Patterson with a lot of very fine Golden Gate, while the best vase of striped was shown by Mr. P. Campbell Erdman.

Next to the carnations came a lot of very fine chrysanthemum flowers that took second for twenty-five cut blooms in twenty-five varieties, beautiful flowers all, but very carelessly staged, many of the lot being singly in stone jars with mouths five inches wide, the space around the stem being occupied by bunches of brown paper or newspaper projecting above the top of the jar. This crime against an indulgent public was nearly as barefaced in the next lot which took third in the same class. If this is to be continued it would be advisable to insert a rule in the next schedule throwing out all exhibits improperly or offensively staged. There can be no excuse for such neglect, as there was nothing to prevent several blooms being placed in one vase even if no better receptacle than stone jars could be had. A slight varia-

tion on this was shown in the next lot, where excelsior was used instead of paper.

Next to these came the orchid exhibit of Brackenridge & Co., who took advantage of a large evergreen tree behind their display to extend it by hanging blocks of *laelias* up among the branches.

Next along the wall came the booths and stalls for selling flowers, in front of which were two tables containing the entries for vases of cut chrysanthemums and the special prize for Maryland grown seedling. First came the vase of whites, in which Mr. E. A. Seidiwitz carried off the honors with twelve grand blooms of Queen. Next the yellows, where the same gentleman took first with Golden Wedding; this variety by the way seems entirely free from any disease here as yet, and all specimens shown were as clean and healthy as any other variety. The vase of pink that took first was Maud Dean, large, strongly incurved and of much the same tint as L. Boehmer, shown by Mr. C. Hess. Then came a vase of Col. Smith from Lehr Bros. that took first in bronzes, and then came four great clusters of varieties from Pitcher & Manda, the first composed altogether of their namesake, the next containing Annie Sturges, a perfect globe of broad petals incurved and clear yellow, but on a very weak stem; Mrs. E. O. Wolcott, as com-

pact a ball of thickly set light rose petals as one could imagine, borne on a very strong stem; Mrs. B. Cutting, such an exceedingly thick set mass of reflexed petals that one wondered whether it would be possible to have another petal inserted. Undoubtedly their Pitcher & Manda was the most striking novelty shown in the building, the clear yellow centre contrasting beautifully with the pure white composing the outer half of the face of the flower. Then came the vase arranged for effect by Sam'l Feast & Son, which was awarded first prize; the flowers were arranged with sprays of *Asparagus plumosus*.

Next in order were the sprays, where Mr. Paul Bender took the honors. Then a vase of enormous blooms of Philadelphia, a globular incurved white with slight tint of yellow, strong stems and broad petals, sent on by Mr. Hugh Graham for exhibition. A seedling shown by Fisher & Ekas was named Baltimore Belle, bluish white incurved, very full, rather flattened in outline, and borne on a strong stem.

After passing along in front of the stand for the musicians the exhibit of decorated tables and mantels was reached. Here was a display of good taste and fine flowers such as is not often excelled. The table that carried off the honors was by

Sam'l Feast & Sons, and had a low mound of enormous Vivian-Morel and *Adiantum cuneatum* in the center; radiating from this were four bands of *Adiantum Farleyense* with blooms of the same chrysanthemum lying in the fronds, and terminating in bows of broad pink ribbon of a similar tint. At the plates were long and short stem Vivian-Morels alternately, the long stemmed ones having bows of narrow pink ribbon on the stems. Altogether the effect was very fine and as light as possible with such huge flowers for material. The table that was awarded second place was by Halliday Bros. and was circular in shape too, the centre being mounded with Mrs. Craig Lippincott and *Adiantum cuneatum*; a bunch of single white or daisy chrysanthemums laid in one side of the mound was a mistake, as, though a pretty flower by itself, in connection with the monster blooms of the rest of the decoration it looked common. The third entry by Mr. E. A. Seidwitz, while very prettily decorated, had a too obtrusively artificial arrangement of mirrors under the flowers, and was not as carefully set as the others, the cloth failing to cover the table by some inches.

The mantel that carried off the first premium was very tastefully decorated by Halliday Bros. with tall arceas on one side, the leaves reaching well above the top. On the same side, with the stems partially concealed by the palms a few large Golden Weddings were arranged in a sort of spray, the flowers showing one above another quite loosely and effectively. The shelf was banked with *Adiantum Farleyense*, while in the fireplace and all around the group of tall palms on one side and short ones on the other was a bank of *Adiantum cuneatum*. There were four mantels entered, and not one of the four was carelessly or tastelessly decorated, in fact the others erred rather on the side of too much care than too little. They were by Messrs. Feast, Seidwitz and Graham, and were all very well done indeed, and must have given the judges for the second day, Messrs. J. N. May, J. H. Taylor and J. H. Small, some trouble before awarding the second to Sam'l Feast & Sons and third to E. A. Seidwitz, which they did.

The brightest break among the plants on the floor was the single stem lots, which were all very well grown and mostly fully blown. First for twelve varieties, single stem and bloom, was taken by Jas. Simpson. First for six varieties, single stem and flower, by Philip D. Welsh. The same classes for amateurs employing gardeners were awarded as follows: First for twelve varieties to W. Paul Bender, first for six varieties to C. M. Wagner.

The standards were very well grown, the plant that took first being Good Gracious, seven feet high, showing three feet of stem and bearing a globe of flowers three feet in diameter, grown by Mr. C. M. Wagner. Mr. P. D. Welsh was first for collection of three standards.

The roses exhibited were very fine, particularly a vase of Kaiserin shown by Mr. C. Hess. In this exhibit was a grand vase of American Belle from Mr. John Burton of Philadelphia.

Mrs. M. J. Thomas received a special prize for palms. M. A. Hanske received prize for one specimen palm, Fisher & Ekas for collection of begonias, I. H. Moss for collection of decorative plants. The judges were John Burton, George Huster and W. J. Colflesh, all of Philadelphia.

The wedding design which took first in

the Wednesday division was by Brackenridge & Co., and in shape resembled a large horseshoe of white chrysanthemums with a horn of plenty pouring a flood of large pink "mums" out through the horseshoe. The bridal bouquet which received the first premium was shown by the same firm, and was a loose cluster of Bride roses and *Adiantum*.

On Thursday the funeral work and baskets were staged, and in this as in the preceding list the competition was very hot. Mr. F. G. Burger took first with a large basket of Queen and Maud Dean, with *Adiantum* fronds and a bow of white ribbon on the handle. The same exhibitor took first in funeral design with a huge wreath of the same varieties tied with white ribbon. The judge for bridal work was Mr. Otto Bauer from Washington; for the baskets and funeral work Mr. W. J. Halliday of North Charles street.

The entries for dinner table pieces on Friday were all very well done; the piece that took first was a mound of very large loosely arranged Maud Dean chrysanthemums with *Adiantum* fronds, sent by President F. G. Burger. All the entries in this class were pink except that which received second, a six pointed star from Mr. Robt. Graham, the center of which was Pres. Wm. R. Smith and the rays Domination, the clear white of which contrasted with the yellow center very prettily.

The corsage bouquet that received the first premium was a loosely arranged cluster of La France buds by President F. G. Burger. Take them all in all the cut flower exhibits were very fine and attracted crowds from the first day to the last. The competition continues very strong notwithstanding the fact that several of the most prominent competitors last year failed to send anything at all this; and altogether there was very little grumbling among the disappointed ones, though there was some little discontent with the awards for Thursday. The net results of the show were a surprise to those faint hearted members who predicted a failure, as the crowd was as great as could have been expected considering the weather, even if there had been no rival attractions, and while the financial success may not have been as remarkable as last year's, yet the fact remains that we have had a successful show, while opposed by a strong one man show and a society event of the first magnitude, i. e., the horse show.

Speaking of the one man show, that of Mr. John Donn held at Lehman's Hall, it can only be said in justice to Mr. D. that it was as good a show as one man could get up. The pretty hall was filled to overflowing with grand plants grouped as tastefully as possible. One great advantage of a non-competitive show was seen in the harmonious grouping of the plants, which were placed just where their size and color would tell. Singularly enough the flowers here were all in fully expanded condition with very few exceptions. The stage was banked with large *Pandanus* and chrysanthemums and formed a very pretty picture. Along either side of the hall single specimens were placed at intervals, and the groups on the floor were arranged around a central group of fine palms. It would be hard to select individual plants to praise where all were uniformly excellent, but his G. W. Childs were particularly fine, as were also Pres. W. R. Smith and Vivian-Morel. The lack of attendance at this show was no doubt due to the lack of the excitement of competition as much as to

the absence of cut flower exhibits, and if Mr. Donn could stir that up by offering premiums among his customers he could probably secure a very satisfactory attendance.

Reports from the Frederick show seem to indicate that Maryland is "in it with both feet" this year as far as holding chrysanthemum shows is concerned.

MACK.

Denver.

The second annual chrysanthemum show of the Denver Florists' Club was held in the Gettysburg Building, opening Wednesday, November 7, and lasting through the week. The building was tastefully and beautifully decorated with evergreens and festooning. In the center was a large booth in charge of the Flower Mission, where some of Denver's fair daughters, arrayed in Japanese costumes, sold chrysanthemum blooms. A string orchestra playing both afternoon and evening was an addition much appreciated by all the visitors. The attendance the first two days was not quite up to that of last year, but both Friday and Saturday the show was visited by large numbers of Denver's four hundred and others, and the special attractions were surrounded by crowds both afternoon and evening.

Never has it been our pleasure to see such an advance in the culture and exhibiting of flowers as has been made by the florists of this western city, for no one would have dared predict, from the show of last year, that in twelve months there would be here shown chrysanthemums and roses that would astonish many eastern experts, and would carry off many premiums if staged in any eastern city. The specimen blooms were a revelation to the residents, massive blooms of all the shades known to chrysanthemum lovers were shown by Mrs. R. Mauff, the Colfax Floral Co., J. L. Miller Floral and Nursery Co. and C. R. Gallup, the former showing a shade the better flowers, and taking a majority of the first prizes. Golden Wedding was shown in magnificent form and foliage, and sustains the claims of its disseminator and early admirers. Nivus was grand and the twelve blooms awarded first premium for the best white were as fine as your correspondent has ever seen. Mrs. Jerome Jones and Harry Baisley were beautiful, and Miles A. Wheeler was shown in such excellent condition and form that many eastern growers would have wondered if a new variety had not just sprung up. The bronzes and reds were not so good as in some of the other cities, owing, perhaps, to the great abundance of sunlight, for we have not seen a cloudy day since the first of September.

The plants shown were a great improvement on those of last year in many respects. The tall gawky plants were noticeable by their absence, and some very fine low, bushy plants, with foliage clear to the pot, covered nearly half the floor space of the large building. The Colfax Co., Mrs. R. Mauff and J. L. Miller Co. were the largest exhibitors, and each captured several firsts, the first named taking the lead.

Collections of palms containing many fine specimens were shown by C. R. Gallup, Colfax Floral Co. and Mrs. R. Mauff, the prize being awarded to the last named. In this exhibit was shown a fine plant of *Acanthophoenix criuata*, a small graceful specimen of *Areca Verschaffeltii*, and a large *Phœnix reclinata*

ANOTHER CORNER AT THE PHILADELPHIA SHOW.

in splendid condition. In C. R. Gallup's collection was a beautiful *Cocos Weddelliana* and a large handsome *Kentia Belmoreana*. In the exhibit of the Colfax Co. were two very handsome *Areca lutescens*.

The prize for the most artistic grouping of stove and greenhouse plants brought out a very handsome collection from Mrs. R. Mauff arranged in pyramidal form. Begonias, small arecas, marantas and aspidistras at the base, topped by fine kentias and *Ficus elastica*, and at the apex a beautiful *alocasia*.

The display of roses, carnations and violets on Thursday was exceedingly good, and the competition between the Colfax Co., H. H. Given, Mrs. R. Mauff, C. R. Gallup and the J. L. Miller Co. was very close. The Beauties were grand and of fine color. *La France* was excellent, and far better than usually shown in the east. *Mermets* were very light in color, but *Bridesmaid* was in fine condition and of beautiful shade. C. R. Gallup took first on *Wootton*, *Meteor*, *Niphotos*, *Bennett*, *Bridesmaid* and *Sunset*; H. H. Given on *Mermet*, *Kaiserin*, *Duchess of Albany* and *American Belle*; the Colfax Co. on *Beauties*, *Brides*, *Perles* and *Testouts*, and Mrs. R. Mauff on *La France*. Mrs. Mauff succeeded in making a clean sweep of the carnation prizes, showing fine *Portias*, *Wilders*, *Daybreaks* and *McGowans*.

The silver cup offered for the best seedling carnation was awarded to a fine large crimson named *Denver*, exhibited by August Schenkel. This exhibiter also

won first on violets, showing a fine large bunch of good dark color. The plate of pansies shown by the Miller Co. was excellent.

Friday was the day for table and mantel decorations, which were judged by five of Denver's representative ladies. This contest brought forward five very handsome tables, and four beautiful mantels. C. R. Gallup captured both firsts and the Colfax Co. both seconds. Mrs. Beers, wife of the proprietor of the Colfax Co., received many congratulations from her friends, as this was her first attempt at exhibiting.

The attraction for Saturday was floral work, prizes being offered for bouquets, baskets and designs, and in this department Denver is behind the best floral work of the east. The work is, with but few exceptions, too compact and too solid. The J. L. Miller Co. showed two very fine baskets, one of roses and one of chrysanthemums, receiving first in both classes. Mrs. R. Mauff was awarded first on funeral design, hand bouquet and original design, the latter being a representation of music stand and parlor lamp combined. Mrs. C. R. Gallup was first on bridal bouquet.

Two contests that added a great deal of merriment and interest were the potting contest on Friday evening and the bouquet making on Saturday evening. In the former five young men employes of the different floral establishments competed, the prize of \$25 being awarded to E. J. Johnson of the Colfax Co. In the bouquet contest there were four competitors, each one being given a box contain-

ing flowers, ferns and twine, from which they were to make a flat bouquet, each box containing as near as possible the same quantity and quality of each. This was won by Mr. Thornton, representing Mrs. R. Mauff.

Elijah A. Wood judged the chrysanthemums and E. Glauber the roses and carnations, and both together the floral work. E. A. W.

Indianapolis.

The weather was miserable all the week, sleet, cold wind, and lots of politics. Election week seems to be bad on entertainments anyway. The auction sale on Saturday was very interesting, every plant and flower being sold by 3.30 in the afternoon, and the hall cleared of everything except decorations by 5 p. m. The decorations will remain up for coming amusements.

The ice palace, with all kinds of fruits, etc. frozen in through the different blocks made a beautiful attraction. Attractions of this kind seem to be needed to draw many kinds of people. It seems necessary to make the show half a circus, or make it a social affair, something fine and expensive to draw the "400."

Among the later awards W. W. Coles received first prize for a display of cut roses, Henry Rieman second. Mr. Coles received first for a basket of chrysanthemums, John Hartje first for a floral vase. Bertermann Bros. received first for a table centerpiece, Anthony Wiegand first for floral design. E. G. Hill & Co. receive

first for 10 blooms pink chrysanthemums, and Henry Rieman carried off the sweepstakes prize, a silver cup, he having taken 16 first premiums. A certificate was awarded to the new chrysanthemum Mrs. Potter Palmer, shown by Fred Walz, Cincinnati. The new seedling Philadelphia attracted a great deal of attention, particularly under artificial light. A bunch of *Chrysanthemum frutescens*, sent by Grallert & Co., Colma, Cal., suffered during the long journey, and was unfit for exhibition.

The M. A. Hunt estate, represented by Mr. Charlie Hunt, showed some excellent Bridesmaid and other roses. Mr. J. N. May's new rose Mrs. Pierpont Morgan, was received; owing to the length of time it had been cut decision could hardly be passed on it, but it was considered a beautiful shade of pink and a promising variety. Siebrecht & Wadley's new rose Belle Siebrecht was not considered of sufficient size or quality to be judged or commended; they came too late to be put in cold storage to revive.

A display of greenhouse building material was made by the Lockland Lumber Co., and an exhibit of florists' paper roses by the Dayton Paper Novelty Co.

The fruit display by the Indiana Horticultural Society was very extensive, five long tables being filled with very good apples, grapes, pears, etc. The Society proper met at the State House in their rooms November 7 and 8 in annual session.

The judges were very particular in regard to count; some excellent displays were ruled out in favor of some displays not up to standard. Points of quality should have overbalanced miscount points, in the writer's opinion.

Chrysanthemum blooms are getting so big and stems so long that it is hard to get suitable vases and jars. The headwork and trouble in raising large plants seems to be the rock on which many shows fail. Good large plants make a splendid attraction.

Figuring does not seem to help up the cash supply. A small deficit is in sight,

THE BANQUET.

Wednesday evening promptly at 9 o'clock a stream of people wearing red badges and some of them struggling along with large "mums" on their persons could be seen making their way to the Commercial Club Building. The large dining hall was elegantly decorated for the occasion, the long rows of tables being profusely enlivened by wild smilax, center floral pieces and cut flowers. Just 102 sat down. After doing the splendid menu satisfaction, Mr. H. N. Spann, an amateur florist and a good speaker, welcomed the visitors and invited guests in behalf of the Huntington Seed Co. Mr. J. D. Carmody responded in his usual happy manner, he especially commended the idea of having ladies to participate in these banquets. Mr. W. W. Coles responded to the toast, "Indianapolis" and what he thinks of it. Mr. Wm. Langstaff, "Politics and flowers," E. G. Gillette on his experience in visiting Indianapolis chrysanthemum shows.

Mr. E. G. Hill, just arrived from Philadelphia, spoke on the Chicago and Philadelphia shows, making pleasant remarks on both, coming to the conclusion that the advance in chrysanthemums this season is wonderful. Many others were called on and made short responses with witty remarks. Music enlivened the occasion during the banquet and also while assembling at Huntington Seed Co.'s store, the store being decorated and provided with seats for all.

John Hartje when called on, had not

PARTIAL VIEW OF THE INDIANAPOLIS SHOW.

much to say but mentioned that he was experimenting with a new carnation seedling which he intended to call "Rust."

About twenty ladies, mostly florists owning their own places, were in attendance. About thirty florists and others took part in the banquet, being visitors from other states. Mr. E. G. Hill and wife came direct to the banquet from the train, having arrived from Philadelphia.

An entertainment was given by the Indianapolis Florist Club and Society of Indiana Florists Thursday evening. At 9 p. m. about 60 members and invited guests gathered in the hall and marched to the club rooms, only two squares away. Everything was in readiness for a good lunch, with coffee and other refreshments. Mr. Langstaff acted as toastmaster or general director. A splendid array of talent was present. Prof. Walker introduced Mr. Healy for some songs; his baritone voice thrilled all present and he was called on again. Mr. Carmody gave an imitation of song which was sidesplitting. The Bald Headed Glee Club which added so much enjoyment to the carnation meeting banquet was also present and gave some songs which kept us all in good humor, and we could have listened to them all night. Prof. Walker introduced Mr. Pink Hall, a local artist in imitation songs and recitations. Never had so much fun in our club rooms before. Mr. Giesy of the Lockland Lumber Co. gave a beautiful recitation, "The Army of the Dead," and several others. It was nearly one o'clock when the entertainment broke up, every one leaving for home and their hotels still smiling.

Exhibition Echoes From Philadelphia.

The new chrysanthemum "Philadelphia" held supremacy to the last. It has proven itself to be an excellent keeper. In addition to other honors which have been showered upon it, a silver medal has been awarded, in further recognition of its superior merit.

I hardly feel justified in referring to Mr. Spaulding's grand new variety which was the only dangerous rival the Philadelphia had in competition for the "Blanc Prize." I even forget the number under which it

was exhibited. Numbers are necessary to designate different varieties to the owner or raiser of seedlings, but a number has no significance to the floricultural world at large. In size it is larger than the Philadelphia, but of a different form; White in color, and well built up in the center. This same variety was exhibited as a pot plant for a seedling prize, but it was found on examination to have six or eight plants potted together in one pot. Not that there should be any serious objection to this plan of exhibiting under certain conditions, but when the schedule plainly states that "plants must be grown to single stems," we should all try to adhere to that regulation. In some instances six or eight plants were in one pot, apparently with the idea of shutting up the eyes of the judges. Judges should not be expected to detect these evidences of attempts at fraud. A committee should have such matters in charge, to disqualify any exhibits that are not according to the schedule, and after that matter is thoroughly straight let the judges go ahead.

Rule eight among the regulations governing chrysanthemum exhibitions of the Pennsylvania Horticultural Society, is to the effect that "No person will be allowed to remain in the exhibition building during the time the judges and their assistants are at work." An excellent rule, and one that in justice to the judges the society should see enforced. Interested exhibitors are very much inclined to be in the neighborhood of their own exhibits, and especially when the judges are making the necessary examination before the awards are made, and some are so zealous in the interest of their own exhibits that they cannot refrain from interjecting a remark occasionally.

Some confusion has been brought about through the over-anxiety of an interested exhibitor in the matter of the award for seedling carnations. "Lena Saling" and "Della Fox" were the principal contestants in this class. The judges who had been appointed to examine these exhibits were very careful in making the award, taking the flowers into different lights, gas-light and day-light; and the first prize was awarded to "Lena Saling." The first prize card, however, appeared on the

*Spaulding's Seedling.**Philadelphia.*

NEW CHRYSANTHEMUMS AT THE PHILADELPHIA SHOW.

"Della Fox," and in explanation, the exhibitor stated that the young lady in the office gave him the card. The "young lady in the office" is an assistant to Secretary Farson, and had no authority to give or withhold premium cards. This is a case for the Pennsylvania Horticultural Society to settle at its next meeting. If exhibitors would only abide by the decision of the judges, and to await the affixing of the cards of honor by the proper authorities, these confusions could be avoided, and some apparent inconsistencies explained.

An idea carried out in Cincinnati and some other cities is for one of the judges to carry different colored ribbons on his arm, and when a first premium is awarded a blue ribbon is attached to the exhibit receiving that recognition; a red ribbon for second; yellow for third; and a white ribbon for a special premium or highly commended; and in this way if done at the time the judges are present few or no mistakes can or will be made.

The Academy of Music is not a first-class place to hold a flower show. A lady who dearly loves flowers said, after she had visited the show, that she does like to see flowers by daylight. This, let us say, was next to impossible in this building. It was no unusual thing to see the judges in the open air on Broad street assiduously examining flowers in the day light, so as to do all in their power to render a just decision, when the contest was in any way close; this was the case especially when seedlings were the principal contestants.

The plant exhibit on the lines of former years was far below the standard set by Philadelphia some years ago.

The exhibition of cut blooms is comparatively within the reach of any one, especially does this apply when the classes are so arranged that a grower of chrysanthemums in moderate quantities can exhibit. Too often the classes are arranged for the large growers, and for them apparently exclusively. A vase with twelve, twenty-five or fifty well grown blooms therein will attract more attention than the best grown plant that was ever exhibited. Judging from the way plants were exhibited in Philadelphia, with the large ungainly stakes to which the stems were "trained" (?) we are inclined to believe in a very few years they will be relegated to the rear. Why not offer a premium for the best twelve yellows—one variety, grown to a single stem, one flower on a stem, not more than two feet high, in not over a 5-inch pot; and this premium could be followed through all the different colors—very pretty little groups of these would be made. It seems advisable to limit the height, or some ungainly, lanky plants would possibly find a place in the show, which to me seems desirable to discourage. Liberal premiums should in all cases be awarded to meritorious seedlings, and we should not always insist on advances on good old kinds, because, good old kinds will oftentimes deteriorate, and if we can get new ones to take the place of the good old kinds, we should be willing to recognize that fact, and award accordingly.

There are many just such little matters worth thinking about at this time, when chrysanthemums are uppermost in our minds. Now is a good time to revise the schedule for next year, and at least one good man on a committee for that pur-

pose would be one who has acted as a judge during the passing season, as he is one of the most likely persons to notice discrepancies in lists of premiums.

E. L.

Newport, R. I.

The Newport Horticultural Society's fifth annual chrysanthemum exhibition was held under rather inauspicious circumstances as to weather and attendance and the gardeners who had worked so hard to make it a success expressed much disappointment at the apparent lack of popular appreciation. Most of the contributors are private gardeners in charge of the many beautiful estates which abound in Newport.

The show was not a large one but was all right as to quality of both plants and cut blooms. Thos. Beattie who won two first and two second premiums on plants showed among his plants good specimens of Domination, Hicks Arnold, Mrs. H. F. Spaulding, Ada Spaulding and A. G. Ramsay, the latter taking second prize for single specimen. Alex MacLellan's plants were well furnished with good blooms and lacked only in foliage, Robert Bottomly and Yeddo being among the best. James Hooper's specimens would have been improved by the use of smaller stakes. His plants grown to single stem and bloom were good, particularly Domination, Golden Wedding and Mrs. F. L. Ames.

The surprise of the occasion was the plant entered as single specimen by George Douglas, an amateur. The variety was Princess of Chrysanthemums, and the plant which was fully six feet across and

bore two hundred and fifty good blooms had never been under glass. Three beautiful groups of palms, ferns and decorative plants arranged with chrysanthemums were shown by Richard Gardner, Andrew Meikle and Gibson Bros., who took first, second and third prizes respectively, although the groups were so much alike that a choice was not easy. Andrew Meikle's group of crotons and other variegated stove plants filled one corner of the hall very prettily.

In cut flowers all the above mentioned exhibitors made creditable displays, an additional competitor in this section being W. N. Craig of Taunton, who caught most of the first premiums with some fine blooms. All the good and popular varieties were well represented. The entries for the prizes offered for centerpieces were all alike in design, being simple mounds of chrysanthemums arranged with ferns or asparagus. Gibson Bros. were first, A. Meikle second and A. MacLellan third in this class.

Silver medals were awarded to J. Cowles for canna Mrs. Fairman Rogers, Hugh Graham for chrysanthemum Philadelphia, and H. E. Chitty for carnations Alaska and Corsair. Pitcher & Manda showed a collection of novelties in cut blooms. H. J. Haas and Otto Ehrhardt exhibited good collections of vegetables and a special premium was awarded to Geo. A. Weaver Co. for bulbs and jardinières.

The school children's exhibition in competition for the special prizes offered by Geo. A. Weaver was very interesting and many of the plants showed intelligent and painstaking effort.

Germantown, Pa.

The twelfth annual chrysanthemum show of the Germantown Horticultural Society opened on Tuesday evening November 6, in the Cricket Club House at Manheim. It is the second show the society has held in this pretty hall and its natural advantages render elaborate decoration unnecessary. Some fine arecas for a background on the stage and a few more scattered through the gallery, together with a group of araucarias, a mantel or two of crotons and ferns and a group of foliage plants in the center of the hall surmounted by a fine specimen *Latania borbonica* were all that was needed to set off the glowing colors of the chrysanthemums. Mr. Albert Woltemate had charge of the decoration and in fact of the whole arrangement of the plants and flowers, and he made an excellent effect. The society owes much of its success to Mr. Woltemate's zeal and energy. Without his aid the shows would hardly be practicable.

The plants were as a rule well grown, compact specimens and made a very creditable display. There was no marked advance in quality over the plants of last year, but perhaps this can hardly be expected, as the amount of care and skill required to grow specimen 10-inch plants makes them too costly for any but a few growers. To my mind there is more beauty in small compact plants grown in from 6 to 8-inch pots with from six to twelve perfect blooms than in very large plants in 10 to 14-inch pots. There is certainly great room for improvement in this class and a little judicious change in the premium list for another season might make this class a most attractive feature, the great advantage being that plants of this size are just what is wanted for house decorations.

The cut blooms showed a decided im-

provement from last season and quite unexpectedly a private gardener carried off the honors of the day. Mr. Edward Jones, gardener to Mr. Cardeza exhibited some blooms that were first-class in every respect. For yellow, he had Mrs. Craige Lippincott in grand form. Niveus was his white and for pink he showed Harry Balsley and Erminilda. The latter is a beautiful flower and should prove a valuable bloom for commercial purposes, its clear pink color lightening up wonderfully well at night. The other flowers were all good. Mr. Albert Woltemate showing some Black Diamond and Geo. W. Childs that made an effective vase together.

The cut roses were fair considering the mild weather, Testouts and La France were both excellent but the others were a little small. Some cold weather would make them better.

The carnations were all good. Portia, McGowan, Daybreak, and Grace Wilder, Crimson Coronet, Buttercup, Sweetbrier and Helen Keller were seen to advantage and the competition was very brisk. A few orchids were shown and some nice rubbers and ferns.

The seedlings were very interesting and some showed promise of developing into valuable acquisitions. Among the novelties here Mr. Sibson gardener to Mr. Thomas McKean showed H. L. Sunderbruch which created a favorable impression. The gardeners and florists of Germantown can look back with pride to the chrysanthemum show of 1894, which let us hope will prove as great a success financially as it deserves.

The judges were Messrs. Bevis, Colflesh and Jellett; appended is the premium list:

THE AWARDS.

In pot grown chrysanthemum plants first premiums were awarded to Matthew Brackeu for 6 plants in 12-inch pots, 6 plants in 6 varieties in 10 inch pots, 3 plants in 3 varieties in 12-inch pots, specimen plant white, same yellow, same pink 3 standards in 3 varieties, and 3 plants in 3 varieties in 14-inch pots; to P. Conlin for specimen red; to H. Surman for 6 seedlings, and single seedling; to M. Sammon for specimen standard; to H. Diehl for 12 plants in 6 varieties in 8 inch pots, 6 plants in 6 varieties in 8-inch pots; to John F. Sibson for 12 plants in 6 varieties in 6-inch pots with one to three blooms each, and 6 plants ditto.

In cut chrysanthemums Edward Jones won firsts for 12 pink, 12 yellow, and 12 white; Albert Woltemate for 12 red; J. W. Young for 12 any color, 25 any one sort, and 50 ditto; David Cliffe for design of chrysanthemums.

In cut carnations Albert Woltemate was first for 25 scarlet, and 25 white; Thos. Meehan & Sons for 25 light pink; John F. Sibson for 25 dark pink; J. W. Young for 25 crimson and 25 any other color.

In roses Albert Woltemate was first on Perle, Testout, American Beauty and any sort; David Cliffe on Sunset and any other variety; J. W. Young on Watteville, Mermet, La France and Bridesmaid.

Special mention was made of a collection of orchids, palms, etc., exhibited by Albert Woltemate; of corner decorations shown by David Cliffe, and mantel decorations shown by Albert Woltemate and J. W. Young.

JOHN WELSH YOUNG.

Chicago.

On the seventh day (Friday) the competition in orchids and chrysanthemum baskets and set of bouquets, (one bride's and four bridesmaid) took place. In orchid baskets only three entries showed up, a number of entries being scratched owing to the scarcity of stock. P. J. Hauswirth took first, \$50, on a small round handle basket; the arrangement consisted of a fine plant of *Adiantum gracilis* plunged into the center of the basket, between the graceful fronds of which 50 *Cypripedium Lawrenceanum* were arranged, giving an airy and pleasing effect, sprays of *Oncidium Cavendishii* on one side of the handle completed this simple arrangement. W. J. Smyth took second, \$40,

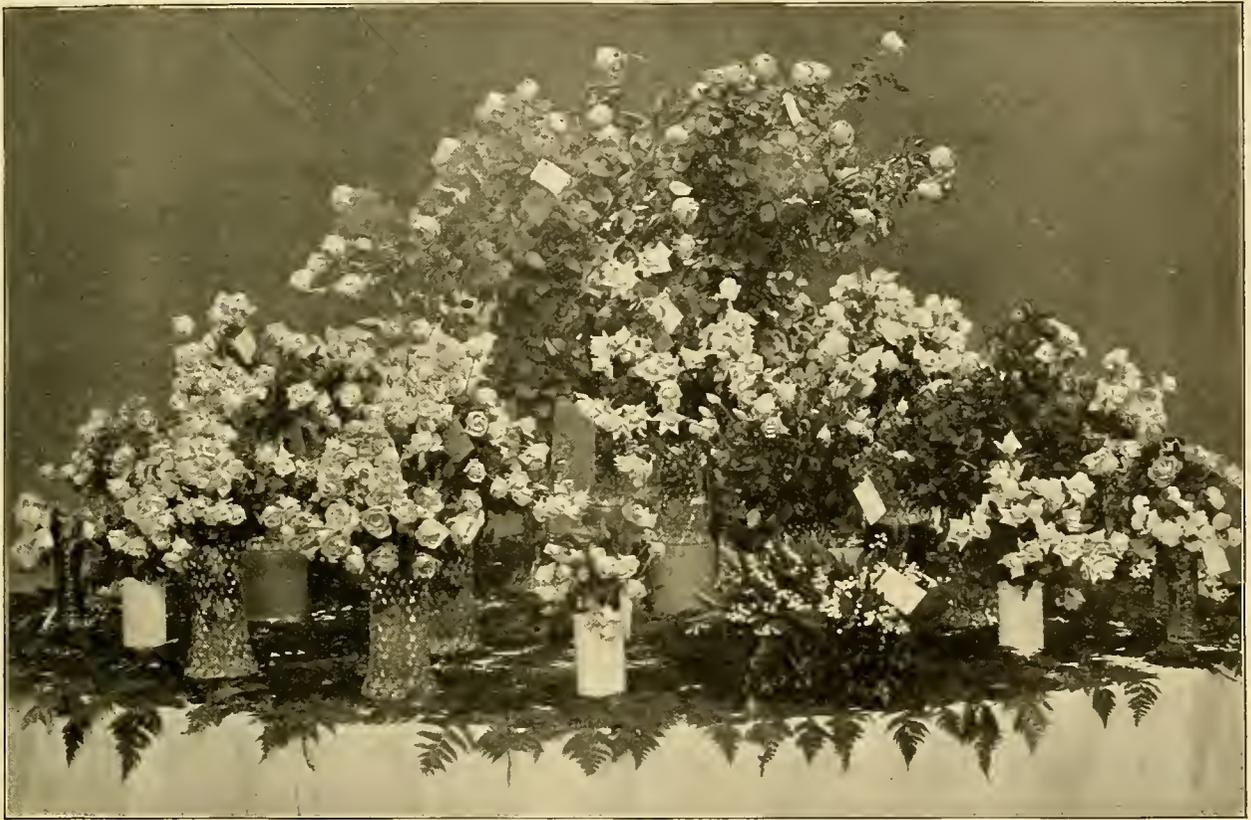

with a high handled oval basket. The handle of this was also trimmed with *Asparagus plumosus* and *Oncidium Cavendishii*; the basket contained a variety of such forms as cattleyas, odontoglossums, cypripediums, etc. The third prize, \$30, went to Anthony & Curran for a tall high handled basket showing one side, the upper half being filled with *Cypripedium insigne* and the lower half with *Cattleya labiata*. *Adiantum Farleyense* was set between the flowers, giving the arrangement a rather heavy effect.

In chrysanthemum baskets there were five entries, Anthony & Curran taking first, \$25, on 50 blooms of Mrs. Jerome Jones arranged in a three foot long common splint market basket, the outside of the basket being covered with autumn leaves. No additional green was used. J. M. Gasser of Cleveland took second, \$15, with a beautiful arrangement of about three dozen blooms consisting of The Queen, Ivory, and Ada Spaulding. The basket was a low round celluloid affair with gilt handle tied with pink ribbon. *Adiantum cuneatum* was added judiciously with fine effect. Third prize, \$10, was taken by W. J. Smyth with a plain high handle basket filled with about 50 Eugene Dailedouze; asparagus was set between the flowers.

In the competition for bouquets three entries showed up. The arrangement showed no startling innovation on the usual styles made for the purpose intended. Lee Walz took first, \$35, with four bridesmaid bouquets of pink carnations with plenty of buds on the stems and their natural foliage for green, these were arranged loosely and tied with ribbons to match. The bridal bunch consisted of Bride roses tied with white ribbon. Second, \$25, went to J. M. Gasser for set of bridesmaids bouquets made of Bridesmaid roses with lily of the valley studded between, ribbons to match. Bridal bouquet of Bride roses tied with white ribbon. W. J. Smyth took third, \$15. Bridal bunch of Kaiserin roses tied with ribbon, four bridesmaids bouquets of Bridesmaid roses with ribbons to match. None of the bouquets in all three entries were large, varying from three to four dozen roses each, and four to five dozen carnations.

On Saturday the competition in rose baskets brought out seven entries, two of these were barred out, being sent in too late. One of these by J. M. Gasser of Cleveland was a beautiful thing, a round basket with high handle. Brides and Bridesmaid roses with *Adiantum* were employed with rare taste. The other was entered by the Gallagher Floral Co.; this was a typical French style affair, a medium sized round basket with extreme high handle, the latter was trimmed with a spray of Meteor, Bridesmaid and Perle roses tied with pink ribbon, the body of basket consisting of Bride roses arranged with their own buds and foliage only with artistic effect.

First prize, \$25, was awarded to P. J. Hauswirth on a round handle basket filled with about 100 Meteors with their own foliage only, the arrangement was loose showing each flower without crowding. Second went to J. M. Gasser for low handle basket, one side of Brides the other of Bridesmaid without additional green. Third was taken by W. J. Smyth with a large showy basket of 100 Testouts arranged with *Adiantum*, the handle being tied with pink ribbon. C. A. Samuelson showed a large basket arranged for front view, the material employed being about 200 Testout and Bridesmaid with *Adiantum*, handle with pink ribbon. The

BASSETT & WASHBURN'S TABLE OF ROSES AT THE CHICAGO SHOW.

arrangement was too massive to be pleasing. Thos. Rogers showed a long square without handle, one-half Meteor, the other Perles with rose foliage only. This arrangement also was rather heavy besides the Perles being of poor quality.

PAID ADMISSIONS.

Total.....9,740

Under the contract with those controlling the exhibition hall the exhibits were to be all removed from the building by noon Monday, and such a day to move plants! A blustery, biting cold wind blew the fine snow into every crevice and made it practically impossible to move plants with safety. It is to be feared that many valuable plants were seriously damaged.

San Francisco.

The tenth semi-annual show of the California State Floral Society was held November 1-3. The hall was tastefully arranged, and the show was conceded to be the finest given by the society so far.

The Sunset Seed & Plant Co. made a fine exhibit, not for competition. John H. Sievers was awarded prize for best general collection, Mrs. M. P. McLelland for collection of cut flowers, John A. Carbone for collection of roses, and Grallert & Co. for collections of dahlias and carnations. For largest and best collection of plants no first was awarded, but the

second went to K. Sato & Co.; for foliage and decorating plants to Charles Abrahams.

Cut blooms we think as good if not better than before, pot plants not up to former shows. Mr. John Carbone of West Berkeley showed a fine vase of The World, and among his blooms some fine Pres. Smith, Geo. R. Gause and E. Dailedouze.

McLellan Bros., San Francisco, had some grand blooms of H. E. Widener, C. Kruger, Mrs. J. Geo. Iis, Ed. Molyneux and Mermaid. Mr. W. S. Davis, Ross, Cal., showed some grand blooms of Kansas, Waban, Amazon and Queen; among his exhibit he also had some fine pot plants grown to 6 and 12 blooms, The Queen, King of Chrysanthemums, Golden Gate, John Goode and H. E. Widener being the best. Sunset Seed & Plant Co., Menlo Park, had a large exhibit of pot plants in 5 and 6-inch pots grouped around some tall palms. J. H. Sievers of San Francisco made by far the most extensive exhibit of cut blooms, showing 150 varieties in 250 blooms, staged singly among ferns and Areca lutescens, with four grand vases of 50 blooms each of Mrs. Craige Lippincott, H. E. Widener, Mrs. Jerome Jones and Queen.

No premiums were offered by the society for seedlings, but two among H. Yoshiike's (of Oakland, Cal.) were found worthy of certificate of merit, one named W. S. Davis, best described as a full bloom of Edw. Fitler, the other a light pink of immense depth. Among others Messrs. Domoto Bros., Fruitvale, Cal., also had two seedlings certificated, a deep pink with broad petals, center incurving, named Mrs. Hunter, and a deep pink in shape like Joseph H. White, and forming

a perfect round pink globe. Mr. John H. Sievers received certificate of merit for seedling Sievers Jr., very broad petals, creamy white ground, shaded pink and yellow, flower of great depth and substance, also for seedling Pearl Fenton, a novel bloom of great substance and forming a perfect white ball formed of an immense number of straight, but spiral petals.

In the competition for the finest and most admired bloom, the public voting on it, prize was awarded to J. H. Sievers for Eugene Dailedouze, second going to The World, exhibited by John Carbone, and third to Thos. McIntyre for Waban.

The show was very liberally patronized by the public, and received a great deal of enthusiastic newspaper notice.

C. K.

New Haven, Conn.

The annual chrysanthemum show opened here November 7, and was without exception the finest show ever given in New Haven, and we doubt if the quality has ever been exceeded by the larger cities. It was held in a large armory, and thanks to the very large exhibits presented a magnificent spectacle.

Among the plant awards A. N. Pierson, Cromwell, Conn., received first for 6 specimen plants, 4 plants, one specimen, white, one specimen, pink, one specimen, yellow, specimen, any other color, 12 plants in 6-inch pots, 10 plants, white. J. H. Slocombe received first for four pompons, 10 single stem plants, yellow; Wm. Rowe first for seedling plant.

In the cut blooms A. N. Pierson received first for 20 varieties, 20 yellow, 12 white, 12 pink, vase of 20. For group of palms arranged for effect, first, Champion & Co.

Among the numerous exhibitors who sent plants for the benefit of the show were H. A. Allen, C. P. Lines & Co., Mr. Kohein, Robert Paton, Mrs. Gardner, Champion & Co., Robert Veitch & Son, Archibald Veitch, Wm. J. Rowe and Pitcher & Manda. To note the finest varieties we should put down Ivory as being the finest white shown in a plant, though Mr. Pierson showed a specimen of Domination that was actual perfection. In yellow some cut blooms of Eugene Dailedouze stand out from all others in richness of coloring, broadness of petals and general substance and build. Maud Dean seemed to lead in the pink varieties, but with all others of that color it seems to lack that pure pink shade that is so desirable. Mrs. Whilldin and Pres. W. R. Smith were shown in grand shape, every requisite being perfect, but the decided clear color so much sought after was not there. Geo. W. Childs was the best dark sort; some plants were beautiful rich crimson velvet and others probably from too much heat were dull and without character. Mrs. Hicks Arnold also makes a wonderful specimen, but the queer combination of bronze, yellow, tan and snuff color though effective is far from pleasing. V.

Hamilton, Ont.

The show here was finely arranged, and was generally regarded as an improvement, though the miserably inclement weather which prevailed all over the country last week could not fail to affect the number of visitors, still the attendance was good and the concerts by the famous XIII Battalion Band added greatly to the enjoyment of those who were present. Exhibits from the Industrial School, Mimico; Nathan Smith & Sons, Adrian, Mich., and Pitcher & Manda, Short Hills, N. J., were highly spoken of.

In the groups the exhibits of Mr. Aylett, gardener to Senator Sanford, and Mr. E. G. Brown were very fine and specially spoken of by the judges.

For 50 chrysanthemums cut bloom, distinct, for the cup, Mr. J. H. Dunlop of Toronto and Mr. E. G. Brown, Hamilton, made very fine exhibits, the blooms being perfect in size and form, and the judgment was only arrived at after long discussion and by points. In fact all through this class the exhibits could not be beaten anywhere. Mr. Dunlop received first, Mr. Brown second.

In roses, 50, not less than five varieties, for a cup, the exhibits of Mr. H. Dale, Brampton, and Mr. J. H. Dunlop, Toronto, were splendid, and the judges had the greatest difficulty in coming to a decision. The exhibits comprised very fine Mermets, Meteors, Brides, Cousins, Hoste, Sunset and Perles, Mr. Dale being first, Mr. Dunlop second.

A seedling carnation, pure white, shown by Messrs. Spears & Muston, Deer Park, was highly spoken of by the judges.

For chrysanthemum plants E. G. Brown was first for specimen pink, specimen yellow and collection of 12 varieties. S. Aylett was first for collection of 24, and for 24 single stem plants.

For chrysanthemum flowers, W. Scott, Buffalo, received first for vase of 25 blooms, first for 12 distinct varieties, first for 12 blooms, any color, first for 6 blooms, yellow, first for 6 blooms, any other color. A. Gilchrist, Toronto Junction, received first for 25 distinct varieties. E. G. Brown received first for 12 blooms, white, 12 blooms, pink, vase of

25 blooms. J. H. Dunlop first for vase of 50 blooms.

In plant awards S. Aylett received first for group of chrysanthemums arranged for effect with ferns and lycopods, group of foliage plants arranged for effect, specimen palm, group of 6 palms, 12 specimen ferns. F. G. Foster received first for 6 specimen ferns and 12 specimen primulas.

In the floral designs S. Tidy & Son, Toronto, received first for flat cross of white chrysanthemums, first for wreath, and first for flat table basket. E. G. Brown received first for presentation basket.

In the carnation classes J. H. Dunlop received first for 25 blooms, white, 25 blooms, fancy; H. Dale first for 25 blooms, red, 50 blooms, one variety; Spears & Muston first for 25 pink; J. Gammage & Sons, first for 50 blooms, with foliage.

H. Dale, Brampton, received first prize for Perle des Jardins, Mermets, Bride, Wootton, Sunset and any other variety, and for vase of 50; Spears & Muston first for Mme. Hoste. F.

Louisville, Ky.

While the plants at our show were good, still another week would have improved the blooms. In cut blooms we certainly can be proud; each florist simply outdid himself, as we down here have never yet seen such fine specimens. Roses were exhibited by Nanz & Neuner, J. Schulz, Chas. Schleeter, F. W. Wrampelmeier and Wm. Walker. Such a display, especially here, was never before seen—Beauties, Albanys, La France, White La France, Hostes, Bennetts, Niphetos, Brides, Gontiers, Meteors, Belles, American Perfection (introduced by Nanz & Neuner), Perles, Kaiserin, Bridesmaids. Also, as a special feature, although not for competition, Nanz & Neuner made a most elaborate display of roses in general, which took the house, as it is not often that so many hybrids, teas, Bourbon and other sorts are seen this late in season. In point of beauty and general make up our fifth chrysanthemum and flower show stands on record as being a decided success. In attendance there was much to be wished for, owing no doubt to the election and other attractions, but Thursday and Friday were very good and all that was desired.

The judges were F. W. Hibberd and A. Stein. In the plant classes Jacob Schultz received first for 35 plants, first for 5 market plants, yellow. Nanz & Neuner first for 10 standards, first for 25 single stem, first for 15 market plants, first for specimen plant, any color. F. W. Haupt first for 5 market plants, white. F. W. Wrampelmeier first for 5 market plants, any other color.

In cut blooms Jacob Schultz was first for 25 blooms, white; Nanz & Neuner first for 25 blooms, yellow, and 25 blooms, any other color.

Among designs F. C. Haupt received first for funeral design, and Nanz & Neuner first for table centerpiece.

Incidental to the chrysanthemum show the first annual banquet of the Kentucky Society of Florists was held November 8. The decorations were superb. Each corner was banked high with ferns. The tables were laid in the form of a T, the centers were banked with chrysanthemums and roses, at the edges of the tables was a continual garland of smilax, and between every chair a large chrysanthemum was tied with a pink ribbon.

At the opening of the banquet President Jacob Schultz welcomed the members and the invited guests. To those

not members of the society he explained the object of the Kentucky Society of Florists. A toast was proposed to the welfare of the society. E. G. Reimers delivered an interesting address on the objects of the society from the standpoint of the florists. By securing the co-operation of all the florists the advancement of the society is assured. Henry Nanz of Nanz & Neuner spoke on the benefits derived from flower shows. Mr. Nanz believed in having more frequent exhibitions, which, though perhaps at first conducted at a loss, will result in great benefits to the trade and in the encouragement of the displays of amateur florists, of whom there are many in and about Louisville.

E. Power of Frankfort, a visiting florist, paid a high tribute to the chrysanthemum show. Charles Nenner spoke on landscape gardening. Short and interesting talks were also made by John J. Barrett, A. Stickler and others. Mr. J. E. Marrett was toastmaster.

Union, Hill, N. J.

The North Hudson Florists' Club held a very successful show at Union Hill, the first exhibition of the kind ever held in Hudson County. The judges were Mr. Dressel of Bonn & Dressel, J. M. Keller and Rudolph Asmus.

The stage was decorated with group of palms, shown by Max Mosenthin, for which he was awarded a silver cup. In the center was a floral bicycle by Oscar Boehler. A dinner table by John Rickert received first prize.

The chrysanthemum plants were very fine, and among the awards H. Sternhoff received first for 6 bush plants, one kind, 6 two of a kind, 10 single stem plants, 5 single stem plants, and group of miscellaneous plants in bloom. W. Hellebrecht took first for 6 plants, 3 of a kind, E. Bangert took first for best bush, pink, best bush, yellow, best any other color, three standards, specimen standard. C. Dietz received a cup for group of not less than 25 plants. A. Dinker took second for 12 carnations in pots.

In the cut flower section John Rickert was first for collection in vases, vase with other foliage, and for lycopodium. H. Baumann was first for 12 white chrysanthemums, 12 yellow, 6 yellow, M. Hanson first for 12 pink and special for largest chrysanthemum bloom. P. Fisher was first for 6 white, A. Mennie for 6 pink, and Con. Dietz for 6 any color.

In carnations John Birnie received all the first prizes. The awards for roses went to Max Mosenthin, P. Fisher, and C. Zarembo. Hansen was first for violets, Sternhoff for Liliun Harrisii and valley. P. Daly was first with 12 ficus, Lehnig & Winnifield with adiantum, and P. Daly with cyclamens, and Ritman with pansies. The show was much admired, and received much complimentary newspaper notice. It was wound up with a ball in the evening, which was heartily enjoyed by the club members and their guests. J. B.

PADUCAH, KY.—C. L. Brunson & Co. gave an exhibition of chrysanthemums and other flowers November 6 to 8. On one evening a feature was a table decoration of chrysanthemums, followed by a table decoration of roses the next evening. No admission was charged.

STOUCS CITY, IA.—J. C. Rennison gave his annual chrysanthemum show November 6 to 9 in the Peirce block. The admission price was 25 cents, children 15 cents.

MR. E. G. UHLEIN'S DISPLAY OF ORCHIDS AT CHICAGO.

America's Greeting to England's Greatest Rosarian.

The reception and dinner given in honor of the Very Rev. S. Reynolds Hole, Dean of Rochester, England, at New York, on the evening of November 14th, was a most notable occasion. The dining hall in the beautiful Savoy Hotel never looked handsomer, never held a more representative company or a more worthy guest than the eminent man in whose honor they met. The tables were lavishly decorated with pink chrysanthemums, roses and carnations, the central feature being large vases of America's two most recent contributions to the list of florists' roses, the Mrs. W. C. Whitney and the Mrs. Pierpont Morgan.

Mr. W. C. Barry of Rochester, N. Y., presided. In introducing the guest of the evening he said: "We have assembled here to do honor to England's greatest rosarian, and I feel fully justified in asserting that no horticulturist could come to these shores who would receive a more hearty welcome than Reynolds Hole." He assured the gentleman in the strongest terms of the sentiments of esteem felt towards him by every horticulturist in America, that America fully appreciated his work for floriculture and recognized that he had done more than any other man to secure for the rose that position to which the queen of flowers is justly entitled. He referred to the popular enthusiasm over the rose in England, which he believed could be duplicated here had we only a Reynolds Hole, a sentiment which was enthusiastically applauded.

Dean Hole responded: "Gentlemen, I do not believe there is any art or vocation more calculated to make men gentlemen; my brothers rather, I would say, which is far sweeter, for there is no sentiment in the wide world more calculated to encourage true fraternity than the love of flowers. There are red letter days in all our lives. There are occasions which linger in our memory, hours of joy, events that all of us remember, triumphant hours. Our first new jacket, the first watch, the first ride on a pony, when we first fell in love, and it is impossible to be among all this beauty without thinking about love among the roses. I am almost

inspired to remember when I fell most desperately in love when about thirteen years of age, and I wrote my first poetry." The recitation by the speaker of the pretty verses beginning with "When first I saw the golden curls of William Barlow's youngest sister," was followed by tumultuous applause.

Continuing he said: "These happy memories are all closely associated with flowers. In those happy days of childhood who didn't love the flowers, the wild roses, the daisy chains, the wreaths of wild roses, and who doesn't remember his first plant?" He then told of his own first acquisition, a salvia which he bought for sixpence, his acquaintance with Thomas Rivers, Charles Turner and other celebrated horticulturists, his first rose show which was such a success, and the two cups which he won, which made him so happy that an old gardener had said that it seemed as though he would go straight up to heaven, but he wasn't ready. He expressed thankfulness that he had lived to help to promote in some little measure the love of flowers. His principal happiness he found in the sympathy and love of fellow men such as he saw here gathered round him, for where is found true love of the flowers is found the true love of the florist. He expressed further his appreciation of the welcome extended to him, referring in most complimentary terms to Mr. John N. May, who had been the first to meet him on his arrival. Speaking of the parks of New York he said that there was nothing in either Paris or London to compare with the magnificent drive along the Hudson river, and applauded Mr. Parsons for his success in keeping his charge so marvellously true to the principles of nature in the face of so many obstacles. Concluding he extended to all an invitation to visit England, assuring them of a welcome at the Deanery and promising the blessing of the Dean.

Mr. Robert Craig, of Philadelphia, was next called upon. He said he desired to express the thought that was uppermost in the minds of all, gratitude for the opportunity to be here to-night to meet the genial kindly man whom all had learned to revere. He referred to Dean Hole's book on roses as a text book indispens-

able to rose growers and predicted a glorious future for rose growing in America.

Mr. Charles A. Dana was next introduced as a man whose love for horticulture is manifested in a practical manner at his home; the home of the leading editor, also the leading horticulturist in America. Mr. Dana modestly disclaimed the credit. The honor, he said, belonged to Mr. Falconer, and he took great pleasure in thus publicly making this acknowledgement. Dean Hole, he said, was a public benefactor over the whole broad globe wherever the English language is heard. Wherever he goes in this country he will find friends ready to welcome him and find himself beloved by them although they may not before have had the opportunity to see his face.

Dr. Thompson, being called upon to respond to the toast "the public parks of New York," responded briefly, paying his respects to the honored guest and congratulating the city of New York upon her recent political redemption. Mr. W. A. Manda was next called up to speak for the floriculture of the future, which he did in a most eloquent manner, and referred to the advancement of the past ten years as an index of what may be expected for the coming ten, predicting a marvelous development in the near future and concluded with the sentiment that "when the clergy, instead of instructing their congregations as to the difference in creeds, shall take them out of doors and show them the temple of the Almighty, when preachers follow the example of the much beloved gentleman present to-night, then the people will have reached the happiest time possible in human existence and the title of gardener will be the proudest on earth."

At this juncture a new rose was introduced, a beautiful pearly pink sport from Testout, which developed at the establishment of Mr. John H. Taylor, and which Mr. Craig was now asked to invest with an appropriate name. This Mr. Craig did, naming it Dean Hole, and expressing great faith in its future career. The guest of the evening responded, expressing gratitude for the honor conferred, and said that in his fifty years of experience as a rosarian he had never known of

but one instance of real jealousy among florists, and proceeded to relate the story in an inimitable manner amid screams of laughter from his audience.

Mr. C. L. Allen then spoke of floral reminiscences of the past, Mr. J. N. Gerard of gardening as a recreation. Mr. W. A. Stiles and Dr. Hexamer added their tribute of welcome to the guest, and Mr. J. N. May said a few closing words saying that he had first met Dean Hole when but eight years of age and had worshiped him ever since.

At the request of Dean Hole the health of Mr. Barry, who had presided so acceptably, was then drunk, a similar courtesy being then extended to the guest of the evening, and with the singing of Auld Lang Syne the company dispersed.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

The general impression that this is the most trying season of the year for the carnation grower is well founded. We are too anxious to get the buds to open and during these cold cloudy days the temperature is allowed to run over 60°. This is a very great mistake, better keep the houses at 56° when the sun will not send it higher. The plants then grow strong and of a dark healthy green. Artificial heat may help a few of the buds nearest open to mature, but I believe it tends to retard the balance, at least it is sure to make weak stems for which we have no use. Many a house of carnations has been ruined by overheating. There is scarcely a reader of the *FLORIST* who does not fully understand this fact as well as I and I merely make this statement now because in going through the houses of growers who are considered A1 I have found the mercury on cloudy cold days as high as 75°, and when I asked the grower if he did not consider that degree rather high he was surprised to find it where it was; merely a lack of attention, as he had failed to notice the thermometer.

It is absolutely necessary to keep the plants growing steadily, never allowing a check from any cause. Can you do this and at the same time be playing football? That green mould should not be seen. Why? Simply because it shows that something is wrong and it will only take a few moments to remove it. You never see a healthy bench of plants with mould on it; this often happens when the soil is soaked on top and dry on the bottom. This same condition I find will often produce stem rot. I had a bitter experience in this respect several years ago. I was obliged to use a different soil from what I generally did and as I left the watering to an employee whom I supposed knew his business, coming to me as a thorough greenhouse man, I did not examine the work thoroughly. The plants began to droop and the mischief was done. What plants were left were watered after that and I had no more trouble.

Then rot does not always arise from lack of water but from too deep planting. This point has often been mentioned in these columns and is now generally understood. As I have made a great many tests in the deep planting of seeds outside one of them may throw some light on the cause of failure from deep planting. Four lots of corn were planted on the same day in one continuous row. One lot was barely covered; lot No. 2 was planted one-half inch deep, lot No. 3, one and one-half inch and lot No. 4, two and one-half inches. Results; lot No. 1 germinated in four days; lot No. 2 in six days; lot No. 3 in eight days and lot No. 4 in ten days. After a period of three weeks the last lot was yellow and very poor. Upon examination the stems below ground and just above the kernel were found to have decayed and new roots were starting just under the surface. This same test I have made with soft wooded plants such as coleus and the results have been almost identical with the corn mentioned. This new root growth I have never noticed to any great extent on stem rotted carnations and I do not think it will appear, as the plants are too far advanced in growth to allow of it. CHARLES H. ALLEN.

Charles Jackson Dawson.

Charles Jackson Dawson, the son of Jackson Thornton and Minnie McKenna Dawson, was born in Jamaica Plain, Mass., October 17, 1871. From earliest boyhood he exhibited great fondness for plants and plant growing, taking naturally to the craft and the art in which his father has made such a distinguished success. At the age of eight years he was employed during the time which could be spared from his schooling in such greenhouse work as was suited to his capacity, and ever since has been continued in the same employment in the same situation. After completing the course at the Roxbury high school he became a student at the Bussey Institution of Harvard University; at the same time he was given practically the control of the greenhouses connected with the school. This confidence reposed in a man so young was not misplaced, as has been repeatedly proved in the many exhibits which have been made by the Bussey Institution at the shows of the Mass. Hort. Society. Several of these exhibits have been illustrated from time to time in this journal; many of them have attracted attention from their originality, and by the true genius displayed in the growing and arrangement of many varieties of plants not commonly grown under glass.

At the Bussey Institution the forcing of many hardy plants during February, March and April is required, the material so obtained being used by the botanical classes at Cambridge. Mr. Dawson showed great proficiency in so handling these plants that the supply was ready at the day appointed, and in sufficient quantity to meet the wants of about two hundred pupils; no small task when it is known that from twenty to thirty thousand specimens are used every year. The main points in this line of work he has put in print in an article read before the Gardeners' and Florists' Club of Boston, which has also been printed in the *AMERICAN FLORIST*. From time to time Mr. D. has also contributed notes on trees and shrubs growing in the Arnold Arboretum to *Gardening*.

This course begun so young bids fair to make a good finish. Gardening as practiced to-day is perhaps lacking in good all round men. It is hoped that the ex-

ample set by the subject of this sketch will be followed by other beginners who wish to become adept in the art, and help in the advancement of the craft.

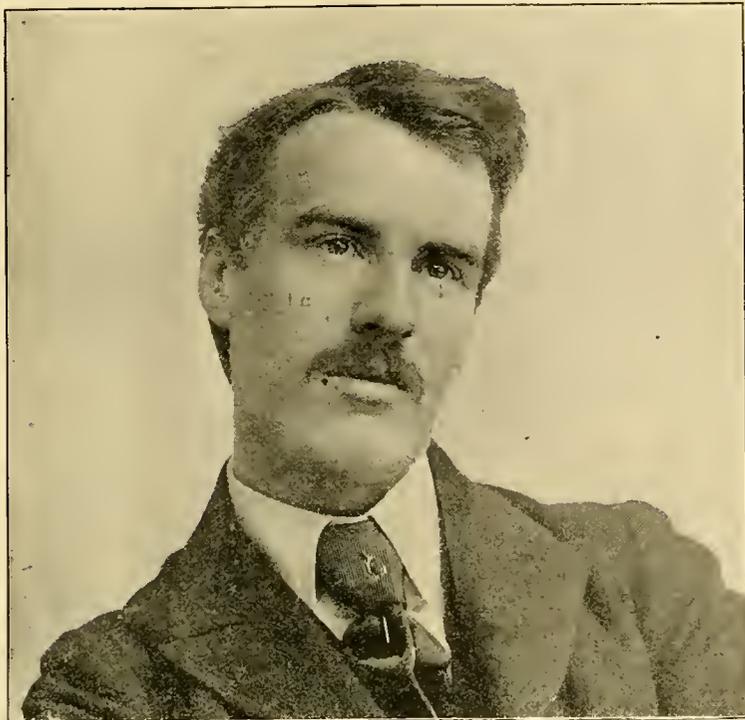

B. M. WATSON.

New York.

The November meeting of the Florist's Club excited especial interest from the fact that next year's officers were to be nominated, and a representative gathering was present. The balloting resulted in the nomination of the following gentlemen for the various offices: For President, Chas. H. Allen; vice-president, J. M. Keller, Rudolph Asmus; treasurer, C. B. Weathered, Julius Roehrs; secretary, John Young, W. F. Sheidan; Trustees, J. H. Taylor, S. C. Nash, Jas. Dean, Theo. Roehrs, A. T. De La Mare and J. N. May. It was announced that at the December meeting Mr. Sam'l Burns would deliver an essay upon improvements in greenhouse heating. Mr. John Morris set an animated discussion agoing by asking whether anyone could tell how to produce branching rubber plants such as are grown by W. K. Harris of Phila. Mr. Forsterman said that strong nourishment would do the work. Mr. Dean advised that plants be repotted in February or March, fed freely in plenty of heat and then plunged out in July when some four or five out of a dozen would be found to have branched. No trouble to get dwarf branching plants, he thought; the only trouble is to get the price for them. Mr. Henshaw advocated laying the plants on their sides to force breaks from the joints. Mr. Manda thought there was no secret about Mr. Harris' accomplishment. Grow enough of the rubbers and grow them long enough and a good proportion will come with branches. Mr. O'Mara summed up the case sagely and agreed with everybody. Mr. Joseph A. Dirwanger of Portland, Me., being present was called upon for a few remarks and responded with one of the neatest little speeches imaginable.

The floral exhibit on the occasion of the monthly meeting of the Farmers' Club at their rooms, 111 West 38th street on Tuesday and Wednesday, November 13th and 14th, was not large but exceedingly choice and interesting. Mr. J. N. May staged his two new roses, Mrs. W. C. Whitney and Mrs. Pierpont Morgan, the latter, a sport from Mme. Cusin, being awarded a certificate of merit. Mr. May also received certificates for seedling carnations as follows: Dean Hole, a fine yellow resembling Buttercup; Maud Dean, somewhat similar in color to Orange Blossom, and Lena Saling, a beautiful glowing cerise. Honorable mention was given to three promising seedling chrysanthemums from Mr. May. W. A. Manda received certificates for new coleus Malcom McRorie and C. B. Weathered and for *Adiantum capillus veneris imbricata*; also H. E. Chitty received a certificate for new white carnation Alaska, and Siebrecht & Wadley for rose Belle Siebrecht. Handsome carnations were shown by J. A. Suydam & Co. and Dailedouze Bros., chrysanthemums by Ernst Asmus, Alex. McKenzie, J. N. May, Geo. H. Hale and others. Interesting remarks upon the history and classification of chrysanthemums were made by Mr. W. A. Manda and on cultural points by Mr. J. N. May. Rev. S. Reynolds Hole visited the exhibition on Tuesday afternoon.

Siebrecht & Wadley's exhibition at the Eden Musee is a very attractive display prettily arranged. The reception hall

CHARLES JACKSON DAWSON

with its great centre group of splendid palms, crotons and other decorative foliated plants and chrysanthemum bordered corridors forms an appropriate entrance and gives the visitor that good first impression which counts for so much. The music hall beyond is the location of the main exhibit. The arrangement here is very pleasing and is done as well as the limited space will allow. The walls and balconies are profusely hung with wild smilax and the groups are so arranged as to make the most of the reflections in the big mirrors.

The centre piece is a noble plant of *Caryota sobolifera* not less than thirty feet in height surrounded by a group of chrysanthemums grown to single stem and bloom. These chrysanthemums were contributed by Peter McDonald of Summit and were awarded first premium in their class. Similar groups with towering tree ferns, *livistonas*, etc., in the centre occupy the floor, while the cut blooms and smaller plants form a brilliant border around the entire hall.

The most attractive spot for many is the front of the stage where are massed the orchids and choicer stove plants. Here are cacteyas, oncidiums, cyripediums and vandasia in profusion interspersed with delicate ferns and backed by palms, with a noble specimen of *Sphaerogyne latifolia* in the middle. Premiums for chrysanthemum plants and cut blooms were awarded to Claude Wilson, Mr. Webber, gardener to J. Hood Wright, Ernst Amus, John Beatty, W. Cowan, F. Welsh and others. Special premiums were given to Peter McDonald, for ten orchids in bloom, and a specimen plant of *Oncidium varicosum* var. *Rodgersii*; to F. Welsh for a well bloomed plant of *Vanda cœrulea*; to Siebrect & Wadley for a very fine form of *Vanda cœrulea* and for hybrid tea rose, *Belle Siebrect*, and to Geo. T. Schuneman of Blue Point for violets of superlative quality. Messrs. Siebrect & Wadley are to be congratulated,

not only for their enterprise in carrying out such an undertaking, but also on the good will shown towards them as evidenced by these contributions from their brother florists.

Dullness and uncertainty still prevails in the cut flower trade. The overstock of chrysanthemums has slackened up and the worst is over in this line. Roses are not so heavily overloaded as last week and consequently there are not so many to carry over. The horse show has created a temporary excitement in the violet market and doubled up the prices for the present, and American Beauty if first class also feels the impetus of this great social event. Cold and stormy weather has interfered with the operations of the street vendors, consequently those growers who send in stock of inferior quality which has to find its outlet through these people are not likely to swell their bank account to any considerable extent under prevailing conditions.

Thos. W. Weathered arrived from England on City of Chester greatly improved in health.

Philadelphia.

Business is fair with occasional spurts in spots. The last few days have been cool and bracing and stock generally is showing up better. Chrysanthemums are now at their height and at certain hours of the morning pedestrians on Chestnut street are in danger of being pushed into the gutters by the hustlers as they go tramping from one store to another with their great boxes of "mums." One of these gentry with a full load on takes up almost the entire sidewalk. When three or four happen in a store at one time and spread their boxes around there is scarcely room for customers and when ten can be counted in front of the counter (this we believe is the record) it is needless to say they run the store.

"Mums" are selling at all prices, 20

cents per bunch for common field grown sprays, \$2 per hundred for good small flowers in sprays, larger flowers at \$4, another size 75 per dozen and from that up by degrees to \$2 per dozen for very fine and \$2.50 for extra Dailedouze which latter variety is we believe given the place of honor. There is a fairly good demand for this flower in spite of the predictions as to its failure, those growers who will be able to bring in good flowers two to three weeks from now will find a ready market for them at fair prices.

Roses have improved in quality but the prices remain the same with the exception of Beauties, which now bring \$2.50 per dozen for good stock; Heacock, Burton and Lonsdale are carrying good Beauties. Testout is getting into form and \$5 is asked for the best. Other good teas bring \$3 and \$4, while for all the small varieties \$2 is still high. Double violets are scarce and 65 cents per hundred is asked. Single too are hard to get in quantity, and sell for \$3 per hundred bunches. Carnations have never been finer at this season nor have they ever sold so low considering their quality and the time of year; \$1 is still asked for the best, \$1.25 has been asked but just to see how the market would take it, as no quantity can be sold at this figure as yet. Swainsona is to be seen occasionally and sells well; this will become a staple flower. Mignonette is in and sells well, \$1.50 per hundred is the price. Smilax sells slowly at 12 to 15.

K.

Washington, D. C.

There is but slight improvement in trade over last week. Chrysanthemums are in full force, crowding the other flowers off the field to a great extent. The demand for the cut bloom is good especially for those selling from \$1 to \$3 per dozen; there is but little call for the higher priced single flowers. There is a demand for plants having from five to ten flowers in small pots, selling from 25 to 50 cents each, while those in large pots that bring from \$1 to \$3 go slow. Roses are coming in good, demand only fair. Violets more plentiful and much better in quality. Carnations a little better in quality and more plentiful. The trade for window plants has hardly opened, and will probably continue slow until the "mums" are gone.

While the club has had no exhibition this fall each of the store florists has had a private exhibition free to all, showing some excellent flowers and attracting crowd each afternoon and evening. These private exhibitions will probably be the means of the club making another effort next year to have a show, at least this is the talk of some of the florists.

Mr. C. F. Hale who has just returned from Frederick, Md., where he went as judge at the chrysanthemum show held there last Wednesday is high in his praise of the wonderful success these people have made in the culture of this flower. He says both the specimen plants and cut blooms were as fine as any he has ever seen and would have done credit to New York. They are up to date as to varieties and as Mr. Hale puts it as to culture too. He says it was a matter of love and ambition that prompted those people to go into the culture of the "mums," in no sense was it professional all being amateurs and what was more to their credit they were mostly all grown out doors, the only protection at night being canvas. If the same spirit existed among our profession in large cities, says Mr. Hale, what an immense show we could have.

The single specimens both plants and bloom were excellent, in fact Mr. H. says he had never seen finer. They offered premiums for both plants and flowers, mostly in collections of threes and sixes.

Last Friday profoundly impressive ceremonies were held at the Russian legation here in memory of the late Czar Alexander III. As there is no Greek church in Washington the parlors of the legation were for the time being transformed into a place of worship, with an altar for the celebration of the mass and ritual of the Greek faith. About the altar were banked palms and ferns reaching from the floor to the ceiling, extending across the entire room. Among the ferns were immense clusters of white chrysanthemums gracefully arranged so as to fall outward; out of the center of these plants and flowers arose a Greek cross of crimson velvet, bearing on its arms mosaics of the Saviour and Madonna. The altar cloths were of rich yellow satin embroidered in gold while the censurers, candelabra and vessels of the sacrifice were in unique oriental workmanship. The decoration was by C. F. Hale. The president, cabinet and all the foreign diplomats were invited and attended in a body.

The magnificent display of chrysanthemums at Small's floral establishment attracted an immense crowd all the week. The exhibition is complete and artistic in every detail. In main window of the store a picturesque stump extending its bark covered limbs to the ceiling affords a resting place for some fine orchids with a ground work of ferns, *Adiantum cuneatum* and *Farleyense*, with a small fountain in the center. At the foot of the tree was a bank of *Cypripedium*; at each of the four corners of the window were bunches of magnificent chrysanthemums. The "mums" which naturally were the chief feature of the exhibition were unusually fine, both in size and color, and included the choicest as well as the most popular varieties. There are also other flowers, orchids, roses, ferns and palms. At the rear of the spacious store was a wedding decoration and along the sides were plants with brilliant flowers backed by ferns made all the more effective by myriads of tiny electric lights.

REYNOLDS.

Boston.

The annual chrysanthemum dinner of the Gardeners' and Florists' Club at the Tremont was altogether one of the most successful of the many festive occasions in the club's history. Among the faces in the long rows that lined the gorgeously decorated tables were numbered many welcome guests who had come from neighboring and distant states to admire the crowning triumphs of American chrysanthemum culture at Horticultural Hall and to meet and congratulate the growers to whose skill and devotion Boston's supremacy in this line is due.

"You will now come to order, gentlemen," said President Welch as soon as the menu had been satisfactorily disposed of, and with a few preliminary words of cordial welcome to the many eminent visitors he introduced the toastmaster of the evening, Mr. Edward Hatch, "who it is that can polish you off to the queen's taste." Uproarious applause followed this expressive announcement and the popular toastmaster was assured in boisterous chorus that he was "all right."

The first speaker called upon was Prof. B. M. Watson of the Bussey Institution, who was listened to with close attention as he paid an eloquent tribute to the

achievements of the florists' organizations in America, whose work in behalf of the profession he likened to his own work as a teacher, claiming that he would feel perfectly satisfied with the results of his labors if he could make the same advance in the education of young men as had been attained by the chrysanthemum growers in their chosen specialty. Mr. E. M. Wood of Waban Rose Conservatories was next called upon. In the course of his remarks he recounted his experiences of the past twenty-five years in marketing flowers, which he claimed was only second in importance to growing them, and brought down the house when he referred to the wholesale florist as a luminary that "shines for all," and alluding to the new methods of marketing advocated by some, quoted from Shakespeare to the effect that "we'd better endure the evils which we have than to fly to others which we know not of."

A mighty cheer greeted the "Nestor of Boston florists," Mr. John Galvin, and "He's a jolly good fellow" was sung with a will. Mr. Galvin told of the pleasure it gave him to have the opportunity to look upon the old and familiar faces as well as those that were younger and reverted to the time in his recollection when it was "as hard to find a gardener as to find a millionaire," and when a man would have been adjudged crazy if he had predicted that such a gathering as the present would ever become possible.

Two "big men from a little State" were Mr. T. O'Connor and Mr. T. McCarthy of Providence, R. I., who received an enthusiastic welcome. Mr. McCarthy, who is superintendent of Swan Point Cemetery made a facetious allusion to the bond of sympathy which exists between the florist and a man in his position, promising to do any service in his line for them in the future if called upon, which brought Mr. Hatch to his feet with a vigorous protest against such a possibility in his own case for many years to come.

Judge Hoitt spoke for New Hampshire. He paid a high compliment to the gardeners who had contributed to the great display in the hall across the street and congratulated the committee who had made such a success in arranging for the feast and said that no man does justice to himself if he does not attend these annual festivities. The judge kept up a continuous fusillade of wit of which Messrs. Hatch and Norton were his special victims and the repartee between these two worthies was indescribably funny.

New Jersey had an eloquent representative in the person of Mr. W. A. Manda who referred pleasantly to the time when he was a Bostonian and to the early days of the club. Chrysanthemum shows, he said, were then in their infancy, and much merriment was created by his narration of the circumstances connected with his first contribution to a chrysanthemum show, when he had been advised not to exhibit lest he should hurt the feelings of another prominent exhibitor without whose favor it was not believed possible to conduct a successful chrysanthemum show. He concluded by asserting that he had never before seen such grand blooms as were now on exhibition at Horticultural Hall. Mr. Sam Goldring from Albany, N. Y. and Mr. Jos. A. Dirwanger from Portland, Me., were also heard from and both brought kindly greetings. Messrs. M. H. Norton, Lawrence Cotter, J. Nicol, W. H. Elliott, J. H. Woodford, Jackson Dawson, T. W. Dee, W. J. Stewart and other local lights

made brief remarks, and Messrs. Carroll Galvin, C. J. Dawson and Walter Mott rendered several songs with great success. The concluding speech by Warren Ewell was the great event of the evening. Telegrams conveying cordial greetings were received from Mr. Edwin Lonsdale of Philadelphia and Mr. J. S. Cowles of Newport, R. I.

The collection of twelve specimen plants from W. Hunnewell which took first prize at the chrysanthemum show consisted of the following varieties: *L'Enfant des Deux Mondes*, W. H. Lincoln, *Arethusa*, Mrs. E. B. Freeman, *Vernal Falls*, Iora, *Pink Louis Boehmer*, Miss Minnie Wanker, *Portia*, G. W. Childs, *Primula* and *Columbine*. These plants bore from 200 to 250 large blooms each.

Among the visitors to the show in addition to those participating in the after dinner exercises were C. G. Weber and C. H. Joosten, of New York, D. H. Burns, Yarmouth, Me., Wm. Henry, A. H. Winggett, and J. Folwell, Lenox, Mass., G. McWilliam, Whitinsville, Mass., E. O. Orpet, So. Lancaster, Mass., A. Brandt, Wm. Nicol, Saml. Peck and R. McLeod, Newport, R. I., J. H. Fanning and C. W. Smith, Providence, R. I., A. Wallace, Portland, Me., Geo. H. Mass, Brattleboro, Vt., Robt. Patterson, Portsmouth, N. H. and C. Warburton, Fall River, Mass.

Aster grandiflorus from Rea Bros. and *Aster trinervis*, a novelty from Japan shown by George Hollis, were much admired on account of their beauty as well as their late blooming season.

The customary fall auction sales of dormant roses, etc., by N. F. McCarthy and Edward Hatch have realized prices fully up to the average of previous seasons.

Peter Ball is cutting *American Beauty* in fine quality and the market needs them all.

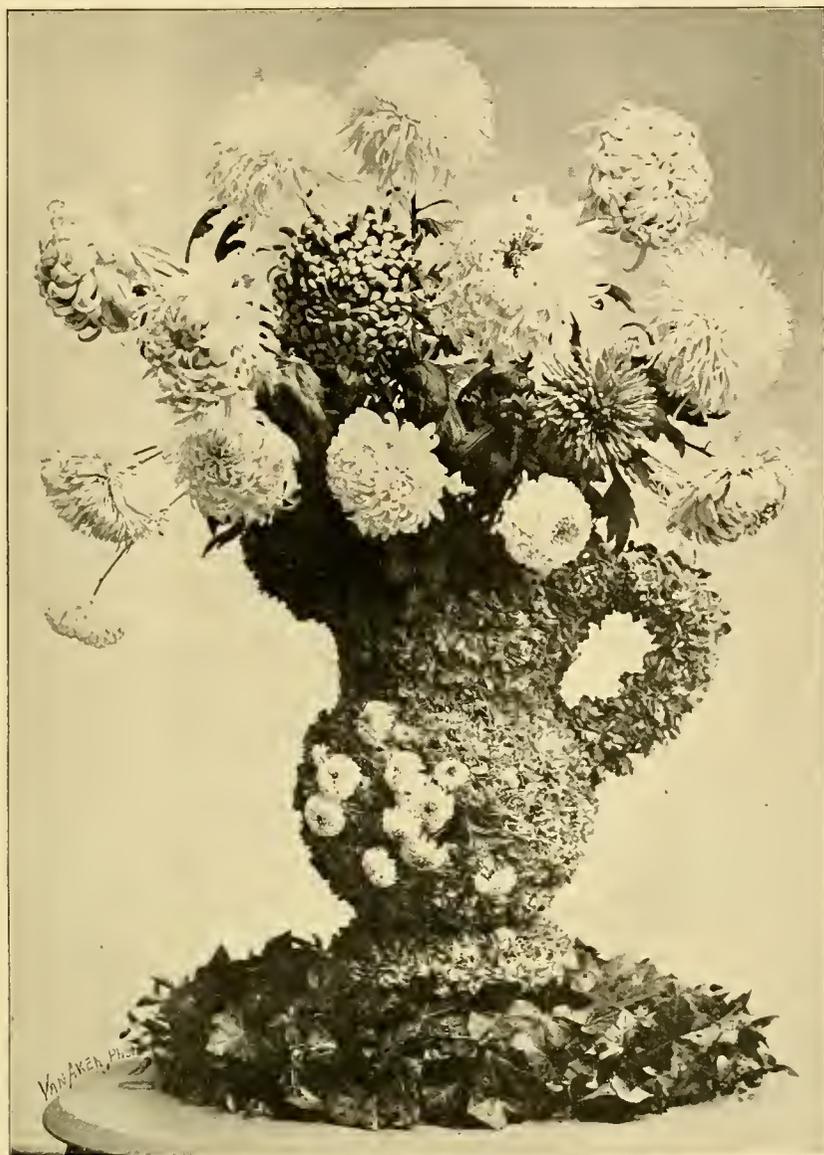

Buffalo.

Winter came down with a flop and covered us with four or five inches of snow. Never mind; it makes the "mums" look all the better. Several of the stores have been making extra fine displays of chrysanthemums, and instead of a chrysanthemum show there has been a series of small shows. Rebstock was the first; then came W. J. Palmer & Son, Anderson, Adams, and now Scott is holding forth. I can hardly say that chrysanthemums have lost any of their popularity in this city; they sell quite as well as last year. There is no use of these megatherian flowers; people don't want them and will not pay for them; about \$2.50 or \$3 is what a dozen first-class flowers will bring, extra choice a dollar more, and plenty of good flowers go at \$1.50 per dozen. Roses are coming in to town in increased quantities, and quality A1. Carnations and violets are plentiful enough. It matters not what you have now; they are all overshadowed by Miss M. Wanamaker or Engene Dailedonze.

A good turn out of the club was held at the house of the treasurer, Mr. E. I. Mepsted, on Tuesday last. A very interesting paper was read by Mr. Wm. Legg, "Recollections of gardening at Hampton Court."

On all sides you hear them say "too bad we don't have an exhibition." If they will only keep this sentiment alive we shall fall in line another year, and I hope sincerely we will.

Mr. Mepsted recovered quickly from his severe illness and was able to take himself and a few boxes of "mums" over to Ham-

AN ARRANGEMENT OF CHRYSANTHEMUMS BY G. P. RAWSON, ELMIRA N. Y.,
DISPLAYED AT HIS EXHIBITION.

ilton for exhibition, where he had to compete against some dandies, but he returned with a fair share of the premiums.

I took a run to Corfu the other day. They are all looking fine, and an immense lot of carnations will be cut there this winter. T. A. Webb grows Daybreak, W. Scott, Portia, Lizz e McGowan and Nellie Lewis. Besides roses and carnations he had one large house of chrysanthemums of the very first quality; in fact they have been the largest flowers sent to town this year. He only grows a few varieties, but he grows them well; Mrs. Whilldin, Minnie Wanamaker, W. H. Lincoln and Ivory are what suit him best. Mrs. Edwards' houses are looking fine, carnations and violets in good order. Mr. Giddings is cutting a large lot of A1 carnations; with the exception of a few violets his whole five houses are carnations. Mrs. Tyrell besides four houses of carnations has one house of violets, and they are doing grandly. Her latest house built last summer is butted glass, with the cypress bar and cap, and she says "No more putty for me." She is delighted with the house, and so is everybody after

they have once had the sense to try it. At the east end of the pretty village are the four carnation houses of Wm. Scott. I found his son Aleck, who runs the establishment, indoors practicing a new duet on the piano. He has only been married about a year, and will in all probability soon outgrow that sort of thing. The carnations are in good order, but rather backward. A few flowers of Sweetbrier show up good; it is a beautiful flower, and if it's a good producer is a very valuable variety.

Your correspondent had the great pleasure as well as honor to act as one of the judges at the big Chicago show. He has seen several good shows both east and west, but sincerely thinks it was for general effect the best up to date. Few cities have such a spacious hall to hold an exhibition in. Without in the least criticising, it was to be regretted that the magnificent vases of chrysanthemums—hundreds of them—as well as roses and carnations, could not have been displayed on the ground floor. They were largely in the galleries. I suppose it was impossible to give them room downstairs. My

colleague Grove P. Rawson has reviewed the varieties at such length that I won't attempt to do anything of the kind. I predict a bright future for Dorner's new red, E. M. Bigelow, and Vaughan's new Japanese yellow, Mrs. W. H. Rand, is a most distinct and beautiful flower which all retailers must have. The list of varieties is now overwhelming. Mr. Bennett said he grew 500 varieties; Mr. Rawson thought he had about 300 sorts; to try and remember distinctly one-third of the number is enough to produce paresis, or rather irritation of the diaphragm. Chicago does everything on a large scale, and when you have such enthusiasts as Mr. Chadwick and Mr. Egan at the helm things have got to go. That little party round the round table will long be remembered, and for a hearty welcome and many kindnesses I am ever grateful.

W. S.

Worcester, Mass.

The inclemency of the weather during the past week caused a very material decrease in the sale of flowers, but we have not such an accumulation of stuff as to cause any uneasiness. The "Queen of Autumn" still reigns supreme and the windows are filled with splendid flowers, the largest blooms averaging from twelve to fifteen inches across the top. Roses are good and selling well, and carnations are improving every day; violets are the only thing that are not very plentiful, the snow having put an end to outside Russians.

The annual meeting of the Worcester County Horticultural Society was held November 7 and the following officers elected for the coming year: President, Henry L. Parker; vice-presidents, Stephen Salisbury, George E. Francis and O. B. Hadwen; secretary, Edward W. Lincoln; treasurer, Nathaniel Paine. After the regular meeting the trustees held their annual meeting and elected Pres. Parker and Fred H. Chamberlain auditors; judges, Albert H. Lange on flowers, James Draper on fruits, and Charles Greenwood on vegetables. Messrs. O. B. Hadwen, James Draper and F. A. Blake were appointed a committee to arrange for public meetings to be held weekly this winter. A. H. LANGE.

DETROIT, MICH.—There was no regular chrysanthemum show here, but several of the florists held private exhibitions, advertising them freely. B. Schroeter has opened a new store at 59 Miami avenue, where he held an opening exhibition. The Detroit Floral Co. held a chrysanthemum show at their houses, so did Breitmeyer & Sons, who have been doing some very attractive advertising. S. Taplin has been busy with funeral work and nursery planting.

ST. JOSEPH, MO.—On November 3 Mr. D. M. Reichard reopened his city store at corner of 5th and Francis streets, and on the opening day made a grand display of plants and flowers that was warmly commended by the local press. The visitors were so numerous that during the afternoon the street in front of the store was pretty well blocked with carriages, and the "opening" was altogether a pronounced success.

ASPINWALL, PA.—Messrs. Zieger Bros. now have about 8,000 feet of glass in which they grow cut flowers and bedding plants mostly for the wholesale market.

JACKSONVILLE, ILL.—Mr. Frank J. Heinl has been elected county clerk.

Address THE AMERICAN FLORIST CO., Chicago.

The Florists' Protective Association.

This offshoot of the national society has surely accomplished a great work. The annual dues of \$5 are ridiculously low, considering the direct money value of the confidential reports to members. Rarely a week goes by but what we hear of instances where members were saved from making bad accounts by the inside information supplied by the association. If everyone in the trade should join and assist in completing information on file with the secretary it would soon be absolutely impossible for any dead-beat to do business, and the association has already made it mighty hard scratching for them.

It is to the interest of every buyer as well as seller to have the dead-beats weeded out and drummed out of the trade. To be sure a wellintentioned man is occasionally listed when non payment is due to reasonable counter claims. But this is rare, and as the facts are sure to come to light on investigation the right result is attained in the end. And there is no dealer to whom the reports of the association are not worth many times the annual dues in the course of a year.

Lilium Philippinense.

L'illustration Horticole says: "This species although of but recent introduction has already taken a position of great eminence and merits to be classed among the most beautiful and useful lilies. It has the advantage of taking up but little room, its stem is slender, the leaves short, its height modest, hardly exceeding 15 inches. From this point of view and also on account of its perfume being less violent it excels *L. longiflorum*, the flowers of which are certainly larger and more effective but are also a little cumbersome. *L. philippinense* was discovered by M. Roebelin the well known collector of orchids. It flowers in summer, grows easily in pots of small size and gives remarkable flowers in proportion to its stalk."

Work for the Rose Society.

Here's an opportunity for ye Rose Society: To test and report on Belle Siebrecht, Mrs. Pierpont Morgan and the new rose from Tiffin, Ohio, before some of us burn our pockets and have nothing to show for it later on, save dearly bought experience, if failure is the result, as it often happens in proving novelties.

You cannot always judge on the face of a thing what the fact is going to be; the proof of the pudding includes the sauce.

G. P. R.

OWING TO pressure of other matter we have been obliged to defer the promised illustrations of the mantel and table decorations at Chicago to a later issue.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS, Toronto, 1st vice-president; A. L. DORN, 114 Chambers street, New York, secretary and treasurer.

BEANS, especially wax varieties, are a little lower in price.

MR. E. SCHAEFFEL is making a business and pleasure trip to California.

VISITED CHICAGO: F. W. Barteldes, J. E. Northrup, I. A. Robbins, C. C. Morse.

JANUARY 1, '95 is the date for Vol. 1 No. 1 of a new horticultural trade journal backed by a leading florist and seedsman.

RED WETHERSFIELD onion does not seem to weaken; we hear of sales at \$1.35, and few sellers at that. Yellow varieties are rather easier.

CARIBOU, ME.—Geo. W. P. Jerrard has disposed of his seed business to the G. W. P. Jerrard Co. and will go south for the winter. Seed potatoes are a specialty with this house.

ST. LOUIS.—On the morning of November 4 the entire stock of seeds, etc. in Jos. F. Dickmann's store at 1110 North 3rd street was totally destroyed by fire, there not being \$5 worth of salable stock left, the total loss on stock of seeds and fixtures amounting to at least \$6,000, and on the building \$2,000. At this date, November 6, the work of clearing up the burnt stock is being pushed forward and by December 1 it is expected that the 3rd street store will be again ready for business. At present time all orders are being cared for and stock received at the Gravois and Oregon avenue store and warehouse.

IT IS BELIEVED that the Secretary of Agriculture will ask the next Congress to abolish the distribution of seeds. In view of this fact concerted action of the American Seed Trade Association as a body and by its members as individuals through their representatives in Congress ought to be made promptly and energetically that this long rooted abuse may be done away with. The injustice of the plan to tax the general public to pay for seeds that the Department may give away to those who are too lazy to save or too stingy to buy needs no argument; it is but one of the many very plain reasons why the Government seed shop should be abandoned.

ASHEVILLE, N. C.—The Idlewild Floral Co. held a very attractive chrysanthemum show at their greenhouses, opening Nov. 1. The plants were very fine throughout, including most of the newer sorts. Seedlings originating at Idlewild were also shown, among them Deaconess, a large white. A children's chrysanthemum show was also held in Asheville, the exhibits being plants given to the school children last spring by the Idlewild Co.

ST. JOHN, N. B.—Mr. D. McIntosh, gardener to J. A. Allison, Esq., was married on October 17.

WEIGHS BUT 4—STRONG AS 40 LBS.

"You Save Enough in Expressage to Pay their Cost in a Week."

A New Shipping Box for Cut Flowers,

"The Perfection."

This box is designed to fill the needs of the growers of cut flowers, who require something that will combine lightness with strength, and which can be furnished at a moderate price. The "Perfection" is made of well-seasoned poplar wood, 1/4 inch in thickness; brass corners; cleats on bottom outside; stays inside, at ends and in middle; each box fits perfectly on top of the other and adds to the strength; one lid is supplied to every three boxes.

They are heavily varnished with shellac outside and in, and absorb no moisture. Being manufactured for me in quantity, I am enabled to offer them to the trade at the following very reasonable prices:

No. 1. Size, 36x12x6 ins., in sets of 3, per set, \$2.40.

No. 2. Size, 30x12x6 ins., in sets of 3, per set, \$2.25.

The "Perfection" is already in use by many of the largest Philadelphia shippers, and is strongly recommended by them.

A box practical and durable, light and strong, and with all the other good features described above, which can be sold for the low price of 75 and 80 cents per box (in sets of 3), is certainly a boon to all flower growers. Inspection invited. Mail orders will receive prompt attention. Send for a sample set at once. If not pleased with them I will refund your money.

WHAT THEY SAY:

From C. E. MEEHAN:—"I consider the 'Perfection' Cut Flower Shipping Box which I am now using, the best that I have yet seen for carrying or shipping cut flowers.

It combines lightness with strength, and being well varnished the wood absorbs no water."

(Signed), CHARLES E. MEEHAN.

What MR. KIFT says:—"The 'Perfection, Cut Flower Shipping Box for those handling large quantities of flowers, is, I think, the best thing of its kind up to date. It has all the improvements suggested by the principal cut flower growers of Philadelphia, and is considered by them to be the best thing of the kind in the market."

(Signed), ROBERT KIFT.

From MR. JOSEPH HEACOCK:—"I have found these Boxes much superior to baskets for carrying roses and other cut flowers in. As they are quite shallow the flowers do not get bruised, and being well made are very durable, and being are made of poplar wood, are very light in weight."

(Signed), JOSEPH HEACOCK.

G. G. WATSON, WHOLESALE SEEDSMAN, Philadelphia, Pa.

ROOTED Verbena CUTTINGS

Ready for Immediate Shipment.

They are perfectly healthy, and the best named varieties.

Price, \$1.00 per 100; \$8.00 per 1000.

J. L. DILLON, Bloomsburg, Pa.

Denver.

The election created quite a little flurry in the flower world on Tuesday, the 6th inst. It having become known that the Republican candidate for Governor, Mr. McIntyre, had at some time expressed himself as to his favorite flower, naming the yellow chrysanthemum, on the afternoon of the election when it looked, without doubt, that he was elected, the many ardent admirers of the Republican party appeared arrayed with mammoth blooms of Golden Wedding, Kioto and other yellow varieties in their buttonholes. One enterprising florist immediately had printed a large number of small pieces of ribbon bearing the words "McIntyre Plumes," which he pinned on the coats of all purchasers and a rushing business until the "wee small hours of the morning" was the result of the timely bit.

W.

Of Interest to Nurserymen.

ST. PAUL, MINN., Oct. 14.—In the United States Circuit Court yesterday was heard an application for a writ of habeas corpus in the case of C. H. Schlechter, an employe of Bryant & Son, nurserymen of Princeton, Ill. Under one of the provisions of the Minnesota statutes a nurseryman selling goods in the state must file an affidavit and a bond. This law was not complied with by Bryant & Son or their agent Schlechter. He was arrested at Albert Lea, and as he would not pay the fine of \$50 was sentenced to the Freeborn county jail for thirty days. The attorneys for the petitioner proposed to test the constitutionality of the law. They maintain it is not a proper exercise of the police power of the state, and that it is in contravention of the law allowing freedom of inter-state commerce. Judge Sanborn discharged the prisoner, declaring the law to be unconstitutional for the reason it is an interference with inter-state commerce.—Chicago Tribune.

ADIANTUM FARLEYENSE AND ADIANTUM CUNEATUM, in all sizes.

MIXED FERNS in 2-inch pots, and a fine lot of the most useful DRACAENAS for Decorative purposes. We are continually receiving this season very complimentary letters from our customers in reference to the plants sent out. One writes November 10th, 1894, "They are the finest Ferns I have ever received, and in quality far surpass those of the same variety at much higher prices purchased elsewhere. With the intention of buying my Ferns of you hereafter, I remain, very truly yours, K. W. L." Write for quotations.

PITCHER & MANDA, (Incorporated), SHORT HILLS, N. J.

SWEET PEAS FOR 1895. FLORISTS!

The Sweet Pea is my one Specialty. For three years I have been getting ready to supply high grade seed to those who want to grow the finest sorts for cut flowers and exhibition. Hereafter I expect that every packet I send out will be equal in quality to Eckford's sealed packets.

I do not care to sell in quantities above an ounce. I have a special grower working under my direction, and growing Eckford's latest novelties for me.

Last May I visited the California growers at their invitation, and expect to visit England next Summer to complete the literature of this flower that I am at work on.

Beside the 1895, 1894, 1893 and 1892 novelties I have a select stock of every variety known to the trade. SEND FOR MY FLORIST PRICE LIST.

AMERICAN BEAUTY, strong plants.

A. S. MacBEAN, Lakewood, N. J.

Chicago.

The "mums" have seen their best days for this season; many of the best benches are already cut out. Queens are nearly gone, and so are the best of Ivory. Mrs. Bullock, or Domination as we name it here, is still with us; Mrs. Jerome Jones also is still good, but as a commercial flower has one weak point, like the Queen, it drops quickly. Lincoln and Harry Widener are the best in yellow. Widener though is not up to former years; on the average there are a great many imperfect blooms in the lots offered. In pink we still have some good Balsley; Vivian-Morel is pretty well cut out. The demand for "mums" is rapidly falling off, and to judge by present appearances the late varieties will find but little demand.

The very bad weather of last week and the early part of this has shortened the supply of roses, although there is an ample supply of most sorts for the needs of the trade. First-class American Beauties are quite scarce. The smaller teas have not recovered their lost ground yet as regards prices. For small lots of selected stock such sorts as Meteor, Test-tout, Bridesmaid, Brides, etc., 3 is realized, and an occasional lot may bring a point above that, but the average doesn't exceed 2. Good carnations are fairly active, with \$1.50 per hundred for the best, fair average quality \$1. Violets have shortened up again, and prices for good bloom advanced to \$1.50. Valley continues in excellent demand at 4. Romans have made their appearance, but there is no demand for them as yet. Some really fine mignonette (Machet) is noted; this is held at 3, but seems to move rather slowly.

In retail circles there is something doing in decorations for receptions, etc., but the transient business is reported as extremely quiet.

Among recent visitors were C. B. Whittall and wife, Milwaukee; D. B. Long, Buffalo; W. A. Harkett, Dubuque, Ia.

Bids and plans for the new conservatory to be built in Jackson Park were submitted to the South Park Commissioners November 14. The bids ranged from \$125,000 to \$78,000. The matter was laid over till next meeting.

The Chrysanthemum.

Willie boys are again hiding behind chrysanthemums.—Pittsburg Chronicle-Telegraph.

We have reached that season of the year when the callow youth delights to fasten himself to the rear end of a big chrysanthemum.—Washington Post.

In Pittsburg one of the most highly esteemed compliments that can be paid is to name a chrysanthemum after a citizen. Thus has the exaggerated fennel superseded the laurel.—Washington Star.

ST. THOMAS, ONT.—A very attractive chrysanthemum display was given by Hugh McLean at his greenhouses here, the show opening November 3. The houses were effectively arranged and decorated with Chinese lanterns. Each lady visitor was presented with a flower on leaving. Fine specimen plants were displayed, as well as cut flowers, and the show was greatly admired. There is no doubt it will be a telling advertisement to Mr. McLean, as well as the trade generally.

NEWPORT, R. I.—Mr. H. J. Hass has completed the improvements in his Thames street store, and it is now one of the most attractive in the city. A new plate glass front affords facilities for an elegant window display.

Chrysanthemum Stock Plants.

Extra strong, field-grown clumps, in perfect health—not bench-grown stock exhausted by over feeding which seldom give satisfaction, as they produce weak, sickly plants.

A. A. Sturges, Ada H. Leroy, Eiderdown, J. H. Cliffe, Joey Hill, L'Enfant des Deux Mondes, Mabel Simpkins, M. B. Spaulding, Mrs. H. F. Spaulding, Niveus, Pres. W. R. Smith, Snowflake, Thos. H. Brown, Vivian-Morel, Wanless, 25 cents each.

HOLLY

It is conceded that the successful delivery of perishable stock in the best condition exactly when demand is active is secured only as the result of considerable experience and close study of all the controlling conditions. During the past ten years we have studied these conditions and have the experience. We have faith that we can supply "First-Class Stock on Time," and to prove our faith by our works, on all orders given us in season, we will **Guarantee arrival** or no pay. We attempt no competition in price with stock which has never yet arrived, or—arrived after Xmas. "A Case of Holly in front of the store is worth four (4) on the cars."

HERMANN RÖLKER,
218 Fulton Street, NEW YORK

Toronto.

Twenty-two gardeners and florists from this city visited the Hamilton chrysanthemum show last week. Some took exhibits with them and others went just to see the show and have a good time generally, and I did not see one exhibitor or otherwise in the course of the day but what appeared to be having a most excellent time. The Hamilton boys treated us right royally and made everything lovely. Of the show I do not intend to say much, no doubt your correspondent will give a full description. There was a fine show of cut bloom but plants were scarce, not but what there are plenty of plants in Hamilton that might have been shown, but many of the florists there don't seem to realize the importance of these shows or the good they do or else one is afraid of being beaten by the other, at any rate they kept their plants at home. But those who did show, Brown Bros. and F. G. Foster, deserve all the more credit and will no doubt reap the benefits in an increased trade. The other fellows will realize in due season that in these times it is absolutely necessary to keep in the current or they will be left high and dry. Brown Bros. had some really magnificent flowers, they will no doubt be heard from at the Toronto show. Those from Toronto who exhibited were Messrs. Gilchrist, Dunlop, Tidy and Dale. Wm. Scott, represented by E. Mepsted, also brought over some of his "daisies." Mr. S. Aylett, gardener to Senator Sandford, put up a very fine group of plants. Now if the Hamilton boys will only come to Toronto we shall not only be able to show them a first-class chrysanthemum exhibition but will also endeavor to make some return for the kindness and hospitality experienced at their hands.

Is there another white chrysanthemum that can beat The Queen as an exhibition flower? They say that Niveus takes better with the ladies and sells better. Both are exquisite and both were shown to perfection at Hamilton.

Snow has fallen and is still on the ground, the thermometer has been down to 20°, which has of course put a stop to all outside vegetation.

Some very fine chrysanthemum blooms are to be seen in the down town stores now and there appears to be a good demand for them. Are they not fine things for decorating a store window? Dunlop had a little show of his own in his King street store last week.

Trade has picked up considerably this last week, in consequence of which the boys are feeling better. E.

Atlantic Building, WASHINGTON, D. C.

Nyack, N. Y.

Rummler & Walz, the new-comers to Nyack, are sending some fine stock to the New York market. Their establishment consists of three rose houses, each 150 feet long, two carnation houses and one violet house of the same length. Their violets are clean and healthy and full of buds, and the prospects are that in quality they will equal the best sent to market this season.

W. R. Davison is also in good shape with his violets, which have shown no signs of disease of any kind this season. Mr. Davison says that Lady Hume Campbell is a poor violet for the house, and that the cold frame is the place for it. He uses nitrate of soda and cow manure on his violets once every two weeks. W.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Doppfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all. Send for price list and samples and we know you will give us an order.

OAKDALE, MASS.—Messrs. Alterman & Shepard have leased the greenhouse of George Smith.

MARBLEHEAD, MASS.—Mr. Irving Hayden has added another plant house to his establishment on Atlantic avenue.

ORANGE, N. J.—A number of florists in the Oranges have organized as the New Jersey Horticultural Society. These gentlemen have been elected officers: Robert M. Grey, president; George Smith, vice-president; Peter Duff, secretary; and George Van Qualen, treasurer.

THE EXHIBITIONS.

Montreal.

The annual chrysanthemum show of the Montreal Gardeners' and Florists' Club opened November 13 in the Old Erskine Church. This building, though called "old," is not by any means ancient, but is in every respect a modern church building. The light through the stained glass windows during the dark weather which we have had for some days was not as good as one would like, but for that and a few other minor defects it made a very good building for a flower show, and when the exhibits were all arranged a prettier sight could not be easily imagined. The pillars and front of galleries were handsomely decorated with garlands and festoons of laurel and princess pine, and from the roof trusses were hung a number of small bannerets. The cut blooms were arranged on a table up the center, and another across the chancel end. The single specimens, threes and sixes, were arranged in a row at each side of center table. Around the gallery pillars were stood the dozens in square blocks, with the tables with dinner decoration at the chancel end. Along the walls at each side were the mantels and banks. A large space under the gallery at door was filled with specimen palms, tree ferns, etc. A table at the end of the cut flower table was filled with Pitcher & Manda's exhibit of orchids and new "mums."

It being freezing hard all day on Monday only a few plants were brought in, and those that did come were injured less or more; one lot of large specimens was frozen stiff, but they came to pretty well before Tuesday afternoon, although they had a rather sad looking appearance on Tuesday morning. Fortunately Tuesday morning was much warmer, and about ten o'clock it was not freezing, so those living near at hand brought their plants exposed, but by far the greater bulk came wrapped up in cottonwool and tissue paper.

The competition this year in every class was keener than ever before, the quality of exhibits being a great advance on any former year. In the 24 bloom section the competition was particularly close between McHugh and Coupland, Messrs.

Campbell and Robinson being only very little behind.

There were three entries in the class calling for 12 specimen plants; Mr. McHugh's, which took first prize, were much the smallest plants of the three, but they were all as near perfection as it is possible to get them, as to shape, quantity and quality of bloom. Mr. Coupland's set were large plants, exceedingly well grown, with an abundance of bloom, but did not come up to the first lot in compactness or size of bloom. A plant of Ivory in Mr. McHugh's lot was by long odds the finest specimen ever exhibited in this city.

For the 12 plants in 6-inch pots there were three entries, but Mr. McHugh came in an easy winner, also in the six plants in 6-inch pots, and in the three plants in 6-inch pots the same gentleman won easily. For 12 plants in 5-inch pots, single bloom, Coupland was first. In the 50-foot banks there were four entries, Mr. Coupland taking first place with one of the finest collections ever brought together in this city. There were four groups of 25 feet, all of which were very tastefully arranged; C. A. Smith first. In groups of chrysanthemums and foliage plants there were five entries; C. A. Smith first. The groups of stove and greenhouse plants were missing this year, the severe weather preceding the show making it unsafe to transport tender stock. In the mautel decorating there were only two entries, Mr. Jas. Bennett being first with a very tasteful display; Wilshire Bros. second.

In table decorating Mr. Colin Campbell and Wilshire Bros. divided the honors. The tables were for 8 persons, Mr. Campbell's decoration consisting of a centerpiece of Meteor and Bride roses with lily of the valley and adiantum, with a small cocus in the center, supported by four small glasses containing each one Meteor and one Bride rose, a couple of sprays of valley and a spray of Adiantum cuneatum standing on a mat of Asparagus plumosus nanus; the favors were Meteor and Bride roses and lily of the valley, and the boutonnieres Meteor roses and a spray of valley. On Messrs. Wilshire's table was a bowl of about 50 Perle roses for a centre supported by two flat baskets of Meteor roses and adiantum; the favors were Meteor roses.

For the best vase of chrysanthemum blooms there were only three entries, P. McKenna & Son getting first with 36 splendid blooms of about six varieties; Colin Campbell second, and George Robinson third. Messrs. Pitcher & Manda received a certificate for their new chrysanthemum "Canada"; it is a medium sized flower of a buff shade, quite distinct, but its good points require further development before it is worthy of its name. In carnations Puritan was first for white, with Haettel second; Daybreak for light pink, and Wm. Scott for dark pink. Portia is

the best scarlet. Carnation prizes went to P. McKenna & Son, J. Bennett and C. Campbell. The two last named competitors received all the rose premiums. Palm and orchid prizes went to Fred Bennett and W. J. Wilshire. BEAVER.

Providence, R. I.

The annual chrysanthemum show of the Rhode Island Horticultural Society eclipsed all its predecessors in the quantity and perfection of exhibits and in attendance of visitors. Infantry Hall, where the exhibition was held, is well suited for the purpose and the exhibits were well displayed. The plants while not enormously large were exceedingly well grown as a rule, being well proportioned and well furnished with flowers and foliage. The cut blooms were of splendid quality, far surpassing those seen at any previous exhibition; the various types of reflexed and incurved were well represented and what is equally important they were well and tastefully staged. The weather was unfavorable, but notwithstanding this drawback the attendance was very large and indicated that the Providence public is by no means tired of chrysanthemum shows. On Friday evening Governor Brown and members of his staff honored the exhibition by their presence, and the number in attendance on Saturday, the closing evening, was estimated at over one thousand. There was a concert of vocal and instrumental music each evening. The judges were A. H. Fewkes, E. W. Wood and M. S. Cheesman.

On specimen plants Mrs. T. P. I. Goddard led in all the classes. For best single specimen of any new variety she showed a pretty plant of James Comley. On plants grown to single stem and bloom Mrs. T. P. Shepard and F. A. Fairbrother were in the lead. The special prizes for collections of plants not less than forty pots open to commercial florists only brought out some brilliant groups of moderate sized evenly grown specimens for which first and third premiums were awarded to F. A. Fairbrother and second to John E. Pressler. Mr. Fairbrother is an expert in growing neat market size plants as was shown by these groups as well as a comprehensive collection on the stage. E. Carl also made a creditable showing of well grown small plants. There were some nice plants also shown in the amateur classes, much better in fact than is generally seen in this department.

The leading attraction in the cut flower section was the display of vases of ten blooms each in competition for the three silver cups. Here Farquhar Macrae sailed in under full head and captured everything. His blooms of Mutual Friend, Pres. W. R. Smith, J. H. Cliffe, Pitcher & Manda, Minnie Wanamaker, Mrs. Robt. Craig and Ada Spaulding were exceedingly well done and the premiums were well deserved. In the competition for best single flower Mrs. T. P. I. Goddard was first with a splendid bloom of Roslyn and F. Macrae second with The Queen. On fifty cut blooms, all classes, F. Macrae was again ahead closely followed by R. H. I. Goddard, both exhibits being of the highest grade. Mrs. T. P. I. Goddard led in twelve reflexed, twelve incurved and six reflexed, all the blooms shown being noticeable for their uniformity of size and perfect form. John Patterson and Mrs. T. P. Shepard also won honors in these classes. From Pitcher & Manda came an interesting collection of blooms comprising many new introductions.

There were some excellent groups of crotons, palms and other foliage plants from R. H. I. Goddard, Mrs. T. P. I. Goddard and T. O'Connor which added much to the appearance of the show as a whole. N. D. Pierce Jr., who had an attractive booth in the center of the hall for the sale of cut flowers, showed a collection of fifty varieties of carnations of finest quality. From E. Carl and H. E. Chitty also came some good carnations. A new feature was the exhibition of banquet tables shown by two leading caterers. These were fully furnished with china and silverware and decorated one with pink and the other with yellow chrysanthemums. Edward J. Johnston showed a handsome tripod filled with chrysanthemums and a similar arrangement with Daybreak carnations. The quinces, apples and pears in the fruit department were of unusual excellence.

Echoes of the Philadelphia Show.

The vases of fifty blooms of one variety were certainly the most effective and beautiful of all the exhibits, these graceful masses of color attracted more attention from the visitors than any of the other exhibits, without them the show would not have been the success that it was.

Stakes to support cut blooms were not allowed, this is a mistake except in the case of seedlings, which are being judged on the strength of stem, along with size, color, etc. In all other classes exhibitors should be allowed to use what supports they see fit, it adds much to the life of many fine flowers to be supported and when placed on exhibition everything should be done to make the displays as attractive as possible. In most exhibition halls flowers that could be kept elsewhere for a week or more in good condition are often unfit to be seen the second day. In many cases the heavy head of bloom carries a comparatively stout stem down while the flower is yet fresh, this could be avoided by the addition of a light and almost invisible stake. Very large vases of fifty or more should be tied up in some way, as the stems on the flowers are generally the extreme length and it is difficult to make them stay where they are placed without artificial support.

There was a very good supply of roses for all classes of blooms, thanks to the energy of Mr. John Curwen Jr., who as chief in charge of this department was the right man in the right place. One important committee that should be on duty all the time might be called the committee on maintenance, it should be their duty to be about all the time, sprinkler in hand to see that the foliage of the flower stems was always damp, particularly should this be attended to at the close each evening; they should also see to the ventilation so as to keep the temperature just right. Every morning wilted flowers, if any, should be removed and if necessary the vases spread out to make up the space. We speak of this because the necessity of some such committee was evident at the show just closed and other previous exhibitions.

The committee of arrangements deserves a great deal of credit for the way they worked to get things straightened out on Tuesday; it was hard work and plenty of it, but they proved equal to the occasion.

Thos. Myers' plant stands so kindly loaned by him to the society were a great help, and many an exhibitor was enabled with these to give his display an artistic touch and to raise it up as it were in the

vision of the visitors. These stands are made of two cast iron discs, the one at the bottom being half as large again as the upper one. These discs are screwed on to either end of a piece of pipe, making a strong and durable stand, the whole is then japanned which gives it a neat finish and makes it proof against rust.

Henry F. Michell's display of bulbs, seeds, greenhouse appliances and conservatory requisites was very complete and attracted considerable attention.

Taking it all in all the Academy was a good place to hold the exhibition, the ample seating capacity where the visitors could retire and view the show from above and listen to the strains of the music was very much appreciated. The great drawback was the artificial light, the gas burning all day and evening was not conducive to a pure atmosphere. The effect of the light on some varieties, notably Philadelphia, was detrimental as their colors are not brought out as in daylight.

The displays of cut roses were fine, but not large enough, the premiums offered should have brought out more competitors. Among the new roses Belle Siebrecht and Mrs. Pierpont Morgan looked promising, as did also Mrs. Whitney. Meteor was seen very fine, this rose is becoming a great favorite here, while the Bennett of which so much was expected is seen no more.

Another person who is wanted at an exhibition of this magnitude is an advertising agent, the show was well taken care of by the city press, but a live man who makes advertising a specialty would have been worth considerable to the society.

Ermenilda is a fine pink; it has been out for several seasons, two at least. Edwin Lonsdale showed a vase of fifty fine flowers which attracted a great deal of attention. Some one asked him when he was going to send it out.

Philadelphia was a good thing for Mr. Graham, and doubly so for the show, as many came attracted by the newspaper articles on this variety. As the returns came in from the various shows the telegrams were pinned to a long stake attached to the vase and made interesting reading. A cablegram announcing its winning a silver gilt medal in London and another from Williams asking price for whole stock was very conclusive statements as to the opinion of chrysanthemum experts on the other side.

The little Japanese box garden in the lobby was much admired and looked as if it was a small section brought from the Mikado's garden.

Of course the inevitable wet day had to be, but for this the society would have come out about even, as it is there will be a small deficiency. K.

Frederick, Md.

The fourth annual chrysanthemum show of the Frederick Co. Floricultural Society was held at Frederick City November 7, 8 and 9. Each succeeding year the shows of this society have surpassed those of the previous ones. Starting in a humble way in a small store room four years ago, the shows have grown to such large proportions that the Rifles Armory, one of the largest halls in the state, could scarcely accommodate the plants brought this season for exhibition. The lobby of the armory was transformed into a bower of oak leaves, which was in perfect keeping with the autumnal season. Inside the entire armory was encircled with cedar trees, which made an

A GLIMPSE OF THE BALTIMORE SHOW.

excellent background for the flowers. The large tables for cut blooms were nicely arranged through the centre, interspersed with banks of palms and other foliage and decorative plants, while the entire south end was taken up with the exhibit of Charles Hermann, who made a splendid exhibit of foliage plants and chrysanthemums; numberless tiny colored electric lights were scattered through this exhibit that flashed forth now and then, disappearing at times, soon to appear again in all their beauty. It had a very pleasing effect, and was much admired. Hundreds of Japanese lanterns of fantastic shapes, parasols, banners, scrolls, etc., with hundreds of yards of hunting were artistically used in the decorations overhead, all brilliantly lighted with large arc electric lights; it made a perfect fairy-like scene, with the colors of the chrysanthemums beautifully blending with the dark green background of cedar trees, and the attractions were heightened by excellent music.

One of the leading features of the show was the exhibit of amateurs; nothing like it can be seen at any other show in the country. In many instances the specimen plants of the amateurs were as fine as those of the professionals, while their cut blooms were simply magnificent, many measuring 9, 10 and 11 inches. A premium was offered to amateurs for best display of blooms grown in the open ground, to stimulate outdoor culture, and the result was that some of the finest blooms seen at the show were those raised in the open ground, and just before the show the open yards of the members were beautiful to behold with their wealth of noble blooms in all shades. The Frederick amateurs claim they are

way ahead of all others in the cultivation of the queen of autumn.

The display of plants in all classes was better than last season. The display of D. Groff in the professional class was the finest ever seen in the state; his group of fifty specimen plants was hard to beat anywhere; he was easily a winner in this class for first premium. He also took first premium over all for single plant with a grand plant of Wm. H. Lincoln loaded with fine large blooms. In the standard class he received first premium for Princess of Chrysanthemums trained to an umbrella shape, also first premium for plant in smallest pot for a Mrs. Craige Lippincott with a mammoth bloom in a 3-inch pot. His group of 60 single stems made a fine showing. For single plant, one stem, one bloom, H. Trail received first premium for Mme. Marie Hoste.

The display of cut blooms was larger and the quality finer than ever before. In the classes open to all Henry Trail was awarded first premium for general display, among which were all the new varieties of recent introduction along with some of the older favorites. D. Groff's display was also very fine, and he was awarded second premium, and here also were seen beautiful blooms of the new varieties as well as some fine seedlings of his own raising. First premium for whites was given H. Trail for a vase of magnificent Queens. Yellows—first premium to D. Groff for a vase of H. L. Sunderbruch, which were truly grand, the flowers measuring 12 inches in diameter. Pink—first premium H. Trail for vase of Vivand-Morel; any other color, H. Trail for vase of Eugene Dailedouze.

The only seedlings of merit were those

of D. Groff, and he was awarded first and second premiums for two superb varieties; one of them is a surpassingly fine deep large bloom beautifully incurved in form, full to centre, of a lovely waxy pink shade. A leading florist of Philadelphia to whom some of the blooms were sent says it is equal in size and merit to the sensation of the day, Philadelphia; it has been named in honor of this city, Frederick. The other is a large full bloom, style of Nivcus, very early, of a delicate flesh tint, a lovely flower named in honor of the secretary, C. Edwin Kemp.

H. Trail took first premium for display of roses, also first for vase of 50 blooms, cut carnations.

In the amateur class the specimen plants were fully up to last season, while the cut blooms were finer. For best display of plants premiums were awarded to John C. Hardt, J. R. Marken and Chas. Kussmaul, in the order named. For cut blooms awards were made to H. C. Keefer, C. E. Kemp, Rhodes Kemp and L. E. Mulliaix. H. C. Keefer and John Hardt received prizes for vases of cut bloom.

In a class open to all, Chas. Herman received first, and H. Trail second for cut flower design. In amateurs' class C. E. Kemp received first for a dainty bridal basket.

A handsome souvenir book of twenty-eight pages, full of information for the amateur, was freely distributed and much sought after. The judges were C. F. Hale, W. H. King and W. Gude, all of Washington, D. C.; they were astonished at the magnitude of the show for a city of only ten thousand inhabitants. The

president, Dr. Wm. H. Balzell, entertained the judges and other officers of the show at an oyster supper at one of the leading restaurants. Many expressions of regret were heard when the show closed; everybody was chrysanthemum crazy. The florists say they never had such sales of cut blooms. The show was a success financially and otherwise.

C. E. KEMP.

New Bedford, Mass.

Although New Bedford is seldom heard from in a floral way much beyond its borders, it nevertheless possesses some very enthusiastic chrysanthemum growers, who are able to back their enthusiasm by expert knowledge in the cultivation of their favorite flower. The display of chrysanthemums at the annual show of the New Bedford Gardeners' and Florists' Club November 12 to 14 amply justifies these remarks, and places New Bedford in the front rank of cities holding chrysanthemum shows in this state. The old City Hall was filled to repletion with the exhibits and if it had not been for the severe storm a few days previous to the show there would not have been room for all the plants that would have been brought in.

The club has provided a quite liberal schedule and the prizes were freely competed for. One feature which has created much interest in these shows is the offering of a triennial prize by the club in the form of a beautiful sterling silver vase, which must be won two years out of three by any one competitor to become his permanent property. The prize was for six distinct varieties of chrysanthemums in pots and was won this year by Mr. John P. Rooney, gardener for Mr. Frederick Grinnell. As he was the successful competitor last year the vase now becomes his property. He had six exceedingly fine plants which would have made their mark at any exhibition in the country. There were two other competitors in this class, Mr. John Driscoll, gardener to Mrs. Wm. J. Rotch, and Peter C. Keith, gardener for Miss Julia Delano. Mr. Driscoll's plants were but a few points behind those of Mr. Rooney, and one, a Wm. H. Lincoln, was the finest plant in the hall. Mr. Keith's plants were grown in the formal English style and were very pretty, but were much less effective than the others.

Another class which brought out some fine plants was one for twelve plants of distinct varieties and was competed for by Mr. Rooney and Mr. Driscoll, the former receiving the first prize and the latter the second. For six Japanese Frederick Puckering was first, and for three Japanese Dennis Shea was first, James Garthley second and William Keith third. For one Japanese Dennis Shea was first and John Driscoll second. For one Chinese Dennis Shea was the only competitor.

For one specimen of any variety there were four entries and the competition was very close, the plants being magnificent specimens. The first was taken by John Driscoll with a superb plant of Wm. H. Lincoln, and the second by James Garthley, gardener for H. H. Rogers of Fairhaven, with a scarcely inferior plant of the new variety Major Bonnaillon, this was a very beautiful plant and showed what a valuable variety this is for growing in bush form. Dennis Shea, gardener for Horatio Hathaway, was third with a very large plant of Winifred Marshall. Fred Puckering, John Driscoll and Wm. Keith entered good standard plants and

received prizes in the order named. The class for twelve varieties grown to a single stem, one flower to a plant, was very interesting and was competed for by Peter Murray, gardener to Mr. W. P. Winsor of Fairhaven, James Garthley and Wm. Keith, and prizes were awarded in the order mentioned. These were a remarkably well grown lot of plants and included many rare varieties.

The center of the hall was filled with groups of plants arranged for effect and added much to the attractiveness of the exhibition. With a little more space these groups would be greatly improved with an edging of some low growing plants, either foliage plants or small chrysanthemums. Fred Puckering was first here, James Garthley second and Wm. Keith third. There were also prizes for pot grown carnations, violets and tea roses. Very creditable entries were made in each class. There were three entries in the class for group of orchids arranged for effect, Peter Murray taking first prize, Peter C. Keith second and Chas. J. Wood third. Their exhibits filled nearly the entire front of the stage and were much admired.

The cut flower displays were far ahead of anything before attempted here, and some very remarkable blooms were staged. Peter Murray captured all the first prizes on flowers, the other prizes being divided between James Garthley, who was a very close competitor with Mr. Murray, Wm. Keith, Peter C. Keith, John Driscoll, Josiah Eaton Jr. and Chas. J. Wood. The large vases of cut blooms containing not less than forty flowers each attracted much attention and were used to decorate the approaches to the stage. In the classes for ten blooms of a color Niveus, Mrs. Jerome Jones, O. W. Holmes, Golden Wedding, Vivian-Morel and Judge Benedict were well shown.

Tea roses were shown by Peter Murray, James Garthley and Chas. J. Wood, and carnations by John Bros. and Peter C. Keith. R. H. Woodhouse made a nice display of miscellaneous plants which included many skillfully grown specimens.

When it is understood that all the chrysanthemum plants exhibited were grown to one stem the exhibition of plants must be considered a most remarkable one, for many of them measured from five to seven feet in diameter and in many of them the foliage was nearly perfect.

The appearance of the exhibition would have been much improved by the introduction of a few tall palms or evergreens, but with the limited space at the disposal of the exhibitors it may not have been possible to use them. A. H. F.

Milwaukee, Wis.

The Milwaukee show was gratifying to all who care to see good "mums," roses and carnations. Taking everything into consideration the local growers show an improvement in these flowers. The show, as managed by the Florists' Club, was well received by the public, although the weather was discouraging the first day. The arrangement of exhibits left some room for improvement, the general appearance of the hall not being quite as pleasing as last year; there were so many flowers lacking the relief of any foliage. The same criticism may be made of individual efforts; the arrangement in no case did the material justice.

The competition in a number of cases was very close. N. Zweifel's table of cyclamens was beautiful. The roses as displayed showed an increased appreciation

of foliage, but this feature was missing from the carnations.

In the plant awards L. Schandein received first for display of 20, best 12, best 6 yellow, second for 6 white and 6 red. Currie Bros. received first for 6 red and 6 white, second for 6 yellow, display of 20 plants, and standard. N. Zweifel received first for standard. John M. Dunlop first for 20 single stem plants, second for best 12 plants. J. Freitag received first and J. Arnold second for 6 white.

In cut flowers Currie Bros. received first for 20 named varieties; N. Zweifel first for 12 varieties, first for 6 varieties, second for best 20, and vase of 20. Lake Geneva Floral Co. first for vase of 20. Best collection, J. M. Dunlop.

L. Schandein received first for 50 decorative plants and 12 ferns. Certificates of merit were given to J. C. Vaughan, H. von Oven and John Valom.

In cut roses prizes were awarded to Currie Bros., J. Meyer, H. Staep, W. A. Kennedy and Reinberg Bros.; for carnations to H. E. Chitty, M. Zweifel, F. B. Dilger. A. Klokner received first for dinner table decorations, Currie Bros. for vases and bouquet. C. B. WHITNALL.

Worcester, Mass.

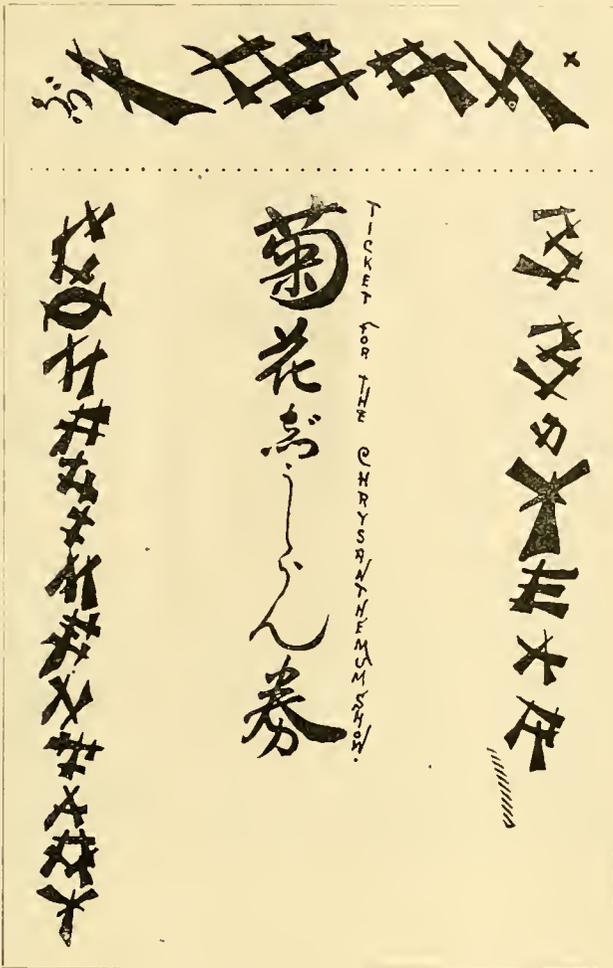

The eleventh annual chrysanthemum exhibition was held at Horticultural Hall November 13, 14 and 15, and the usual raw stormy weather that always strikes us on the opening of the show was with us, tending of course to keep down the attendance and making it rather risky to bring plants without freezing them. Notwithstanding all this discouragement the show was better than ever, and at this writing the attendance promises to more than equal that of last year. Probably the biggest improvement was noticeable in the quality of cut blooms, although Lange showed some magnificent plants that went ahead of anything ever shown in this town.

The arrangement of the hall was similar to that of last year, differing only in some of the minor details; coming into the hall the first thing that struck the eye was the large round table containing the vases of mixed varieties, that were only second to the vases of one variety, which held the most magnificent lot of blooms ever exhibited in the hall; one vase of Vivian-Morel shown by Lange was especially fine, the flowers averaging seventeen inches.

A splendid specimen of Kentia Belmoreana surmounted the table of twelve and six specimen blooms, which were far ahead of those shown in 1893. Among the best flowers on this table were Niveus, Queen, Harry Balsley, Mutual Friend, H. L. Sunderbruch, W. H. Lincoln, Vivian-Morel, Mrs. Jerome Jones, Beacon, Wm. Seward, Golden Gate and Golden Wedding; the largest bloom, Niveus, was shown by F. A. Blake. On the stage a glowing mass of color, relieved here and there by palms and ferns of more sober hue, was displayed by H. F. A. Lange, and the east side of the hall was banked with the displays of C. D. Thayer and the State Asylum, while on the opposite side were the amateur exhibits, which were very creditable. Moral—the "mum" has come to stay.

Following are the principal awards:

Plants: H. F. A. Lange first for 12 plants, 6 plants, display in pots, specimen plant and 6 plants grown to single bloom. Lange also received first for 12 cut blooms, 24 sprays, vase of one variety and vase of mixed varieties. F. A. Blake received first for one cut bloom, and M.

A STRIKING ADMISSION TICKET

F. Briery first for 6 cut blooms. In the amateur class Mrs. E. C. Brooks received first for three pot plants. SEEDLING.

Oshkosh, Wis.

With but few exceptions this city has produced the finest chrysanthemums, both plants and cut blooms, in Wisconsin. As it is gotten up and managed by the Oshkosh Florists' Club the city gets the credit for it, but all the officers of the club are ladies, and the whole affair is conducted by them. It is a pleasure to note the interest taken in the Chicago show by the ladies who judge the floral arrangements, but we know of no other city where the ladies make such an organized effort for the production of flowers, and the enjoyment of them by many. Mrs. E. P. Sawyer, president of the club, produces, with the able assistance of Mr. Lewis, a fine lot of specimens. With a president like Mrs. Sawyer and a secretary like Mrs. Steele success is assured. The side room for refreshments is always a taking feature at the Oshkosh show, and might be copied by other places with advantage.

Mr. Lewis won 14 first prizes, Isaac Miles 3. John Nelson was a very close competitor in the principal entries; his basket of flowers was far superior to any other, and his orchids were good. Robt. Mahlman (amateur) received two first premiums; Mrs. Jno. Wood had the best white carnations. A few seedlings from J. C. Vaughan attracted considerable

attention. "Shavings" is a curiosity; its name tells all about it; Mrs. W. H. Rand, a ragged yellow, is quite a departure from older varieties, and Burt Eddy a beautiful flower. The display of roses and carnations was fine. The attendance seemed good, in spite of bad weather.

C. B. WHITNALL.

Kansas City, Mo.

The chrysanthemum show held under the auspices of the ladies of the Lutheran church the 7th, 8th and 9th of November at Armory Hall, was a great success, some \$800 being cleared for the benefit of the church. Probst Bros. Floral Co. had a fine display, especially of single stem plants in 5-inch pots, and some excellent cut blooms. Heite Floral Co. were strictly in it. Their plants were dwarf and well flowered and sold readily. James Payne had a very nice little display, a good portion of the plants being the old Diana, which took very well. Nelson Jarrett's display was very neat, also that of V. J. Barnes and Albert Barbe. R. S. Brown & Sons decorated the hall with fine palms. The boys are all inspired by the success of the show and there is some talk of forming a club, giving out own shows another year. Business the past week has been very good. Mr. A. Newell has just put the profits of two months into a 2:30 horse. He is a dasher, and it don't take him long to run out and sample Murray's cider. S. MURRAY.

New Orleans, La.

The Horticultural Society held a private show here in Mr. Simon's store. There was an excellent display, including some fine seedlings. A plant of W. G. Newitt, exhibited by J. A. Newsham, was the finest specimen shown. Mr. Newsham's plants were all fine, and he also exhibited a quantity of cut flowers. Harry Papworth, gardener to Mrs. Richardson, showed some fine specimens, and also seedlings. John Eblen showed a good collection, and C. Holst a number of seedlings. C. W. Eichling made a liberal display of cut blooms. R. E. Simon had a large collection of chrysanthemums, including the newest varieties, and also a display of roses and floral designs. Though gotten up primarily merely as a private show among the florists many of the general public were glad to avail themselves of this opportunity to view such a good display.

A Striking Admission Ticket.

We present herewith, through the kindness of Secretary Gale, a fac-simile of the complimentary ticket issued by the Hampden County Hort. Society, Springfield, Mass., for its chrysanthemum show this year. As will be noted, the lettering is in imitation of Japanese characters, with "1894" across the top, "complimentary" down the left hand side, and "33d year" at the right. In the center are evidently some genuine Japanese characters with English translation. On the lower part of the ticket appeared the official seal of the society.

Chrysanthemum Society of America.
PHILADELPHIA.

Following are the additional new chrysanthemums awarded certificates of merit by the Philadelphia committee of the Chrysanthemum Society of America:

Dean Hole (John N. May). White, flushed beautifully with delicate pink. Japanese, immense in size and exquisite in form. A very promising variety.

Miss Louise D. Black (E. G. Hill & Co.). An improvement on Mrs. L. C. Madeira. In color it is a deep rich yellow, and it has stout erect stems.

Gold Fever (E. G. Hill & Co.). What a name! This is also of the Madeira type. The flowers, however, are larger than are those of that well known variety.

Henry G. Rieman (E. G. Hill & Co.). This is also a rich shade of yellow. In form similar to the white variety Mrs. Robert Craig, but it is very much larger. This should take rank in the very first class.

Mrs. Edward H. Trotter (Robert G. Carey). Pure white, of great solidity; a well built flower on stout and erect stems. Reflexed Japanese in type. This looks as though it ought to be a first-class commercial variety.

Oakshade (Robert G. Carey). So named after the summer residence of Thos. C. Price, Esq., Chestnut Hill, where it originated. In form it is very distinct and beautiful. Its petals or florets are quite peculiar—resembling somewhat the floret of a salvia. Its color is hardly likely to become popular, I am afraid, as it is of a dull purple shade.

Miss Margaret Newbold (Robert G. Carey). In color it is a very delicate pink. Incurved Japanese, somewhat resembling Mermaid, but it is of a much better color.

Philadelphia, and the one under number exhibited by Thos. H. Spaulding in com-

petition for the Blanc Prize, were also awarded certificates by the committee appointed under the auspices of the C. S. A. E. L.

CHICAGO.

But three seedlings were submitted to the Chicago committee of the Chrysanthemum Society of America November 17. Of these, two seedlings sent by F. Dorner & Son, Lafayette, Ind., were recommended for certificates. No. 14 was an incurved of a peculiar type, difficult to describe. The florets were tubular with an open flare at the ends, inside a pink terra cotta, with light reverse. The flower presented varying color effects under differing exposures to light. Its main value will probably be as an exhibition flower. The flowers shown averaged 6½ inches in diameter. No. 25 was a reflexed flower of considerable depth—diameter 5 inches, depth 4½ inches—white streaked and shaded with amaranth.

Juno was the name of a variety sent by N. Smith & Son, Adrian, Mich. It was a massive high built bloom, incurved, petals canoe shaped, pink inside, buff reverse. Owing to the shape of the petals and flower the buff was the only color seen except on close examination.

In addition to the above Messrs. Dorner & Son sent blooms of a number of other seedlings for the opinion of the judges only, there being an insufficient number of blooms of each to enable them to make a regular entry. These all seemed meritorious. No. 1 was a large, high-built pink, and on the stem was a leaf that was worthy of note; it measured 8¾ inches long by 5½ inches wide. No. 5 was a large, fine, incurved yellow; No. 8 a high built yellow; No. 20 a large bronze and terra cotta reflexed; No. 21 a large flat pink, petals tubular with incurving tips.

Chrysanthemums for General Use.

"Buckeye Boy" wants to know "the best method from start to finish to grow bush and standard plants." Admitting that the instructions which have appeared in your columns about "mums" can't be beaten for those wanting to grow fine flowers on a bench "B. B." very properly says that the small retail florist has to grow them with several objects in view, viz: First for cut flowers; second, pot plants; third, to propagate them for spring sales and fourth for decorations for store openings, social events, etc.

I am going to tell "Buckeye Boy" how he can grow cheaply fine bush plants which with plenty of disbudding will produce him fine flowers if he has to cut them; it will give him the most salable kind of a plant for any purpose. The method I adopted a few years ago of growing chrysanthemum plants quickly I learnt from Mr. W. K. Harris and Robert Craig. It is not the rule for my neighbors to grow them in this way, on the principle I suppose that "a prophet is not without honor save in his own country." As soon as the plants are out of flower either cut on the benches or from pots, the plants, if grown on the benches, are lifted and planted in flats in their sorts, and kept as cool as possible without freezing until February. By that time they will begin to make a growth. You cannot propagate the whole crop at once, so you must begin in February to take off cuttings that are sufficiently large and strong enough to make good plants. With large chrysanthemum growers it is almost a continual propagation

from February till August. The plants you want for your pot plants should be put in the sand the end of April. By the middle or end of June they will be thrifty growing plants in 3-inch pots, and once stopped. By the 20th of June I like to have them planted on the benches in about 5 inches of soil. Sometimes I have used a carnation bench, where the carnations had been thrown out, adding to the old soil a little well rotted manure and a sprinkling of bone dust, but really the soil is not of great consequence for this purpose, as long as it is light and easily handled. I plant 15 inches apart each way. From the time of planting until they are lifted they should be stopped or pinched twice. You will have had the chance to keep them watered, syringed and fumigated, and by September 1 they will be bushy thrifty plants. Now here comes in the difference between bench grown plants and those planted out of doors; the roots of the former are not spread over all creation. A fork put well under them will lift them without the loss of scarcely a working fibre. Mr. Wood thought about the 20th of August was a better date than September 1 for lifting, but from even this year's experience I must stick to my date, September 1, or thereabouts. Have arrangements made so that the plants can be potted at once into 5, 6, 7, or 8-inch pots just as soon as lifted. If possible give them a slight shade for a few days and a dusting of water 2 or 3 times a day. In a week the plants will have hold of the new soil and then will stand a light house, and by degrees more air. Do not let them be outside under any consideration if you can possibly help it. Plants that you lift in September will more than double in size before you sell them, so be prepared to stand them over and space them every week or two. If you follow out this rule your plants won't lose a leaf and your flowers will be as perfect as if grown to a single stem, although of course if you are going to have a dozen flowers from a 6-inch pot plant they won't be exhibition flowers.

The business of tying must be attended to as soon as lifted, but that will largely depend on varieties. Some stiff branching varieties like W. H. Lincoln will do with a single stake in the center with the side branches supported by a fine thread. Smilax thread is a first rate tying material. Others like Ivory, which is the ideal pot plant at least in its color, will require 4 or 5 slender stakes to keep its flowers from crowding, and the plant from having an inclination one way or the other.

About disbudding; that will largely depend on your trade. Where a good price is paid for a plant, say \$1.50 for a 6-inch pot, it pays to leave only one flower on each shoot. If you want sprays then pinch out the crown bud and leave the three side buds, but never let any of them go without some system of disbudding. As the enquirer wanted to know the whole treatment I may add that chrysanthemums are the easiest things to root in winter, but after April they hang fire a little. They can be rooted freely any month in the year, but there are two conditions which must be religiously observed: Never let the cuttings wilt in the sand and, which is the same thing, keep them saturated until they are rooted.

Although I have grown good standard chrysanthemums I won't pretend to be an authority on them. The principal points are, select strong healthy cuttings in January. When rooted pot into 2½-inch pots; before they become too much root bound in that, shift into a

4-inch and from a 4 into a 6 and from the latter into the pot which they are to flower in, a 10 or 12-inch. Keep them growing without a check of any sort until they are the desired height 4, 5, or 6 feet. Keep all lateral shoots pinched off till they have grown to the height you want them; then stop them and let half a dozen of the lateral shoots grow, but they must be all near the top. There are several ways of training a standard. I like best a stout stake not less than one inch in diameter, through which you can bore holes ¼ of an inch and run through a stout stiff wire, which can be bent in umbrella shape, you can run one-half a dozen such wires within a few inches of the top of the stake. Smaller wires can be run at any convenient distance from the heavier wires from the outer edge up to near the stake. As the lateral branches grow they can be tied down to the wires and when they have grown to the full width of your wire frame should be pinched, and from these branches will spring laterals that will give you the flowers. A well grown standard should not have its flowers all looking up perfectly perpendicular but they should all be looking out from the center. I can tell "Buckeye Boy" that growing standards is an expensive affair, and they are most difficult to handle after they are grown, a few may be a drawing card for your own private show, but after all they are something like the tricks of a trained animal, their beauty lies principally in the contemplation of how long and difficult it was to make them so more than any beauty or pleasure you can see in them themselves.

I am going to finish up this unintentionally long article by giving you a list of a dozen or so of the best varieties of chrysanthemums for growing as bush plants, as described above. The varieties are chosen entirely from my own experience. A few are new varieties that I have tested this year and some are old varieties that have been entirely discarded for bench growing for fine flowers, yet they possess all the characteristics desirable in a pot plant. Here they are:

Ivory,	Joseph H. White,
Mrs. Whildin,	W. H. Lincoln,
Etoile de Lyon,	Maud Dean,
Pitcher & Manda,	L. Canning,
Bayard Cutting,	Challenge,
Wm. Falconer,	Dorothy Toler,
Mrs. W. K. Vanderbilt,	Hicks Arnold,
Minnie Wanamaker,	L. Boehmer.

This brief list embraces but a meagre few of the hundreds of fine varieties, yet they are just what is wanted for a good bush plant, free flowering, short jointed, healthy, and mostly dwarf varieties.

WM. SCOTT.

Chrysanthemum Richard Dean.

I notice in the report of the Chicago show this variety was described as a beautiful shade of pink. Mr. T. H. Spaulding distributed this variety in this country and describes it in his catalogue, page 19, as a deep crimson, golden reverse. This agrees with Mr. Robert Owens' description, who controlled the stock. With us it is a chestnut red with bronzy reverse and shows a center, being of no value for American trade. Not having seen the blooms exhibited, am unable to give the name of the pink one, but with us Louise, by Calvat, 1892, is the best commercial variety we imported last spring. It is very light pink, much the same in color as Pres. Wm. R. Smith, but not as bright in the depths. Habit dwarf, short jointed, with short stout

ONE OF MR. GROVE P. RAWSON'S CHRYSANTHEMUM HOUSES, ELMIRA, N. Y.

stem. I also notice that in the opinion of the judges Mrs. L. C. Madeira has been superseded. As we did not purchase a complete list of novelties last spring, I beg to ask by what variety it has been superseded? As far as I know this incurring Chinese is distinct and of value for exhibition in this class, although not a commercial variety. ELMER D. SMITH.

[In the recently published list of O. de Meulenaere we find the following: "M. Richard Dean (Calvat, 1893). Delicate rose with a tinge of yellow, ends of petals crimped and fringed. Richard Dean (Owen, 1893). Deep crimson, reverse gold, long petals."—ED.]

Three Dozen Good Chrysanthemums.

The question from "H. C. M." who wants a list of 12 good early chrysanthemums, 12 mid-season and 12 of the best late sorts is referred to me. It is a little difficult to classify many of the varieties as early or mid-season. In some localities, and more particularly under different treatment, sorts that with some growers are really early are with others only what can be called mid-season. Some good authorities may criticise my arrangement but it is near enough and will give you flowers from October 15 till Christmas. I have put Minnie Wanamaker in the midseason list, and it belongs there, but this still unsurpassed grand white will keep in good useful condition till the middle of December, and I have kept it till the 27th of December.

I haven't chosen the varieties because they make grand exhibition flowers, although most of them will do that, but because they are all good healthy growers of distinct colors, and can be depended on

to give you uniformly fine flowers and hold up their heads, a very important point in the modern chrysanthemum. There are several varieties that are good for pots not named in the list, as "H. C. M." did not I believe ask for that information.

TWELVE EARLY.

Yellow Queen, best early yellow.
 Marion Henderson, yellow.
 Mrs. J. G. Whildin, yellow.
 Mrs. John Gardiner, deep yellow.
 Ivory, white.
 Mrs. Bergman, very early white.
 Marie Louise, white.
 Jessica, white.
 Mrs. E. G. Hill, pink.
 Vivian-Morel, pink.
 Lady Playfair, pink.
 Mrs. A. J. Drexel, crimson lake.

A LARGE DOZEN FOR MID SEASON, BUT ALL GRAND.

The Queen, purest white.
 Niveus, grand white.
 Minnie Wanamaker, white.
 Mrs. Bullock, white.
 Mutual Friend, white.
 Eugene Dailedouze, grand golden yellow.
 Harry Sunderbruch, very large yellow.
 Mrs. Craige Lippincott, yellow.
 Ermenilda, pink.
 Pres. W. R. Smith, pink.
 Mrs. Potter Palmer, pink.
 Maud Dean, fine habit, pink.
 Inter-Ocean, beautiful flower, pearly white.
 Col. W. B. Smith, golden bronze.
 Hicks Arnold, most useful bronze.
 Margaret Jeffords, large bronze.

TWELVE LATE.

Mrs. J. G. IIs, white.

Mrs. R. Craig, fine incurved white, as beautiful a flower as Ivory.

Mrs. Jerome Jones, white.

Ed. Hatch, almost white.

W. H. Lincoln, rich yellow.

Mrs. F. L. Ames, deep yellow and very large.

E. G. Hill, deep yellow, and will keep till New Year's.

Harry Balsley, grand pink.

V. H. Hallock, pink.

Roslyn, pink.

Laredo, pink.

Challenge, dwarf, can be grown on side bench and make a splendid bush plant, fine yellow.

Now there are dozens, yes, hundreds, besides these worth growing, but if you grow all of the above and grow them well there will be little to regret.

WM. SCOTT.

Chrysanthemum Wanlass.

We are advised by Mr. T. D. Hatfield that the correct spelling of this name is "Wanlass" and not "Wanless" as given in the catalogues. Mr. Hatfield writes that in England "Wanlass" is a north country name for "Fairy," or the "lass that carries the wand."

We have received from Messrs. Cole Bros., Peoria, Ill., a photograph of a chrysanthemum grown on a wire frame in the form of a bicycle. It must have required a great deal of work and care to accomplish the result. As an example of ingenuity it may have some value, but it certainly was not beautiful.

A chrysanthemum and baby show is a combination evolved by a giant intellect in a small western town.

Carnation Notes.

Many growers are of the opinion that cuttings rooted in April or May make much better plants than those rooted earlier. They do not like a large plant in the fall, believing that a small one transplants better and makes finer flowers. This is often the case, but the trouble starts when the plant is young. Cuttings can be rooted in January with impunity and with such sorts as McGowan the best of results will be obtained providing the plant is kept growing right along without a check. I do not believe that a young plant should ever be potted, as it is apt to become potbound, which gives it a check from which it will not, as a rule, recover unless the season outside is unusually favorable.

My method when propagating for my own inside planting is to take the cuttings from flowering stems in January or February, rooting them in four inches of clean sharp sand with little or no bottom heat. I do not believe in propagating benches with the sides all boarded to the bottom, thus confining the heat under the bench; this I think makes the cuttings weak and it certainly does not make them take root any quicker, for without heat we have no difficulty in rooting most varieties in three weeks; as soon as rooted they are planted on a bench in a loose, moderately rich loam that is two inches deep. When the plants begin to crowd each other they are transplanted a little farther apart. This is not as long an operation as repotting which must be done before the plant is potbound or as I stated before, a check follows.

Now, my reason for benching in preference to potting is that when the latter method is used unless the ball is well broken before planting outside it remains in that condition all summer, and should a drouth prevail for any length of time the plant will not do as well as if taken from a bench. It is true that during a wet season the plant will make a great quantity of roots, but when it is lifted in the fall the ball will as a rule be found in the same condition as when planted outside. Now comes the rub. It is almost impossible to get the soil in the bench in the same condition or state as that old ball, and as all of the new roots center in the ball it is necessary for the welfare of the plant for all of the root part to be moistened equally, which can not be when the ball is there for if we pack the new soil to make it as hard as the ball naturally becomes during the summer, the roots starting after planting inside will have very hard work to make any headway. This matter can easily be tested by every grower, simply by trying both methods. I was more than ever convinced that my theory is correct when I visited a grower who tried both plans the past summer. The plants he had started in a bench were as fine as any I had ever seen and those grown in pots after planting inside were losing all of their leaves up to where the new growth commenced. This was November 1.

These remarks do not apply so much to the growers who lift a large ball with the plant in the fall which (as I have stated

previously) I do not approve of, but to those who shake off most of the soil.

CHARLES H. ALLEN.

Carnations at the Phila. Show.

The display of carnations was much larger and finer than in previous years and was quite a feature of the show.

The Chester County Carnation Society made an excellent exhibit of standard sorts. Their flowers seemed well grown and kept well. From Chester County there were a number of seedlings, almost all the growers contributing from one to a dozen. Ed. Swayne had quite a vase of *Opheia* which is similar to *Sweetbrier* but a few shades darker. Mr. Chas. Starr had a fine vase of *Lois J. Haettel* and some seedlings. Isaac A. Passmore had a fine striped one resembling *Helen Keller* but with more color, and a promising scarlet. W. R. Shel mire a host of *Cæsar* seedlings and a number of new named ones—*Eulalia*, a deeply striped one making almost a pink by artificial light, seems good; *Edelweiss* is a yellow of good promise; *Kitty Clover* resembles *Helen Keller* and looks like a good sort.

Hugh Graham made a fine display of *Adelaide Kresken*, *Mme. Diaz Albertini* and standard sorts. *Crimson Coronet* looked well in this exhibit and Wm. Scott and *Helen Keller* added laurels to themselves.

Mr. H. E. Chitty exhibited his new ones—*Alaska*, *Corsair* and *Magnet*, all showing up well.

Myers & Santman had a vase of their new one, *Della Fox*. This looks like a decidedly good thing of the *Daybreak* type.

John N. May showed some fine seedlings—*Maud Dean*, resembling the old *Dawn* but much larger and better in every way, attracted quite a bit of attention. *Dean Hole* seems a promising yellow and *Lena Saling* a good deep pink.

Bouton d'Or was here in fine shape but with weak stems.

Z. De Forest Ely & Co. had several fine vases, a bunch of *Thomas Cartledge* being especially pretty by artificial light.

A. M. Herr exhibited 100 each of *McGowan*, *Daybreak* and *Wm. Scott*, well grown fine flowers.

Carnation men can congratulate themselves on their showing at this exhibition but it is a pity they had not more light.

A. M. HERR.

Cypripedium Chamberlainianum.

This beautiful species deserves a place in every establishment. When once established it is easily handled and flowers freely, throwing up its long flower scapes and continuing to bloom for months, each flower lasting long in perfection. It is entirely distinct from any other species and will at once arrest attention among a collection. Its medium sized pea green dorsal sepal is margined deep yellow with rich suffusion of brown at the base, and dark brown longitudinal lines extending to the margin. The petals are about two inches long twisted like a corkscrew, green densely barred with rich brown, beautifully undulated and with ciliated margins; staminode brown, tinged green at the

lower end; the pouch two inches long of rich magenta, densely spotted brown, having rich yellow margin; leaves light green, long and broad, faintly tessellated. It likes a warm moist atmosphere well up to the light, but slightly shaded from direct sunshine.

WM. ROBINSON.

North Easton, Mass.

Dendrobium Phalænopsis Schroderianum.

Fortunately this beautiful dendrobe (of so recent introduction) has proved so useful, showy and valuable an orchid for the florist and decorator that it is destined to become as popular as *D. nobile*, and in fact will be used even more extensively when better known. It blooms during the fall and winter in great profusion from the apex of the pseudo-bulbs and twenty to twenty-five blooms is not unusual on a stem. Considerable variation of color is prevalent, some being rich dark warm purple, others being pure white; the predominating color, however, is a delicate lilac tint. During its period of growth, which is in the summer, it should occupy a very light position with abundance of water, avoiding full sunlight. The hottest end of a palm house has been found to grow it with excellent results; one of the finest batches in cultivation is treated in this way at Wyndmoor, Chestnut Hill, Pa., in Mr. E. Lonsdale's establishment; the moisture-laden atmosphere caused by copious syringing of the palms, together with the warm summer heat, has produced finer bulbs than has ever been seen on imported specimens.

Baskets and pans are best, the latter being preferable as they do not dry out so rapidly during growth. About equal portions of good fibrous peat and sphagnum moss should be used. The flowers remain four and five weeks in good condition, and unlike many of its congeners it possesses a useful long stem, which can be utilized without cutting away a particle of the bulb; in shape the flowers resemble a *phalænopsis*, hence its name.

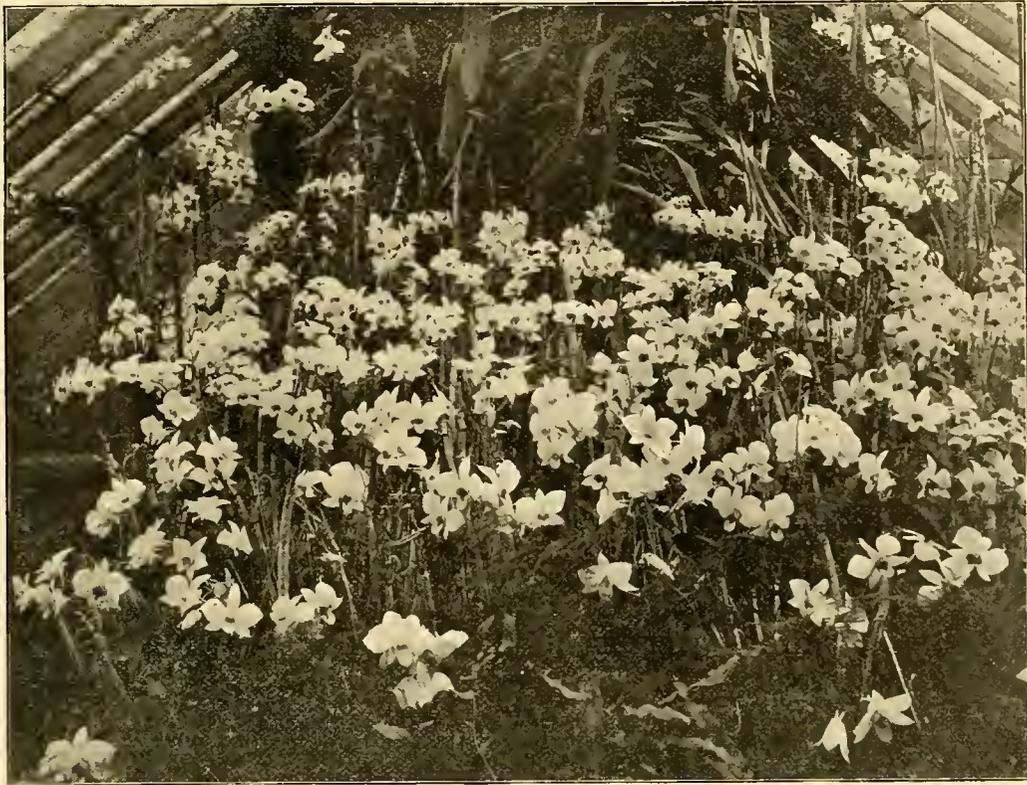

A. DIMMOCK.

New York.

Chrysanthemums, while still available in abundance, are less a factor in the market than they were one week ago, and roses, carnations and violets will presently resume their position of prominence temporarily vacated in favor of the chrysanthemum. Violets especially felt the extra demand occasioned by the horse show last week and are not likely to remain long at the high figure recently reached. The drop in price has been retarded somewhat, however, by the very cold weather with which the current week begins. Otherwise there is little or no change in the market here since last report. Trade is not generally good, only here and there a show of good business.

First-class Beauties are still selling above everything else in the rose line. Carnations are "taking a move on," particularly the good varieties; although the price has not advanced yet general returns are slightly better. *Smilax* has been selling well for the past two weeks, ahead of last year, but there is not as much of it grown this season. *Lily of the valley* has been over plentiful the past few days.

Ernst Asmus has some new carnation houses built upon the same plan as the latest addition to the F. R. Pierson Co.'s establishment, i. e., with the sash bars resting on a light angle iron in front, the usual heavy wooden plate being dispensed

GROUP OF DENDROBIUM PHALÆNOPSIS SCHRODERIANUM

with. Mr. Asmus is in doubt as to the value of such a construction for carnation growing, as it is impracticable to give front ventilation. For Meteor or any other crop requiring high temperature this consideration would not have so much weight. The best dark red carnation with Mr. Asmus is Pomona, which has a neat stocky habit and blooms well. Jacqueminot as elsewhere has had to go on account of the rust. Salmon Queen formerly a favorite variety here is run out, and its place is more than filled by Scott and Daybreak.

Among the more recently introduced variegated foliage plants Pitcher & Manda report a special demand for Stenandrium Lindenii, Tradescantia reginæ, Strobilanthes Dyerianus, Curmeria Leopoldi and Dichorizandra Mosæca, Aglaonema picta, not new but scarce, also sells rapidly since it was shown at the exhibition in Atlantic City.

J. W. Mortimer of 2222 Third avenue has opened a branch store at 40 South Fourth avenue, Mt. Vernon.

Philadelphia.

There are a great many "mums" about as yet, but the rush seems to be over, and from this time on the stock will begin to decrease. Ivory has been nearly all cut out as also has Whilldin, Niveus, Queen, Jessica and others. Those most plentiful now are Dailedouze, M. Wanamaker, Cullingfordii, Lincoln, Ada Spaulding, Roslyn and small lots of many other varieties. Mr. Heacock had a few very fine Mrs. M. Thomas and Mrs. Jerome Jones, both good varieties. Dailedouze has shown up very well this year, but is now developing a very weak stem and the same may be said of nearly all varieties in general and H. Balsley in particular, which latter kind is almost unsaleable on account of its weak stem. It is a

pretty good dozen now that commands \$1.50, and for \$2 they must be very fine.

Mr. Harris has a house full of the new variety Mrs. H. H. Battles, this is like Ivory somewhat with a pink tinge such as is seen on Ivory towards the last of the crop, it is a very pretty thing and takes the place of Ivory, which is now gone. Mr. Harris' house of this variety is a sight, it being almost flower against flower, blooming as it does so profusely. Mr. Battles has used a great many of this variety, making it a leader, 200 per day has been his quota for some time past. At the launch of the St. Louis some 500 of this kind were used and was much admired. Mrs. Robert Crawford is another very pretty white raised by Mr. Harris, this looks like a good commercial flower. Another white beauty of last year is named in honor of Mrs. Thomas Cartledge; this is a gem but not in yet, it being very late. Another very excellent variety is to be called Mrs. George Craig but for some reason or other Mr. Harris has not christened it as yet.

American Beauties have jumped to \$25 per hundred for first choice and some selected teas now bring \$5 and \$6. The majority, however, are still at the old figures, \$2 per hundred for Perles, Gontiers and Mme. Cusins, and 3 to 4 for the largest teas. The quality of all varieties is improving. Testout is fast becoming a favorite and seems to be selected in preference to La France.

Carnations are inclined to stiffen up a little, \$1.25 to \$1.50 being asked for extra flowers while very good ones can still be had in quantity for \$1. This is the price to the stores, the fakirs get what they want almost for the asking; they are sold on the street for from 5 cents per dozen up to two dozen for 25 cents, when the commission and expenses are paid on these lots, what remains for the grower is scarcely discernable.

The meeting of the Penna. Horticultural Society last Tuesday evening will long be remembered by those present; it opened at the usual hour 8 o'clock, but it was 11:30 before Mr. Craig declared the meeting adjourned. The greatest interest centered in the report of the committee representing the capitalists or those who are advancing the money to build the new hall. The lease of the building or ground contained clauses which appeared to shut the society out of any revenue, no matter what the receipts might be, and the society was also asked to pay half the salary of the employes of the new building. This was too much and created no end of discussion. There was a very large attendance and everyone present seemed greatly interested. The committee having in charge the dividing the work of the society into sections made a complete and very favorable report. Every month there is to be a report and paper read by a certain section, illustrating its objects. This plan will certainly add new life to the work of the society and greatly increase the interest in its meetings.

The bondholders reported subscriptions to the amount of \$130,000, and prospects of getting the balance to make up the requisite \$200,000. A letter from Miss Schaffer, who with her brother endowed the society, was read. In it she expressed a wish that the new building should not be erected, but the lot be sold and the proceeds be invested with the exception of some \$50,000 to be used in erecting a library and meeting room. This caused great surprise and after considerable discussion it was decided that the plan had gone too far and the hall should be erected as projected.

When the meeting adjourned the majority of the members were in a very confused state of mind and it looks as if it

would take a special meeting to straighten matters out.

The Phila. Growers' Cut Flower Market, about which so much whispering has been going on for the past two or three months, has it seems begun to raise its voice a little. In this city the greatest secrecy has been observed and everybody approached has been especially enjoined not to say a word about it for fear, well for fear of something, but nobody knows what that something is. Now, however, word comes that from the Chester Co. hill tops the whole matter is blazoned forth so that all who have ears can hear and there is no more secrecy anywhere.

It seems there is to be an exchange for the sale of cutflowers and combined with this a place where all growers and dealers in such stock could purchase supplies at wholesale rates. \$25,000 is to be the capital stock, consisting of 1000 shares at \$25 each, 20 per cent. of which is to be paid at time of subscribing and the balance in monthly installments. The flowers are to be sold on a 10 per cent. commission and only members can enjoy the selling privileges of the exchange. All stock sold is to be graded and each grade thrown together, each grower to receive credit for pro rata share of stock sold each day. A building near the City Hall is to be engaged as soon as three-fourths of the growers, we presume about or in Philadelphia, agree to do their business through the exchange. The building is to be fitted with the latest appliances, for handling and keeping cut flowers and telephone connection made with prominent growers. The scheme is a good one in many respects, but something much simpler should have been organized by the growers of this city at least eight years ago. It could have been done then much easier than it can now, and the results would have been more than satisfactory. K.

Baltimore.

Although the chrysanthemum show was crowded by night, the attendance during the day time was not as great as in previous years, so the committee who had charge are rather downcast. Any one who knows the difficulties under which they labored can be depended on for a word of praise to them even though the net returns may be very much more behind the last years show than has been predicted. It was a grand show in many respects, and that it was surprisingly successful is due first of all to the committee, second to the members of the club who stuck to the work and brought out the best they had and entered it, whether that best was superior to last year's products or not. There was another committee that deserves a word of commendation. It was appointed to collect, pack, and ship the flowers intended for entry in the Philadelphia show, but could not do it as the blooms sent by members were not nearly open enough to stand any chance in the contest.

A number of entries not for competition received a vote of thanks from the club; Hugh Graham of Philadelphia for his beautiful vase of "Philadelphia"; Messrs. Pitcher & Manda, Short Hills, N. J., collection of new varieties; John Burton, Philadelphia, vase of American Belle rose; Mrs. M. J. Thomas, group of palms; Messrs. Chas. Hamilton, F. W. Wood, Geo. Lotze, C. Hess, various deserving displays, and Charles Feast for a charming piece of music called "The Pretty Chrysanthemum," composed by him and dedicated to the club.

Notwithstanding the hard times there is talk of more stores being started, and notwithstanding the crowd of gardeners hereabouts, another arrived a short time ago and was received with open arms. He is staying with Mr. P. B. Welsh and not a soul has said a word to Philip against his taking in a young man without any experience whatever. MACK.

Cincinnati.

The show in the Jabez Elliott market was free, but the growers are all more than pleased with this week's work, and the display was a grand success. On Wednesday, Thursday and Friday the sales were only about equal to the regular markets, but on Saturday the people commenced to open their hearts and pocketbooks.

Fred S. Walz showed a handsome vase of Mrs. Potter Palmer and Golden Wedding, with pot "mums" for a background, and above the stand was the American eagle done in yellow "mums." G. Brunner's Sons showed pot plants well grown and some fair exhibition "mums," with a few choice American Beauties and carnations. R. Witterstaetter put up a fine display of choice cut blooms consisting of Golden Wedding, 9 inches in diameter; Nellie Bly, Kioto, Dailedouze, Marie Louise, Major Bonaffon, Harry Balsley and W. R. Smith. A few pot plants of "mums," cut carnations, marguerites and violets were also displayed.

Corbett & Wilson made a good show of general market plants and some very good cut blooms. R. J. Murphy displayed cut blooms of "mums" and carnations only. B. J. Glens made a fine display of market plants and cut blooms of "mums," carnation and roses. E. Mauthy showed pot plants principally with some cut blooms; H. Corbett pot plants of "mums" and good cut blooms. Wm. Bolia displayed cycas, palms, bouvardia, carnations and a magnificent vase of "mums," Rosalind. John Fries showed some well grown pot "mums." Kioto seemed to attract the most attention. Thomas Jackson showed pot plants of "mums," carnations and geraniums. Joseph Linfoot's stand was very attractive, backed with pot plants, flowers and designs in front. Jules Schuman's display of pot plants attracted much attention; they were well grown; he also made a creditable show of cut blooms, T. J. Conger showed plants and flowers. B. P. Critchell made a good display of decorative palms and cut "mums." C. C. Murphy showed carnations and cut "mums."

The Hoffmeister Floral Co. had a very complete display of market stock, especially roses, cut "mums," carnations and pot plants. Wm. Underwood showed pot plants, cut flowers, etc. T. Caldwell had some well grown plants and made a good show of cut blooms. Henry Schwarz showed some well grown pot plants. Wm. Murphy made a fine display of carnations. E. Mack showed pot plants and cut flowers. H. Bertrand showed a fine collection of pot "mums." Reutenshow Bros. showed small market plants only. G. Adrian showed pot "mums," cut blooms and violets. Ed. Fries had some choice pot "mums" of the best kinds. J. G. Finn showed some fine pot grown "mums," as well as cut blooms. C. Burtschy & Bro. made a very handsome showing with pot "mums," palms and cut flowers. Margie & George presented a varied and complete collection of cut market stock. Chas. Pfeiffer showed some exhibition plants of Ivory, Childs, Queen, H. L. Sun-

derbruch, etc.; they were well done and attracted a vast amount of attention. K. Wolfe probably had the best display of decorative palms and ferns. J. Siefreid showed pot plants of "mums" only. J. J. Gest, pot plants of "mums" and cut blooms. R. Schmidt made a fine exhibit of pot plants, consisting of "mums," palms, etc. Louis Pfeiffer made a grand showing with cut blooms. Philip Papp showed a choice collection of pot grown "mums." Frank Huntsman showed some fine pot "mums" and cut blooms. W. J. Gray showed only cut blooms.

Taking into consideration that none of the flowers displayed at this show were grown for exhibition purposes it is doubtful if there is a city in this country that could bring together as fine a collection of market stock. The show was a credit to the growers, and reflects much credit upon the managers, Messrs. George, Linfoot and Conger, who have worked hard to make it a success. The retail stores are inclined to find fault, claiming that the privilege of selling in the market has been very detrimental to their business, but we trust they will find they have been mistaken, as a show always has its good effects, and the stores will be rewarded later.

Laurence Egbert and H. S. Grumberg of Chicago have fitted up a store at 309 Race street, called "Queen City Flower Store," and are now ready for business.

Rudolph Lodder and sister, and Frank Pentland were visitors this week. G.

Boston.

Roses are coming to the market in quality greatly improved, the wintry weather however unacceptable otherwise being just what is wanted to bring the roses to their best condition. American Beauty leads as usual, and the local supply is at no time equal to the demand, some of the large dealers receiving daily shipments of this favorite variety from New York. Other roses grown abundantly for the New York market but seldom seen here are Mme. Cusin and Mme. de Watteville. Both these roses are grown to perfection at Waban Conservatories but few other rose growers touch them. S. J. Reuter is sending some fine Wattevilles from Westerly, R. I.

Carnations sell well, and are unsurpassed in quality. No one should express an opinion as to Mrs. Fisher until seeing the way this variety is coming on to Welsh Bros. from Coolidge Bros. of South Sudbury. Nothing handsomer in the line of white carnations can be wished for. The best selling varieties, that is those that bring the highest individual price are Daybreak and Wm. Scott. It may be added in regard to both these varieties that no rubbish has appeared yet under their names, the stock being uniformly good wherever seen.

Chrysanthemums are still with us but in reduced quantity and much of the stock has the appearance of being past its prime. Varieties decorously incurved in their time are hardly recognizable, flaring wide open and apparently trying to get into the reflexed class. Altogether the trade is pretty well tired of them regardless of class and when they have taken a final departure no tears will be shed.

Roman hyacinths and paper white narcissus are now in the market but selling slowly as yet. Violets are of fine quality and improving daily. Growers are in no hurry to pick them and there seems no disposition to overcrowd the market with them.

At the exhibition in Horticultural

Hall on Saturday, November 17, the great center of attraction was a glass case in which were displayed three cypripediums in bloom from the conservatories of Mrs. F. L. Ames. One of these was a vigorous plant of that rarest and loveliest of all cypripeds, *C. insignis* Sandera, bearing three blooms. Mr. Robinson's heart was made glad by the award of the Society's gold medal to this plant. The other two exhibits were hybrids raised by Mr. Robinson at the Ames Greenhouses, one *ciliolare* × *Lawrenceana*, the other *insigne* × *Boxalli*, both very handsome; a certificate of merit was awarded them. New chrysanthemums were shown as follows: From Elmer D. Smith, Adrian, Mich., Durango, bronze and yellow, and Sinaloa, a pinkish white tightly incurved. From H. F. Spaulding, Miss G. Spaulding, white incurved and from Norris F. Comley a seedling which was highly commended last season and has now been awarded the Society's certificate of merit. It is a pink incurved style of Eda Prass but deeper colored and a better grower. E. S. Converse showed Gros Colman and Black Alicante grapes. The display of fruits, apples especially was very fine. Wm. Christie called attention to a collection of handsome apples grown in Nova Scotia. Strangers within our gates: Geo. Sykes, representing Hitchings & Co., New York and Benj. Durfee and Hugh Kane of Strauss & Co., Washington, D. C.

Chicago.

The trade is assuming once more a normal aspect. Although chrysanthemums are as yet quite abundant these have ceased to be a factor in depressing prices on other stock in general. True, the prices of roses have not advanced to any marked degree, still there isn't that amount of slaughtering of good stock which was practiced during the brief reign of the "mums." Shipping trade was fairly active the past week, a fact which materially assisted in cleaning up the daily receipts which at no time were very heavy.

In local retail circles trade was extremely quiet, the demand in this line being active only in Beauties and violets, the latter in particular being very scarce. The supply of violets has been fluctuating from the extreme of oversupply one week to great scarcity the next. In quality conditions are just as far apart. Some of the stock is very good indeed, while the remainder is of little account. In Beauties the supply and quality are uniform, more so than in any other rose section, the largest portion of the best and long stemmed stock being absorbed by the local trade at prices ranging from \$2 to \$3 per dozen. Testouts are fine; this variety is becoming quite popular, and demand is constantly growing. The same holds true as regards Bridesmaid. Brides are good in spots, some being extra fine, while other lots are of indifferent quality. In Meteors considerable culling has to be done, as many blooms are decidedly off color. There is little demand for Perles and Gontiers.

Carnations are very good, the supply in most sorts being about equal to demand, with the latter increasing daily. Harrisii and callas are in, the former meeting a fairly brisk demand, while the latter move slowly. There is a brisk demand for orchids (cattleyas), which is mainly supplied from out of town points.

No advance price lists for Thanksgiving Day have come to hand. Wholesale men as a rule are very conservative, and to judge by the tenor of their remarks regarding the aspects of trade at present,

there is small likelihood of advancing prices to any marked degree. The expected supply for any holiday has always been such an uncertain quantity that any figures based on "estimates" of supply and demand have nearly always been so wide of the mark that wholesale men have about made up their minds to stop guessing, so things will probably take their own course.

Dean Reynolds Hole arrived in Chicago November 21, going from here to White-water and Milwaukee. He will deliver one public lecture in Chicago next week.

At the meeting of the Florist Club last Thursday evening there was some discussion on cannas, and as a result Mr. F. Kanst will read a paper on cannas at the next meeting. The cost of producing good 4-inch geraniums was also discussed, and it was agreed that first-class plants could not be profitably grown at less than \$8 per 100. After adjournment the bowling club held a meeting and appointed a committee to draft by-laws and to arrange for regular weekly games. The bowlers then repaired to a nearby alley, and the board was decorated with several good scores—among them 223, 216, 213 and 209.

Mr. A. Dimmock was a recent visitor.

Toronto.

Entries for the chrysanthemum show have come along in great style and with favorable weather there will be a bigger show than we have had here yet. The show of cut flowers will be very large and there will be no trouble in getting them to the hall, but with cold weather there is a difficulty in bringing large plants. Hugh Graham, of Philadelphia, Nathan Smith & Son, Adrian, Mich., Wm. Scott, Buffalo, Pitcher & Manda, Short Hills and others are amongst the American exhibitors. E.

ENGLEWOOD, N. J.—Patrick H. Morris, florist and nurseryman, died on November 14. The business will be continued by Henry Morris.

TOPEKA, KANS.—A chrysanthemum show was held here under the auspices of one of the churches, most of the florists participating.

ATHENS, GA.—The Ladies' Garden Club held a chrysanthemum show here November 5-8. There was a large display in plants, flowers and vegetables, reflecting great credit on the ladies of the club. J. E. Jackson of Gainesville was the only florist exhibitor.

GALESBURG, ILL.—A chrysanthemum show was given at Pillsbury & Gesler's greenhouses for a local charity, opening November 15. The houses were beautifully arranged, and an elaborate arrangement of electric light added to their attractions in the evening. A corps of young ladies acted as attendants, selling flowers and escorting visitors around.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By sober young florist, good grower of cut flowers and potted plants. Address F. VETTER, 26 Hickory St., Rochester, N. Y.

SITUATION WANTED—By a German florist; 12 years' experience around greenhouses. Good references. Address KANSAS, care Am. Florist.

SITUATION WANTED—By a practical seedman, nurseryman and florist competent to conduct any branch of business. Address O. care Am. Florist.

SITUATION WANTED—As foreman or manager by a first-class rose grower and all-round man; Scotch, married, sober and reliable; good references. Address C M, care American Florist.

SITUATION WANTED—Commercial place in east preferred, by single man; 7 years' experience, and recommendations unexcelled. Address D S, care Geo. A. Sutherland, 67 Bromfield St., Boston.

SITUATION WANTED—As foreman in commercial place, wholesale or retail; thoroughly experienced in roses, carnations, mums, etc., etc. Address by letter only. GEO. BEAL, 2159 N. Diamond St., Phila.

SITUATION WANTED—By a young man of Dutch nationality, in a large flower store, as a design maker. Fully experienced. Good references. Address ROSLIN CONSERVATORIES, South Framlingham, Mass.

SITUATION WANTED—By young florist, nine years' experience in most all branches, sober, reliable and not afraid to work; best of reference; between Allegheny Mts. and Mississippi River preferred. Address GROWER, care American Florist.

SITUATION WANTED—As florist's assistant, by a young woman who has given satisfaction in the arranging of funeral designs and floral decorations. References. In or about Philadelphia preferred. Address H T W, 412 Walnut St., Philadelphia, Pa.

SITUATION WANTED—By florist and gardener, first-class rose, carnation and violet grower, palms and ferns and general stock of greenhouse and outdoor plants; private or commercial; 18 years' experience, age 36, married, no family, English; good references. Address J 67 Madison St., Morristown, N. J.

WANTED—A few strong plants of *Swainsona alba*. VAUGHAN'S SEED STORE, Chicago.

WANTED—Office man and correspondent who is familiar with plant business. Give particulars to J. D. EISELE, Dreer's Nursery, Riverton N. J.

WANTED AT ONCE—Second-hand hot water boiler to heat 1200 square feet glass; also 4-inch pipe. Address W. P. RANSON, Junction City, Kan.

WANTED—Single man, American, rose and carnation grower, for San Antonio, Texas; wages \$25 and board; bring references. Apply VAUGHAN'S SEED STORE, Chicago.

FOR SALE CHEAP—Large second-hand florist's Ice Box, value about \$75. VAUGHAN'S SEED STORE, 88 State Street, Chicago.

FOR SALE—A rare chance; well established florist business in a live Illinois city. No competition. Will sell cheap for cash. For particulars, address T. Z. MAGARRELL, care Tuscola Floral Co., Tuscola, a Illinois.

FOR SALE—Hot air pumping engine, best make, as good as new; will lift water 12 feet and force it 30 feet high, pumping as much as a 10-foot windmill; being perfectly reliable. \$90.00. U. G. LEE, Madison, Ohio.

FOR SALE CHEAP—Greenhouses in a live Illinois town; houses built in 1892; everything in good repair; doing a fine retail business. No competition. This will bear investigation. Address H. D. CALDWELL & Co., Paris, Ill.

WANTED.

Catalogues of wholesale florists, dealers in florists' supplies and wholesale fruit tree dealers.

JOHN A. BALMER, Horticulturist, Pullman, Wash.

GERANIUMS.

The BEST of the BETTER sorts, large stock of the single and double scarlets, all good bedders. Rooted Cuttings:

Labeled \$1.50 per 100; \$12 per 1000. Without Labels. \$1.25 per 100; \$10 per 1000.

Coleus and Alternanthera in season. ALBERT M. HERR, L. B. 496, LANCASTER, PA.

August Rölker & Sons AUCTION ROOMS.

205 Greenwich Street, NEW YORK. Sales every TUESDAY and FRIDAY during November and first half December.

cure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

FROM THE newspaper clippings received we judge that nearly every hamlet in the country had a chrysanthemum show of some sort this year. In most of the smaller places these were held under the auspices of one of the local churches or charitable organizations, and were more nearly church fairs with chrysanthemum displays as a leading feature than regular exhibitions. But this would indicate that the popularity of the Queen of Autumn has extended to every nook and corner of the country and that her hold upon the people is firmer than ever. The anticipated "reaction" has surely not yet arrived.

BULLETIN No. 107 of the North Carolina Experiment Station, Raleigh, is devoted to the subject of "Flowering bulbs in North Carolina and their propagation for florists' use." The bulletin treats specially of the commercial culture of amaryllis, freesias, galtonias, gladiolus, Roman hyacinths, lilies, narcissus, tuberoses and tulips, and includes engravings of the leading bulbs from specimens grown at the station.

THE published statement of the receipts and disbursements of the exhibition at Oswego, N. Y. is as follows: Receipts, \$47.59; disbursements, \$10.08; balance turned over to city hospital, \$37.51. The managers of exhibitions in the larger cities would be very happy if they could keep expenses down to less than one-fourth of the receipts.

THE GRAPE CULTURIST, by A. S. Fuller, first published thirty years ago, has been reissued in a new edition, enlarged up to date. Since its first appearance this has been the standard work on American grapes, and the new edition will no doubt add to its usefulness (Orange Judd Co., New York).

H. J. R.—Your inquiries would require many issues of the FLORIST to answer fully in detail. You will find articles in every issue bearing upon one or more of the subjects you name, and we refer you to them.

CHARLESTON, S. C.—Mr. Samuel Webb died October 16. He had been in the business in this city about 40 years, during which time he always enjoyed the highest regards of its citizens. At the time of his death he had the care of the city parks as well as the majority of the largest private gardens. He had a large nursery at 10 and 12 Friend street, where he did a large business.

BENTON HARBOR, MICH.—A chrysanthemum show and supper was held here by one of the churches. Although the greater part of the exhibit came from amateurs some excellent flowers were shown, and the exhibition was a financial success.

NEWBURYPORT, MASS.—A fine chrysanthemum show was given here by J. J. Comley. In addition to Mr. Comley's display, which formed the greater part of the show, some nice displays were made by various amateurs, for which Mr. Comley offered prizes.

SAVANNAH, GA.—A chrysanthemum show was given here for the benefit of the local orphan asylums. A. C. Oelschig made the largest display; his exhibits were very fine, both plants and cut blooms. Quite an interesting feature was the competition of the school children, to whom Mr. Oelschig gave plants last spring. There were also some amateur exhibits.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

Cucumber Seed.

TO THE AM. FLORIST:—I note in the "Chrysanthemum number" of the AMERICAN FLORIST of the 10th inst. the article referring to 12c. cucumber seeds, and as the statement is misleading and may be construed by the seed trade in general as an indication of existing values in the cucumber seed line I desire to say that no one who makes the growing of the many varieties of cucumber a specialty can possibly sell at any such a ridiculous price without entailing a hard cash loss ranging from \$3 to \$5 per 100 pounds, and although I am personally acquainted with the several different vine seed growers who make the business a specialty in this and other sections I know of no one who would be idiotic to such an extent as to offer seed at any such loss.

The seed you refer to as being offered at 12c. is beyond any question of dispute "tramp seed"—a crop that has been grown by some farmer who, having been unable to dispose of his crop, from one or more of a number of causes, to the specialist to whom he expected to sell the same at the time he planted the crop, now offers the product at any price he can procure for it.

There are a number of lots of cucumber seed of this character in this vicinity that can be obtained at 8c. to 10c. per pound, or even at a less figure if these prices can not be obtained. In some cases the seed has been rejected by the specialists located here for obvious reasons; it may have been improperly cured, possibly injured in one of the different processes through which it has to pass, and again it may have grown in too close proximity to other varieties, rendering the seed unfit for the use of any seedsman who values his reputation. Besides these there are some lots of cucumber seeds that were grown here in 1893 for a certain house that has since retired from the business and to whom the seed referred to was either never delivered, or if ever delivered was returned to the present holders. Under the system of numbering each variety and not naming same, adopted by the house referred to, the present holders of these stocks are absolutely ignorant as to the variety they have; for instance, they may have what is known to them as a white spine, but whether the variety is Early Arlington or Extra Long White Spine they assuredly do not know, and the same condition of uncertainty also applies to the several early and pickling varieties. Any seedsman who has the courage to buy stocks grown and offered under such conditions as above described certainly assumes more risk than my experience teaches me they are willing to take on.

The article as it appears in your issue of the 10th inst. is therefore misleading, for it fails to explain how such an unreasonable price as 12c. per pound for cucumber seed could possibly be made.

Before publishing such articles in your columns it seems to me to be no more than just to the seed trade in general as well as to those who devote their time, energy and money to the growing of any line of specialties, to first ascertain the conditions attached to the matter under consideration for publication before allowing it to appear in your paper.

Write us without delay, stating quantities required, for special low quotations on following plants unequalled in quality and price.

Adiantum Farleyense, Adiantum cuneatum, Nephrolepis exaltata plumosa, Pteris Smithae, Mixed Ferns and Selaginellas in variety, Palms including the beautiful Pritchardia (Licuala) grandis, Dracaenas and Foliage Plants, Araucaria glauca, Pitcher Plants, Ficus elastica, Genistas, Hardy Roses on their own roots, Orchids and Cyripediums, of which we carry the largest stock in the country.

AND A GENERAL LINE OF FLOWER SEEDS, GARDEN TOOLS, ETC.

In this case the wholesale seed trade have mostly made their purchases at prices ranging from 17c. to 25c. per pound. They are obliged to contend with the idea suggested that cucumber seed of a merchantable quality can be obtained at 12c. per pound, which is erroneous and unfair to both the wholesaler and the grower, and injurious to the trade.

Yours truly,

FRANK T. EMERSON.

Waterloo, Neb., Nov. 13, 1894.

[It is a wide open secret that the vine seed crop of 1893 was enormous and that reliable stocks of several leading kinds could be bought as late as April 1894 at 10 and 11 cents per pound in 1,000 pound lots; it would not therefore appear strange that 10,000 lots of a few leaders would still sell as low as 12 cents, notwithstanding any full general line of varieties might cost 17 to 25 cents. The readers of our seed trade column understand these conditions we think.—Ed.]

BOSTON.—Bulb trade has been generally satisfactory this season and stocks were well cleaned up before the hard freeze came on. The thaw and open weather which may be depended upon to intervene before settled winter conditions prevail will undoubtedly give an opportunity to work off the last odds and ends and thus wind up the season in better shape than usual. The sudden and unexpected severe weather caught many market gardeners badly and thousands upon thousands of dollars worth of celery and beets were frozen up all through this section, and especially through Worcester county, where even the potatoes had not been dug. The only complaint one hears in the seed trade is the difficulty in collecting; farmers' accounts are bad, and florists' worse if anything. There are accounts on the books of every dealer which would be sold gladly at 20% on the dollar. The movement on foot in the American Seed Trade Association wherein it is proposed to adopt a uniform discount of 10% to be allowed on all sales of vegetable and flower seeds made and paid for before March 1 does not meet

with much enthusiasm here. Many of the seedsmen think they do not get over 10% per cent for themselves when they get it all, and they do not relish the idea of giving up all the cream to the customer. Auratum lilies from Japan came in at the same time as the native stock. Both are of excellent quality.

IT IS REPORTED that the M. B. Faxon Co. have sold out their seed business at Saugus, Mass., to the J. T. Lovett Co. of Little Silver, N. J.

When writing to any of the advertisers on this page please mention the American Florist.

St. Paul, Minn.

L. L. May & Co. had a chrysanthemum exhibit in their new store on the 10th inst., and A. S. Swanson one in the Washburn building on East 5th street from November 14 to 17. Both displays were very creditable and emphasized the regret that all of our growers have not united their stock and made a grand display. Our florists seem to keep pace with the times in the way of growing mums, as many of the Chicago prize winners have worthy representatives here. The Queen, Major Bonnaffon, Viviani-Morel, Hicks Arnold, Mrs. E. G. Hill, Pitcher & Manda, Marie Louise, Mrs. Gov. Fifer and Pres. W. R. Smith have all been grown here this year, showing fine large blooms, and all will be planted extensively another season. FELIX.

Des Moines, Iowa.

The florists of this city have organized a florists' club, with Peter Lambert for president, J. F. Marshall secretary, and W. L. Morris treasurer. At the last meeting the members voted unanimously in favor of making preparations for a grand chrysanthemum show next fall. A very satisfactory show was given here recently by one of the local churches, at which the florists were asked to assist. W. L. Morris occupied a table with a fine display of big "mums" grown to single stem, and vases of assorted flowers. J. F. Marshall occupied one corner of the hall with a table of cut chrysanthemums, roses and carnations, and a large group of palms, flowering plants, etc. The show was held in Livingston's new seed store, 710-712 Locust street, which Mr. Livingston kindly lent for the purpose.

J. F. MARSHALL.

CHRYSANTHEMUMS.

The following set of eight extra choice varieties will be sent out by us the coming season. They are all of sterling merit, possessing all the qualities constituting a first-class Chrysanthemum for florists' use, having fine, large flowers on good, stiff stems, with foliage well up to the flower.

J. H. TROY, very early white incurving Japanese of fine form, good size and substance, first-class shipper. Ready for cutting October 5th to 9th. Flowers lasted on stems in fine condition six weeks. Certificate National Chrysanthemum Society of America, New York.

J. E. LAGER, very early yellow reflexed Japanese of good size, color and substance. Foliage and stem good; fine shipper. Ready for cutting October 5th to 9th. Flowers lasted on stems in fine condition six weeks. Certificate National Chrysanthemum Society of America, New York.

W. B. DINSMORE, Japanese incurved, golden yellow. Flowers well built and very attractive. Strong stem, with good foliage and great substance. Grand for shipping. One of our best.

MRS. W. A. BRYANT, fine chrome yellow, magnificent flower, mid-season. Broad petals, strong grower. Awarded First Prize at Boston.

F. L. ATKINS, mid-season. Japanese reflexed, large, pearly white flower, having broad, long petals, forming a perfect ball. Vigorous grower, strong stem, furnished with foliage up to the flower. A grand flower and good shipper.

MRS. HENRY ROBINSON, a perfect form of the Queen of England type, of exceptional merit, large and well finished. An early white blooming with us October 5th. Fine substance and very lasting.

MISS GEORGIANNA PITCHER, yellow variety that will make a reputation for itself. Foliage and stem Al. dwarf habit, flower incurved, good size, fine color, of great substance. Magnificent variety.

Price, 50c. each; \$5.00 per dozen; \$35.00 per 100; \$250.00 per 1000. March 1st, 1895 delivery.

AWARDED FIRST PRIZE IN BOSTON FOR TWELVE VARIETIES NAMED INTRODUCTIONS OF THE CURRENT YEAR.

News Notes.

BRIGHTON, N. Y.—J. Frank Morris, nurseryman, has made an assignment to J. D. C. Rumsey.

NORTH WEARE, N. H.—J. G. Herrick & Son have added another plant house to their establishment.

QUINCY, ILL.—A chrysanthemum show was held here by one of the churches. It was a very great success, and drew a crowd of visitors.

MIDDLETOWN, N. Y.—A chrysanthemum show was held here by the Congregational Church. The attendance was large in spite of bad weather.

VICTORIA, B. C.—A flower show was given here by one of the Sunday schools. The plants shown were very creditable. Mr. Geo. Fraser was the judge.

SHELBYVILLE, ILL.—Mrs. E. A. Van Dyke, the florist, died, last June. Mr. Van Dyke has sold the business to Mrs. E. H. Martin, who will continue it.

LARCHMONT, N. Y.—W. B. Edwards & Bro. late of Pittsfield, Mass., are about to start in business at Cloverley Farm here, raising forced vegetables and flowers.

GRAND RAPIDS, MICH.—Schmidt Bros. Floral Park, is the title of a new establishment on Park avenue. Two houses have been erected and others will be added.

SCHENECTADY, N. Y.—J. E. Felthousen held a chrysanthemum show here the second week in November. It was an excellent display, and was visited by large numbers of people. No admission fee was charged.

OWATONNA, MINN.—The Owatonna Floral Association held its third annual chrysanthemum show November 2. There was a good exhibition, and entertaining speeches on floral subjects were made by several members of the society.

SALT LAKE CITY, UTAH.—The Utah Nursery Co. made an assignment November 12 with liabilities amounting to about \$115,000; assets not stated, though the company claims to have assets far in excess of liabilities. Melville B. Sowles is assignee. The heaviest creditor is the firm of W. & F. Smith, Geneva, N. Y., who hold notes and mortgage, which with interest amount to \$39,210.44. Notes and mortgage held by Wm. Smith individually amount with interest to \$21,511.13. Other heavy creditors are A. Keysor, note and mortgage, with interest, \$33,175 00; W. S. McCormick, note and interest \$16,391.15.

OXFORD, OHIO.—The ladies of the Presbyterian church here have been holding a chrysanthemum exhibition and with great success. For a small town like this to attempt such an undertaking is no easy task, yet it is evident that it was worth the venture. Next year undoubtedly much better results will be achieved. A noticeable feature was the large number of seedlings exhibited; some of them remarkably pretty. A large group of miscellaneous plants staged by the local florist R. M. Walker was very attractive. A collection of 12 vases of specimen blooms of leading varieties from the same exhibitor was however the leading feature. Entertainments were given each evening of the exhibition.

PARTIAL LIST OF STOCK PLANTS OF CHRYSANTHEMUMS.

	EACH.	PER DOZ.
Mrs. E. G. Hill, best early pink.....	20c.	\$2.00

HOLLY

It is conceded that the successful delivery of perishable stock in the best condition exactly when demand is active is secured only as the result of considerable experience and close study of all the controlling conditions. During the past ten years we have studied these conditions and have the experience. We have faith that we can supply "First Class Stock on Time," and to prove our faith by our works, on all orders given us in season we will guarantee arrival or no pay. We attempt no competition in price with stock which has never yet arrived, or—arrived after Xmas. "A Case of Holly in front of the store is worth four (4) on the cars."

HERMANN RÖLKER, 218 Fulton Street, NEW YORK

News Notes.

TAUNTON, MASS.—Clarence A. Briggs retires from partnership with Mrs. Jennie L. Briggs who will hereafter conduct the business alone.

SELMA, ALA.—A chrysanthemum show was held here by one of the church societies. A number of premiums were awarded, calling out brisk competition.

CHARLOTTE, N. C.—A successful chrysanthemum show was held here November 4-5. The exhibits were almost entirely amateur, but were well staged and attractive.

CLEVELAND, O.—The Gordon Park Greenhouses gave a chrysanthemum show the first week in November at their establishment. The place was in fine order, and the floral display very fine.

BIRMINGHAM, ALA.—The chrysanthemum show held here November 9-10 by the Ladies Aid Society resulted very successfully. Prizes were awarded both for plants and cut flowers in several classes.

RALEIGH, N. C.—The chrysanthemum show held here by the King's Daughters was beautifully arranged, and drew a crowd of guests. Both plants and flowers were fine specimens of leading varieties.

DETROIT, MICH.—Fred Waltz, one of the oldest florists and nurserymen here, has recently retired. His florist business will be carried on at his old location by H. G. Flammer, and the nursery by Fred Waltz Jr.

OSWEGO, N. Y.—The show held here for the benefit of the local hospital brought out some excellent exhibits from Mrs. Palmer and Messrs. Workman and Northrup, as well as from private gardeners. Pitcher & Manda, Short Hills, N. J., were also exhibitors.

PRINCETON, N. J.—The sixth annual exhibition of chrysanthemums under the direction of Wm. G. McTear was held as usual in one of the large greenhouses during the week ending November 17. The attendance was very large and visitors were delighted with the beautiful and effective display.

LYNN, MASS.—For a town of its size Lynn is undoubtedly the hanner town in number of florists. It has been computed that there are eighty-seven individuals here who hang out their shingle as florists. The population of Lynn is about 65,000. Harry Corfield has opened a new flower store here.

DAVENPORT, IOWA.—The chrysanthemum show held here in Library Hall was very effective. The floor was laid out by J. T. Temple as a landscape garden, the exhibits being artistically grouped. Among the florists making exhibits were Mrs. Crow and Messrs. Bills, Dannacher, Temple and Green of Davenport, Knees of Moline, Ill., and Gaethje of Rock Island, Ill. There were also a number of exhibits from amateurs.

SIoux CITY, IOWA.—J. C. Rennison gave his annual chrysanthemum show here November 6 to 10. The show rooms were amply decorated with hunting and Japanese lanterns, and there was a fine display of decorative plants and cut flowers, irrespective of chrysanthemums, which were lavishly shown. The people of Sioux City look forward to Mr. Rennison's show as an annual social event, and it is very liberally patronized.

The Chrysanthemum.

Get out, you poets, you who say
The melancholy days have come;
A thousand voices tell us of
The gay chrysanthemum.
—*Detroit Free Press.*

He had no overcoat to wear
Though chilly days had come,
But he'd slaved and saved almost enough
For one chrysanthemum.
—*Chicago Inter Ocean.*

Nature on a busy day
Made the flower fair;
Then being quickly called away,
Forgot to comb its hair.
—*Chicago Record.*

Nature knows her bus'ness,
Knows it true an' square;
Soon we'll have chrysanthemums
'Long with foot ball hair.
—*Washington Star.*

If there is a language of flowers, what does a 6-inch-across chrysanthemum say when it buttoholes a man?—*Philadelphia Times.*

Mrs. Hicks—"You haven't brought me any flowers to wear."
Mr. Hicks—"Why don't you save your mouey, and wear your poodle dog for a chrysanthemum?"
—*Puck.*

Chrysanthemum Names.

The varieties of chrysanthemums on exhibition were many. Most of them are named after the friends of florists who reared them, and if the men and women who bear the names look like the flowers they must be aristocratic in appearance, handsome or beautiful, and luxuriously languorous. It is sad to think that some very homely persons may be thus honored. A lady with red hair and most irregular features may be well enough beloved in some chrysanthemum nursery to have her full name conferred on a big drowsy flower with waxen white petals. A gentleman with a tomato-colored nose and whiskers which are periodically dyed may have a sufficient pull with somebody in the chrysanthemum business to have his cognomen distinguish a flower which has uniform color. The Mary Ann Jones and the John Thomas Smith chrysanthemums are not yet on the market, but if the use of full proper names goes on these and other familiar patronymics will eventually fill chrysanthemum catalogues.—*San Francisco Chronicle.*

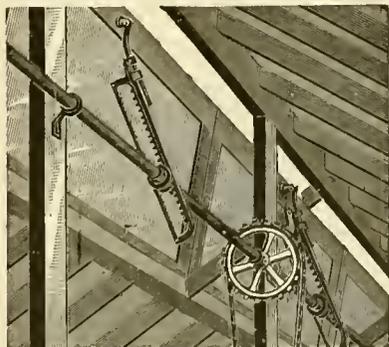

PROVIDENCE, R. I.—Fire was discovered in the greenhouses of Z. R. Corp on Prairie avenue on the morning of November 9, caused by an overheated pipe too close to the woodwork. Damage slight and confined principally to plants injured by smoke.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Doppfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.
Send for price list and samples and we know you will give us an order.

News notes	434, 436
St. John, N. B.	438

IN THIS ISSUE we print an article on the arrangement of flowers, kindly prepared on request, by Mrs. J. J. Glessner, a Chicago lady who is a true lover of flowers and who has acted as one of the judges of floral arrangements at the last four or five of the Chicago shows. We believe her suggestions and recommendations, coming as they do from a lover and buyer of flowers, and one entirely free from any trade prejudices, but who has at the same time made the arrangement of flowers a study, are worthy of special consideration.

THE EXHIBITIONS.

Toronto.

Where every one does his level best for an undertaking with foresight and discretion success is pretty well assured, and certainly everybody connected with the late show held here, from the bottle filler to the president, worked with a will that could not fail but lead to the finest show on record in this country (for all that though we can all see where improvements can be introduced next year). The Pavilion was prettily decorated in German style by Mr. C. Arnold and the layout of the various cut flower tables, groups of chrysanthemums and groups of foliage struck every one as being the greatest of all the improvements over previous years; it was a new departure altogether from the old cut-and-dried right up and straight down style. The credit for this is due to Mr. Geo. Philip, who acted most efficiently as superintendent.

The day before the show opened, with the thermometer showing ten degrees of frost, making it very difficult to handle large or tender plants, consequently several specimen chrysanthemum plants owned by Exhibition Park and Mr. J. H. Dunlop were frozen stiff and rendered unfit for exhibition, many other plants were more or less injured, including some of the fine specimen ferns from Exhibition Park also. The time for staging plants had therefore to be extended and as the next day was a little milder exhibitors were able to get their plants in with less trouble and everything was staged before five o'clock on the Tuesday afternoon.

The plants taken altogether were better than last year and the cut bloom was decidedly better all round. The judges, Messrs. C. Swift (plants) and R. Flowerday (cut flowers and designs), had a difficult task, but it is safe to say that no two judges ever gave better satisfaction in Toronto or were better liked by all the boys than this team.

Mr. A. Macpherson, gardener to Col. Sweny, again this year captured first prizes for the best both 12 and 6 varieties, among these two lots the best were President W. R. Smith, Lilian B. Bird, Crystal Wave, an old white variety, not a large

flower but very pretty, E. G. Hill, W. H. Lincoln, always good, Good Gracious, A. G. Ramsay, etc. Mr. Houston (Central Prison) was second with twelve good plants, many of them of the newer kinds including Queen, L'Enfant des Deux Mondes, Laredo, G. W. Childs, Harry May, Hicks Arnold, etc. Manton Bros. showed some very healthy looking plants which took second in the six and first in the three specimen sections. In the section for one specimen, any variety, any sized pot, some of the finest plants in the show were set up including the two W. H. Lincoln mentioned above. Other noticeable specimens were Mrs. W. S. Kimball (not a good color) by Exhibition Park, G. W. Childs and Eugene Daille-douze by Central Prison, W. N. Rudd by J. H. Dunlop, Puritan, a very low grown broad specimen by Manton Bros., Mermaid (syn. V. H. Hallock) by F. Burfitt. The exhibit of single stem plants was very fine and attracted lots of attention. Mr. Laing of the Huron Nurseries took first in all the sections but one with splendidly grown plants and very large well colored blooms. Horticultural Gardens (A. Watkins) came in second in all sections but one with plants that were at perfection two weeks earlier; they had been very good and would have come in first in some places. Mr. A. Gilchrist was first for 12 plants of distinct varieties. In this class some of the best varieties shown were Golden Wedding, W. H. Lincoln, Irving Clarke, Niveus, Minnie Wan-amaker, Domination, Queen, Harry May, Pres. W. R. Smith, Dawn, O. P. Bassett. For 24 plants of twelve varieties in 6-inch pots there was good competition, Horticultural Gardens taking the first prize for a nice dwarf lot with good bloom, A. Gilchrist a close second.

The groups were a lovely feature of the show, the green of the palms and ferns seeming to relieve the eye. Those put up by Huron Nurseries, Horticultural Gardens, John Cotterill and Exhibition Park were especially good, others would have been better if the cold weather had not kept the tenderer plants at home.

Now I come to the cut bloom and one feels like expatiating on the beauties and good points of so many varieties enough to fill this issue of the FLORIST, but as ours is the latest of the shows and a good deal of expatiating has already been done I will spare your early show readers as much as possible. Messrs. Nathan Smith & Son put up a magnificent lot in the 25 distinct varieties section and they nearly all, as in other sections, kept good till the last; they were Ed. Hatch, Golden Wedding, E. D. Smith, Inter Ocean, C. B. Whitnall, Goguac, Maud Dean (very fine), Emma Hitzeroth, Portia, Eugene Daille-douze, Vivian-Morel, Queen, Chas. Davis, a pretty creamy bronze, Lincoln, Titian, Mr. P. W. Smith, L'Enfant des Deux Mondes, Chas. Molin, Mrs. C. Lippincott

Princess of Chrysanthemums, H. Balsley, Mrs. F. L. Ames, Niveus. Mr. J. H. Dunlop was close behind on the first day, but his blooms were softer and did not keep as well; his varieties not among the above were Miss M. A. Forepaugh, Mrs. J. G. IIs, very large but too heavy for the stem, Judge Hoitt, Harry May, Ada Spaulding, Ingomar, American Flag, Good Gracious, Mrs. A. Hardy, Monarch of Ostrich Plumes.

For 12 distinct varieties Mr. R. Mearns of Parkdale, Toronto, was first with grand blooms of James Eadie, a lovely shade of pink and very good, G. W. Childs, Golden Wedding, immense, Mrs. J. Jones, Good Gracious, etc. Nathan Smith & Son a close second.

In the vases of 12 blooms, one variety. Messrs. Nathan Smith & Son took firsts for white, Niveus; yellow, Eugene Dailedouze and pink, Harry Balsley. Mr. J. H. Dunlop was first for any other color with Harry May to perfection. In vases of 6 blooms, one variety, Messrs. Nathan Smith & Son took firsts for white, the best Queens and the most beautiful blooms in the show; pink, Viviand-Morel, and any other color, Chas. Davis, a fine variety when well done, though the color would not suit every one. Mr. R. Mearns was first for yellows with 6 of the largest blooms in the show, Golden Wedding. Mr. M. can grow this variety perfectly. Messrs. Nathan Smith & Son were second with Major Bonnaffon, decidedly one of the best yellows.

Among the new varieties of 1894 shown were Mrs. J. Geo. IIs, white with greenish center, I don't like it; James Eadie, light pink, good; Ingomar, R. M. Gray, Iora, Oriana, Joey Hill, weak neck; Pitcher & Manda, good for exhibition when well done as it was here.

A certificate of merit was awarded to the "Philadelphia," which is certainly of a new shade (pale straw I should call it by daylight) and a beautifully formed bloom. The blooms had been shipped on the Saturday before the show and arrived on the Tuesday in only fairly good condition; they would probably have been better a week or two earlier.

A box of fine bloom was received from Messrs. E. G. Hill & Co., among which was Challenge, very good, but it does not do well round here, a large white seedling, Hy. Rieman and many others.

Messrs. Pitcher & Manda also sent a box of bloom, among which was a vase of Pitcher & Manda, which does well in these parts, an immense bloom of Eugene Dailedouze and a yellow seedling, Mrs. Bryant, large and good color, and many others. Many thanks, gentlemen.

Palms were all good and they were well placed, so as to relieve the eye among the masses of bloom. John Cotterill, J. McKerrigan, Grainger Bros. and Manton Bros. were the principal exhibitors. Ferns were as usual well shown by Exhibition Park, Huron Nurseries, Col. Sweny and Manton Bros. In orchids Exhibition Park and John Cotterill excelled, some beautiful varieties being shown.

For floral designs there were ten entries in each section. Mr. F. Burfitt "got there" for a cross of white chrysanthemums, a beauty. Messrs. Grainger Bros. were first for a crescent wreath of pink tinted chrysanthemums. Mr. G. H. Mills, a rising star, took first for presentation basket, chrysanthemums, two colors, and Mr. John Cotterill first for flat basket for table.

Decorated mantels although they made a very good effect where they were placed were not quite so well done as usual, owing probably to the cold weather pre-

venting the competitors from bringing out the right stuff. John Cotterill was first and Huron Nurseries second, but tastes differed on this judgment.

The carnations were all good, but with the exception of some J. J. Harrison, Edna Craig and Garfield they were all asleep before the show was closed. The bunches of 50 with any green not necessarily grown by the exhibitor were much admired and made a fine table; the first prize was taken by Messrs. S. Tidy & Son.

The roses as usual were magnificent and fully up to the Toronto high water mark. Mr. H. Dale of Brampton took firsts for Bride, Wootton, Sunset, Hoste, Beauty and any other variety; Mr. J. H. Dunlop took first for Perle, Mermet, Bridesmaid and American Belle, and Messrs. Spears & Muston were first for Madame Cusin, the seconds and thirds being divided up between the three. The vases of 50 roses, arrangement to count in judging, not necessarily grown by the exhibitor, were one of the principal features of the show and always had a crowd round them, and in the first three the judge had to look closely for defects and would have liked to give them all firsts. Mr. H. Dale was ahead, Messrs. S. Tidy & Son second and Messrs. Spears & Muston third. Violets were well shown but there were not so many entries as usual; Manton Bros. were first among the bunches of double and A. Gilchrist for single.

NOTES.

The Toronto chrysanthemum show of 1894 was a financial success, it has now become a fashionable event. Mr. Herman Simmers worked the advertising department with great effect, also the treasury department, and the association wants to see to it that they secure his services for next year.

We want less large specimens next year, an 8-inch pot is big enough for most people these days. What a lot of improvements one always sees that can be made next year.

The flower booth made more money this year than ever before, mainly I think owing to the exertions of Mr. W. Muston and Mr. W. Hill. Mr. Muston was kept hustling to keep the booth supplied with good stock, no other would do, first rate blooms sold on sight.

What appeared to strike Mr. Elmer D. Smith most here was the size of two joints of beef at Mr. Watkins' house where dinner was served for exhibitors, etc. What struck Mr. C. Swift most was the paucity of hat pegs on the doors. What struck Mr. R. Flowerday most was the capacity of some of the boys for Hopkin's "special." And what struck all these three gentlemen at once was the way the trains had of not waiting at the depot until they got there.

Seven hundred square feet of table were filled with cut bloom, too crowded in many places.

Country friends came in by the score on Thanksgiving Day, among them were Messrs. W. Foord and Mason of Peterboro, Mr. J. Hay, Brantford, Mr. Mitchell of Inerkip, Messrs. S. Ayllett, Foster and Townsend of Hamilton.

Cut bloom stood the four days remarkably well, the majority with the exception of carnations and roses being as good at the end as at the beginning. The following are some of the best keepers: Mrs. J. Jones, Pres. W. R. Smith, Harry May, Queen, James Eadie, Pitcher & Manda, H. Balsley, Golden Wedding, Mrs. C. Lippincott, Mrs. R. Craig, Domination, Judge Hoitt, Mrs. C. Duhme, E.

Dailedouze, Major Bonnaffon, Niveus, Maud Dean, Tuxedo, and here and there a Viviand-Morel.

The reading room was not quite a success some how or other, plenty of interesting horticultural literature was there, and every convenience, but the secretary's office seemed to have greater attractions. Cigars and champagne might be tried as a drawing card for the reading room next year.

Buffalo was well represented by Mr. and Mrs. Wm. Scott, Mr. Mepsted, Mr. Anderson and two or three other gentlemen whose names I could not learn.

Messrs. Nathan Smith & Son beat us in many of the cut bloom sections, but the vanquished appeared to take the beating with great equanimity. We hope he will try it on again next year.

The Toronto roses in the store windows also struck Mr. Elmer D. Smith as being exceptionally fine, he visited Mr. H. Dale's establishment at Brampton, and was astonished thereat. Now let us begin to prepare for the chrysanthemum show of 1895. E.

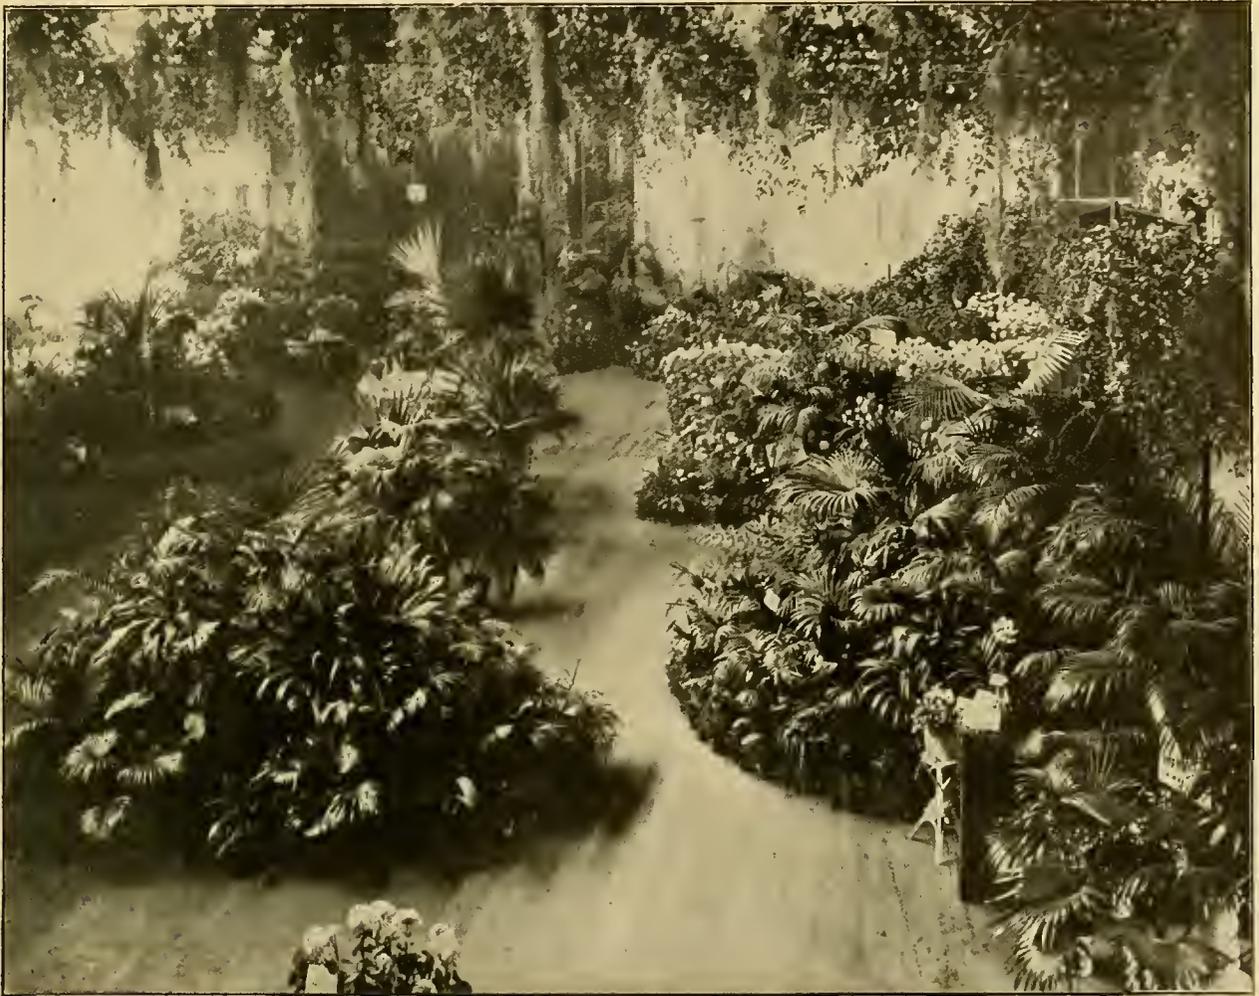

Springfield, Mass.

The chrysanthemum exhibition of the Hampden County Horticultural Society November 13, 14 and 15 closed the season's shows. This society has given seven exhibitions this year, and as far as a beautiful display goes this exhibition surpasses all their previous efforts. The arrangement of the hall was very effective; the stage end was a park scene on canvas, flanked and bordered with greens and trees, so that it was hard to see where the natural ended and the artificial began. This formed a sort of reception headquarters, where the patronesses and officers met their friends, and from which the sight was most beautiful, being just high enough to afford a fine view of the entire floor. At the opposite end was a Japanese pagoda, the lower floor being given up to the sale of flowers, while the next was a music stand from which the best orchestra in the city entertained the audience. From the stage one could see the entire floor, first the vases of 100 blooms competing for a prize of \$50 in gold, then specimen plants all about the center, while the tables for cut blooms were arranged in fanciful form on either side. The exhibition was admirably conducted, the private view to members and invited guests which just preceded the opening hour was a pleasing feature; this helped to draw the attention of society people, and helped to make the chrysanthemum show an exceedingly popular affair. The exhibition was opened by the mayor in a congratulatory address.

The finest bush plants ever grown in this locality were shown by A. N. Pierson of Cromwell, Conn.: 22 of these beauties filled a large box car. They were grown in 14-inch pots, which debarred them from competing in the regular classes, the limit being 12-inch. The entire lot was granted a gratuity equal to first prizes. Tuxedo, Golden Gate, C. B. Whitnall and Ivory were fine specimens.

H. C. Rowley of this city took five first prizes for plants, and one second. H. C. Alden and F. M. Hamilton were also winners of first prizes in the plant classes.

The cut blooms were a very fine lot; not often do we see so many well grown blooms displayed. Mr. A. N. Pierson took a majority of the prizes, being first in class for display, also for twenty-five, for 12 and for specimen, his specimen bloom being Minnie Wanamaker. Other awards for cut blooms went to Collis & Tucker, Ware, Mass.; W. N. Craig,

GROUPS OF DECORATIVE PLANTS AT THE CHICAGO SHOW.

Taunton; Zenas Crane, Dalton (Edward Dolby, gardener). A. N. Pierson also took all the firsts for roses, showing some very beautiful flowers, his best single bloom being K. A. Victoria.

Carnations were well represented. E. H. Howland took first for display, A. N. Pierson second and Collis & Tucker third. H. E. Chitty of Paterson, N. J., exhibited two varieties, Alaska and Corsair, which were given certificates of merit. B. J. Shaw took first for single variety, a seedling of robust habit, full and large, a little darker in color than Nicholson. W. N. Craig took second for single variety with Nicholson, and H. E. Chitty third with Minnie Cook.

The special prize for best 100 blooms (chrysanthemums) was awarded the city of Hartford, entered by the Hartford (Conn.) Horticultural Society; it was a truly magnificent vase of flowers. The exhibit from the city of Philadelphia was next in quality, but lacked in count as well as size of bloom; this was entered by the Penn. Hort. Society.

W. N. Craig of Taunton exhibited some fine Swanley White violets, for which he was given first place. R. E. Shupheldt of Chatham took first for Marie Louise and Lady H. Campbell. H. L. Loomis of Westfield was on hand with his ever-blooming clematis. L. W. Goodell of Pansy Park had a vase of *Schubertia grandiflora* which attracted much attention. H. Grout had four varieties of

seedling carnations. C. R. Miller & Co. made a display of roses, filling 11 vases; these were not for competition. Grallert & Co. of Colma, Cal., sent their new semi-double marguerite, but they didn't arrive until the last day of the exhibition and were very much dried and wilted, so that their beauty could not be judged.

George Keneday of Westfield, R. J. Norman of Lee and George H. Thompson of Lenox acted as judges. Mr. Robert Johnson and Mr. Edward Dolby were also among the Berkshire gardeners that visited the exhibition.

Mobile, Ala.

The first annual show of the Mobile Chrysanthemum Club, and the first chrysanthemum show ever held in Mobile is over. As a fine display of chrysanthemums and other flowers and decorative taste it has been a great success. In the matter of attendance it was not as good as we hope for next year. The hall was beautifully decorated with a frieze of wild smilax, dados of native palms and grey moss wherever it was effective. The orthodox Chinese and Japanese lanterns were, of course, made use of. Quite a beautiful effect was had by the arrangement on the walls of "living pictures" of chrysanthemums. Tastefully arranged clusters of flowers were inserted in jars which were fitted in handsome frames with richly colored silk backgrounds.

The backgrounds were made to harmonize with the colors of the flowers and the rich green foliage.

Among the most beautiful of the chrysanthemum exhibits was a vase of some twenty-five cut blooms from G. R. Gauze & Co. of Richmond, Ind. The Westview Floral Co. of Atlanta, Ga., made a fine exhibit of Brides and other roses. A. Strickler of Louisville, Ky., sent an exhibit which was delayed in transit and was not therefore as fine as it would otherwise have been.

The best exhibits for competition were made by Dr. Price of Boonville, Miss., and Mrs. Allen of the same place. Dr. Price showed a vase of 25 very fine Minnie Wanamaker and another vase of not less than twenty-five varieties. In this vase the notably fine flowers, although all were handsome, were Pitcher & Manda, Harry Balsley, Marguerite Graham, The Queen, Major Bonnaffon, Laredo, Pres. W. R. Smith, Golden Wedding and Viviand-Morel. Mrs. Allen showed a fine vase of twenty-five Dailedouze. The best specimen plant, any color, was a Geo. W. Childs, exhibited by Miss Maria Minge. The best single cut bloom was Elmer D. Smith, a well clothed flower of good substance and growth, exhibited by Col. Davis.

A. H. Hews & Co. of North Cambridge, Mass., made a trade exhibit of flower pots and were also represented by twelve handsome jardinières offered as premiums.

Ours was the single judge system and the awards were made, except in table decoration, by Mr. Abner Gamis of the Peachwood Nurseries at State Line, Miss. The table decorations were very beautiful and the judges, a committee of three ladies, tied the blue ribbon between those set by Mrs. Penrose Vass and Miss Maria Minge, the former being decorated with white "mums" and ferns, and the latter with pink roses and carnations.

The display of foliage and decorative plants was very creditable. Miss Maria Minge and Mr. C. Ravier being the principal exhibitors, while Mrs. Harvey Jones, an amateur, had some remarkably fine specimen ferns. Miss Mary Douglas, also an amateur, showed the finest rubra begonia I have ever seen, and her collection of begonias captured G. R. Ganze & Co.'s special premium. Col. Davis secured E. G. Hill & Co.'s special premium for best vase of Mrs. E. G. Hill.

Many of the exhibitors, presuming on the mildness of our climate, had not sufficiently protected their plants, and a day or two before the show a killing frost blighted their hopes for this year. It is quite evident that glass is necessary for the production of first-class prize takers. The "snug harbors" we hear so much of in amateur magazines have proved a delusion and a snare to many of the exhibitors, and besides this the open ground "mums" have neither the depth, body nor purity of those from the greenhouse.

We have every reason to be satisfied with our entry into the growing family of chrysanthemum shows. Our displays were grand and a revelation to the people of Mobile. The success of the show is largely due to the untiring efforts of Miss Maria Minge, who does not know what failure is and who is always in the right place at the right time. Nearly the whole burden of the show was on her shoulders and the arrangements, decorations, placing of exhibits, etc., were done under her direction. J. W. G.

Chrysanthemum Society of America.

PHILADELPHIA.

In my hurry in reporting the new varieties of chrysanthemums which were awarded certificates of merit by the committee appointed to examine seedlings at Philadelphia last week I omitted the following:

Miss G. Spaulding (Thos. H. Spaulding). This is white in color; an improved Mrs. Robert Craig. It is an exceedingly well built flower, and altogether a charming variety.

Miss Helen Bloodgood (Thos. H. Spaulding). This is a clear shade of pink, a very pretty and distinct flower. Incurved Japanese.

Mrs. Wm. H. Kemble (Chas. W. Cox). This was presented for examination on November 24. It is white Japanese, very distinct and beautiful; flowers are full to the center. The florets or petals somewhat resemble those of the variety known as Elkshorn. This should prove a valuable late variety. E. L.

St. Paul, Minn.

The St. Paul chrysanthemum show was gotten up entirely by Mr. Aug. S. Swanson, who deserves the greatest credit for his enterprise and public spirit. The attendance was fairly good, but not enough to pay expenses, which seems strange, as the weather was uniformly good, and all the visitors were delighted with the show. The exhibits included chrysanthemums, both plants and cut flowers, decorative plants and floral dec-

orations. There were well arranged dinner tables and a wedding canopy which was greatly admired. A wedding decoration in Vivand-Morel chrysanthemums was very good, the favorite dinner table being decorated with Mme. Caroline Testout roses. The artistic arrangement of exhibits was specially commented on. One very pretty feature was a flower booth, where blossoms were sold by a pretty Japanese. Good music made an additional attraction.

Thoughts on the Exhibitions.

Wouldn't it be best to limit the height of single stem plants to 2 feet 6 inches, or 2 feet 10 inches.

What is the use of putting up any other white against the Queen? No matter how fine the variety may be there seems no chance for any other sort with Queen in the race. The Queen takes on a finish and lustre—if such a word is proper—that surely places it ahead, and yet as a commercial flower the store men find fault on account of its dropping the petals.

It seems to me the C. S. of A. ought to award certificates to any deserving variety not previously honored. Why exclude foreign introductions if they possess undoubted merit? The way certificates are awarded now foreign introductions are practically excluded. H.

The Philadelphia Show.

Mr. T. H. Spaulding requests us to state that the potted plants of his new variety, noted on page 370 of our issue of November 17, were not exhibited by him, but by the originator, who had reserved the right to exhibit the variety at the Philadelphia show of 1894. The cut flowers were shown by Mr. S., but not the plants, as might possibly be inferred from the wording of the paragraph.

Notes on the Newer Chrysanthemums.

A few thoughts on the noted varieties of the newer chrysanthemums may not be amiss now the season is about ended: M. Richard Dean (Calvat) is one of the choice things of the season, a most lovely reflexed pink that captivates the eye at once. A fine commercial sort.

Madame Chas. Molin: The largest of all the white varieties, of the shape and style of Beacon but of double the depth and two inches more in width. An exhibition beauty.

M. Benj. Giraud: As rich in color as a G. W. Childs, opens its flowers by 10th of October, of massive build and good form. John Shrimpton, one of the finest and best of all the high colored chrysanthemums, does not burn and can be depended upon. Fisher's Torch, intermediate in color between Mrs. A. J. Drexel and G. W. Childs, a very warm Indian red. Eider-down, a valuable white for commercial use, splendid. Le Rhone, golden yellow of large massive build, and most superb color. Must be taken from crown buds. Hammond Spenser, pale blush of massive build and charming texture. J. Agate, incurved Japanese of immense size, pure white, will grace any exhibition table. Miss Ethel Addison, incurving Japanese, silvery amaranth color. Rose Shotta, purest white, of great depth, Mrs. R. W. E. Murray, the largest of all incurving whites with double the number of petals possessed by the Queen. Mrs. G. J. Beer, a rosy purple, not a desirable color, but this variety for size and depth stands unequalled. Mrs. Geo. Addison, large Japanese, color pure white tinted on outer petals soft mauve.

James Comley, a most unique and striking novelty. Long drooping petals, silvery magenta, with a white stripe down the center of each petal, 11 inches across. Minerva, one of the indispensable varieties for single stem pots, equally good for cut flowers; Judge Benedict, another excellent yellow for single stem pot culture. Achilles is one of the finest of all late varieties, a most massive flower of the Ed. Hatch type with a stiff stem. Mayflower, a most excellent white. Mrs. Geo. West, large, bold and splendid exhibition variety. Mrs. Howard Rineck, rather pale but one of the best pinks.

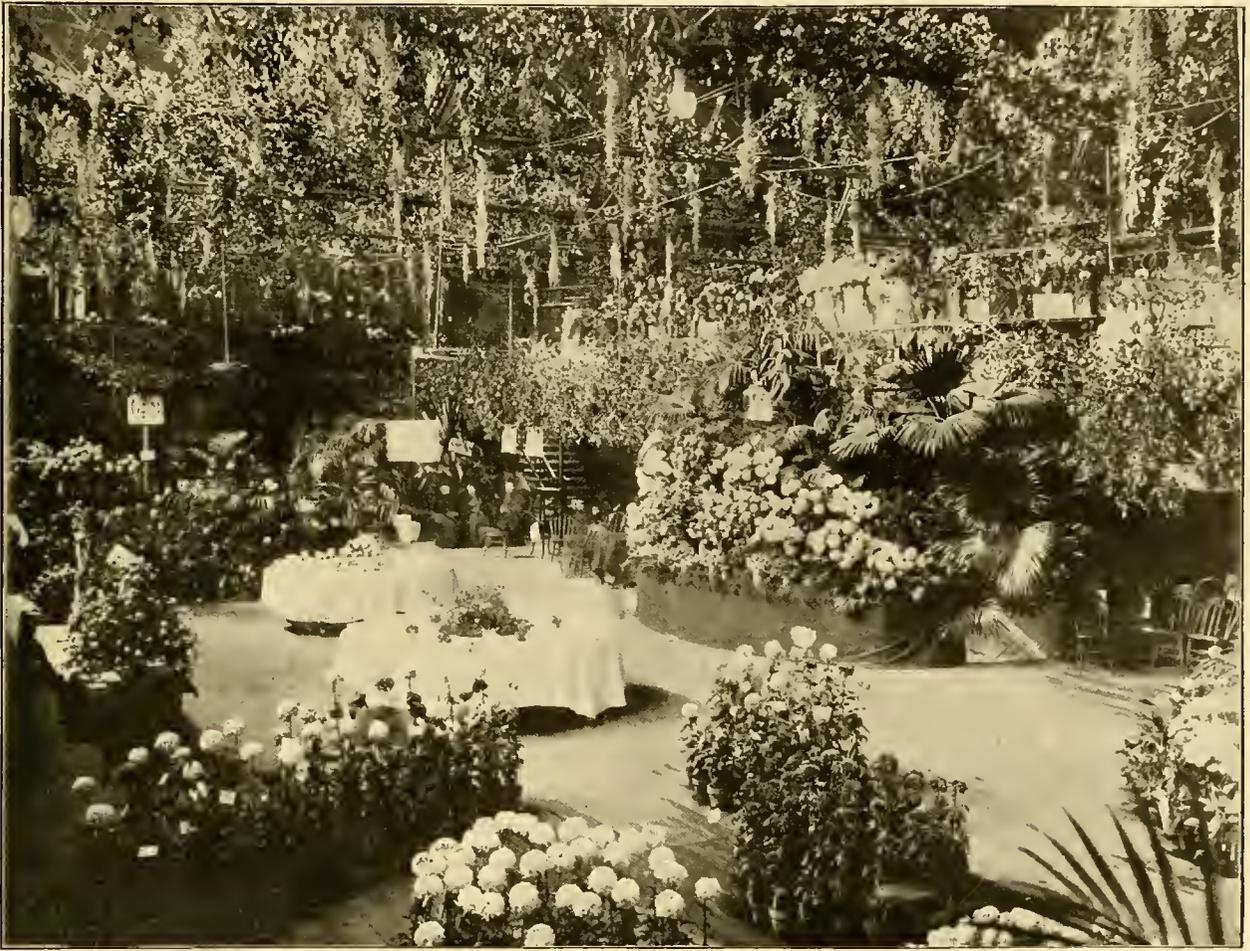

Mrs. E. O. Wolcott, one of the largest of the year's introductions, color rosy silver. Mrs. Geo. Magee, silver pink, crowded with petals, can't be left out of the exhibition varieties. Georgienne Bramhall, light or primrose yellow, one of the very best of the year. Mrs. H. McK. Twombly, pure white, very early, splendid. Silver Cloud, a most excellent variety, distinct in color, cream shaded apricot. Wanlass, a charming pink of great size, the only fault is its tall growth. Rose Wynne, quite unequalled in purity of color, of a pure tone in white which places it distinct from all other whites.

The above varieties equal or surpass anything that has been disseminated and are worthy a place in the most select collections, and are on a level with such varieties such as Queen, Dailedouze, Bonaffon, Mutual Friend, Sunderbruch and other noted sorts. E. G. Hill.

A Few Big Blooms.

A number of blooms recently received at this office from E. G. Hill & Co. included several new or little known varieties. At the head of all for distinctness and novelty we should place the new variety called James Comley, which was brought from Japan by Mr. Comley last year. It is a large, rather flat recurving flower. The petals are as flat and even as narrow ribbons, the outer ones strongly reflexed, and often twisted into an irregular spiral. The color is a soft light magenta, with a hair line of white near the edge on either side of the petal. The distinct coloring and shape makes this distinct from any other chrysanthemum we know, and we believe this will be a very valuable exhibition variety. It has excellent foliage, right up to the flower.

Several famous French sorts were sent, noticeable among them Mme. Chas. Molin, one of the largest and most noted French sorts, which appears among the winning sorts in most foreign shows. It is white, a huge crazy-headed bloom spreading 8 inches across and 7 inches deep. The petals are most irregular in shape, and rather brittle in texture. To our mind it is coarse, only fit for exhibition. Mme. la Comtesse de Galbert was a large incurved flower, rosy cream, shading to yellow in the center. The color is not very clear, and it did not make a very favorable impression. Monsieur Panckoucke, a very large flat light yellow, next came into notice. It is an extremely solid incurving flower, so tightly built that the central petals seemed to interlace. This was a favorite exhibition sort in England this season. An old but beautiful sort accompanying these was Etoile de Lyon, which Mr. Hill justly observes is not grown as plentifully with us as it deserves to be, though a leading sort in England. It is quite large enough for modern requirements, the specimen sent us being 7½ inches across and six inches deep. The color is cream,

ANOTHER CORNER AT THE CHICAGO SHOW, SHOWING SPECIALLY THE OVERHEAD DECORATION OF AUTUMN LEAVES AND FLORIDA MOSS.

with a few streaks of red and the flower very solid and well built.

Among English varieties sent by Mr. Hill was James Lamont, a solidly built magenta flower, the color being very streaky. This did not give us a very good impression. Another was J. Agate, described by M. de Meulenaere as pure white, but the flower received by us was creamy, the outer petals strongly stained with crimson. It is very large, incurved, and broader at the base than the top. Mr. Hill says this can be done very well.

Two of Mr. Hill's seedlings, H. W. Reimers and Gov. Mathews, were noted for the first time. The first named is a yellow incurving flower, cross between incurving Japanese and Chinese. It is a remarkably solid flower and a good color. It opens November 10, and looks as if it would last until the holidays. Gov. Mathews is a large incurved flower, slightly whorled and very high built, color white, streaked and splashed with magenta. Some blooms of Challenge, received with the foregoing, showed up to far greater advantage than at the Chicago show, being much more advanced, and yet apparently not fully expanded. It looks as if this would be one of the latest of all yellows. The color was excellent, and the stems were clothed with fine foliage right to the top, an advantage woefully lacking with the French Monsieur Panckoucke.

THE NEW chrysanthemum exhibited by T. H. Spaulding at Philadelphia in com-

petition for the "Blanc prize" against the Philadelphia has been named the New York.

The Swainsona.

Will some one kindly tell me what is the matter with my swainsonas? I have some fine plants; the foliage is dark green and appears perfectly healthy; they set full of buds but 95 per cent of them drop off. They are planted in very rich soil and watered with manure water once a week or oftener. They are in the carnation house and they are doing well.

MONTANA.

Replying to the inquiry of your correspondent respecting Swainsona galegifolia alba, I feel sure that the "manure water once a week or oftener" is at the bottom of the trouble. We had a similar experience with some plants of our own. On one occasion our desire was to make an exhibit of plants in flower of this swainsona in pots, and in order to have the plants in as fine condition as possible we used manure water, not very liberally, as we thought, but what little was administered was too much for these plants, for all or nearly all the flower buds dropped before expanding. This was our first experience in the use of liquid manure in the culture of swainsona, and it will be the last.

Swainsonas require liberal root room for their best development, but the soil must be porous, and if planted in the solid

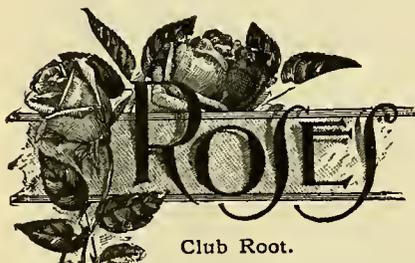

bed the situation must be well drained, if not so naturally then it must be made so artificially.

I had half a dozen plants of this useful florists' flower planted out in a solid carnation bed for two or three seasons, and they were certainly the admiration of all who saw them growing and blooming; and I have often regretted that I found it necessary to do away with them, which I did, on account of the space they occupied. It was not so much the space they themselves occupied, but the shade which they cast upon their surroundings. Some of the plants were eight feet high and six feet through. According to my own judgment, this is a plant which must eventually find a place in all establishments where cut flowers are retailed direct to their customers. It is also a flower which exemplifies in the extreme the necessity for cutting the flowers some time before placing them in the hands of retail customers. If cut from the plant and delivered immediately they have a tendency to wilt; but if cut and placed in a cool, dark refrigerator or cellar until, as John G. Gardner expresses the idea, the solar heat is thoroughly eliminated, it will give abundant satisfaction; and I would advise every florist who grows it to follow that plan. It has never seriously appealed to me as a flower for those who grow them for the wholesale market exclusively; but Mr. David Cliffe of Germantown, whose business is about equally divided between a wholesale and retail trade, has so much faith in its value that

he has planted the greater portion of one house with it, and he has expressed himself as being well satisfied with the results so far.

To return to liquid manure: Horticultural chemists claim that plants of the leguminosæ (pea) family—the same to which swainsonas belong—require little or no nitrogen (a very important food to plants in general) as they have the power of extracting all the fertilizing elements of that character from the atmosphere. Perhaps the manure water which we used contained too much nitrogen.

EDWIN LONSDALE.

Club Root.

Replying to your correspondent F. P. as to what is troubling his roses, from the description sent I should suppose they are afflicted with "club root." The only remedy that I know to help him at the present time is to give them about once a week or once in two weeks a dose of lime water. Take about a 12-inch pot full of fresh lime, slack it in the bottom of a barrel the same as a mason does for making mortar, when the lime is thoroughly dissolved fill the barrel (I allude to about a fifty gallon barrel, such as is used for kerosene, etc.) full of clear water, stirring it thoroughly, then allow it to stand from twenty-four to forty-eight hours, when the lime will settle to the bottom leaving the surface water clear. With this give the bed a good soaking as above. By adhering to this practice for the next two months I think he can do a great deal to help get his roses around into healthy condition. It will also be necessary to maintain as near an equal temperature as possible, say about 56° at night, put on air as soon as the temperature reaches 63° or 64° in the morning, gradually increasing with bright sun and reduce the same pro rata. A great deal depends upon the air as to getting the plants back into healthy condition again. The bed or bench should never be allowed to get dry, that is over dry or be saturated with water at any time so as to make the soil look like mud.

In several cases which have come under my observation and experience within the last two or three years this treatment has been of great benefit to roses afflicted like your correspondent's.

If he is growing Meteors in the same house with Brides and Mermets he will hardly get any good returns from them in the shape of flowers as they certainly need a higher temperature, but the additional temperature which would be necessary to mature Meteors to bring them to perfection would bring ruin to such varieties as Mermet and Bride as far as the quality of the flower is concerned and the health of the plants. These varieties should never be planted in the same house if best results are expected from them. They will do well enough with the same treatment for the summer, but when it comes to the winter the treatment for one is not at all suitable for the other.

The dropping off of the green leaves, as he describes it, I should take to be the result of the diseased roots, or possibly

he may have allowed the temperature of his house to sink too low at some time in the very near past. This causes a sudden check and chill and oftentimes will make the young green leaves drop very fast.

From the very meager data given I can only form the above opinion of the same, but should suppose that the above is the cause and have given the only remedy I know for the same. JOHN N. MAY.

Grubs in Rose Houses.

My rose houses are badly infested with grubs, and I would like to know the best remedy for exterminating them without hurt, or with little damage, to the roses. Can any one inform me right away what to do? GRUBS.

Your correspondent does not state what kind of grubs are infesting the plants, and as there are so many varieties of these pests it is hard to advise what to do. The most common variety found in rose beds or benches is the common horse fly grub. These are often produced in large numbers in the manure used and rarely do much damage to the roots. They vary in size and length according to age from half an inch or less to three-quarters of an inch, with white body and dark brown head. When fully developed and just before going into the chrysalis state they are about $\frac{3}{4}$ of an inch long and nearly a quarter of an inch thick. They feed principally upon decayed vegetable matter such as manure, etc., and in my experience rarely destroy the roots of plants. Prepare lime water made by slacking about a 12-inch flower pot full of fresh lime in the bottom of a barrel in the same way masons do for mortar, then when it is all thoroughly dissolved fill the barrel full of clear water, stirring it thoroughly and allowing it to stand thirty-six or forty-eight hours; when quite cold dissolve in water about four ounces of common washing soda, add this to the lime water stirring the whole again, then allowing it to settle as above. With the clear liquid give the soil a good soaking when it is a little on the dry side, repeat this in about two weeks and the grubs above described, also all earth worms and some other objectionable company for the roots of roses will disappear.

But if the grubs infesting your correspondent's plants are the larvæ of the June bug, spinchafer, or many other aliases with which this pest of warm June evenings is known (*Melolontha vulgaris*), this is an entirely different kind of an enemy and one that requires much more good generalship to do battle with if you expect to win the fight. This is also a very wary enemy, attacking the plants just under the soil, gnawing off the bark around the stem and by the time you can detect the damage it has done will have moved away carrying its full equipment of tools along and started on another path of destruction, possibly on a plant three or four feet away, and as sure as it starts its saws to work death will follow in its wake, unless caught and beheaded. To overtake and punish this desperado means careful watching and persistent work. The moment a plant shows the least signs of wilting in the young foliage stir the soil over carefully around the plant about one inch deep, if the grub has moved away do the same around the others near at hand till the enemy is found—what to do with him then I presume your correspondent will know. This animal is usually from one inch to one and a quarter inches long, of a light straw color, somewhat darker at the

extreme end, with a light brown head and usually assumes a form somewhat resembling a horse shoe.

There is still another kind of grub, and the most destructive of all, as it goes in large numbers. This is the larvæ of the *Aramigus Fullerii*, the common rose bug, which a few years ago was such a terrible pest where it once got a foothold. To do battle with this enemy needs plenty of ammunition, heroic courage and hard work, they being so numerous and of a totally different character to the last named, also of different habit as they bury themselves all through the soil. The young tender roots are the first victims of their warfare. When these are exhausted, or virtually so, they attack those nearer the stem. To erase them there is only one way that ever I have found and that is to clear the whole thing out, soil, plants and everything in the house that it is possible for them to secrete in, either the grubs or the mature bug; this last is a small brown insect about five-eighths of an inch long, with a hard shell. The whole should be burnt, including a scraping of the soil one or two inches thick from the floor of the house where it is at all loose. Perhaps your correspondent may think this means too much sacrifice to wage a warfare of extermination, all I can say is that it is the only means available, except persistent hand picking of the mature bugs, and a loss of nearly all the crop for two or three years.

But I hope it is not this last-named grub they have, and it may not be either of those mentioned as there are many other varieties which occasionally infest plant houses, but without more particulars I can not advise further than above.

I trust I may have given some suggestions which may be applicable in this case or of some use to others—but bear in mind that "eternal vigilance" should always be the watchword for all florists, at least such has always been the case with

JOHN N. MAY.

Summit, N. J.

Carnation Notes.

The sale of flowers depends greatly upon the condition in which they reach the market. Formerly all flowers were shipped or carried to the customer in baskets. Discontinue this practice at once; use boxes such as roses are packed in, never putting one bunch on top of another, for they bruise or injure each other even when bunched. Several growers are now packing carnations in the same manner as roses and they certainly carry much better than when in bunches of twenty-five, large flowers should never be put up in fifties. When packed loose the boxes should not be over four inches deep, line the box well with soft paper and see that before the cover is put on the box is well filled over the flowers with soft paper to keep the contents from shifting, for express messengers delight in hustling everything that comes within their reach.

Now this matter of packing loose will seem to many as a great undertaking; many retailers will say they prefer bunching and will not have them come to them in any other way, but if you have a superior article the retailer will be glad enough

to get your stock as you prefer to send it. It is an assured fact that loose packing is the best, and although it is a great innovation upon the established custom of the growers the day is not far distant when all first-class flowers will go to the market packed loose. While I have not yet adopted this method I must come to it and the boxes are now being made for this purpose. It must be understood that the finer stock looks when presented for sale the better price it will bring, and flowers of medium quality neatly and properly packed will often bring a better price than the very best goods. Never use old and soiled paper, for paper can now be procured so cheaply that there is no excuse for filth. Newspapers are often used for lining boxes; don't! they will serve very well for crumpling up to fill in the unoccupied spaces but they look bad. I have used these until recently, but seeing boxes opened in the market where only clean soft light brown paper was used I was cured of the newspaper business.

The statement has often been made, and it is a truth that is not told too often, that one-half of the skill in producing flowers lies in the picking, and this is certainly one of the greatest points in carnation culture. Some varieties must remain on the plant until they are fully developed; this is especially true of McGowan and Wm. Scott; neither of these are fit to pick until they have been open on the plant for nearly a week, and flowers of the McGowan which at first were badly doubled up, or with the petals recurved, after remaining on the plant five days became quite flat. This point I have tested this fall by marking quite a number. There are quite a number of varieties which must be picked much sooner; among these are Daybreak, unless grown in a comparatively dark house, and Albertini. Both of these sorts fade if left until fully open and both will develop finely after picking.

Now these points may seem stale and out of place to many of my readers, but these minor details are the essential elements (in part) which go to make a successful grower. Envious reputations are won only by careful and close application to every branch of the trade we may be following, and no one point should receive more attention than the picking and packing of our production.

CHARLES H. ALLEN.

THE RETAIL TRADE.

The Arrangement of Flowers.

XIII.

A word from one outside of the profession, but one who buys flowers and floral decorations, may not come amiss in this series of articles upon the arrangement of flowers for various purposes.

As a florist's customer I can only speak from the artistic standpoint and can not attempt any suggestions to help the grower and dealer dispose of material to the best advantage.

I like best flowers used with their own natural foliage, with stems cut of generous length and always unwired—wiring stems is fatal to artistic effect.

In arranging flowers for house or dinner table decoration instead of a set piece made in the florists' work room why not send some one of taste, a young woman for instance, to arrange and place the flowers where they are to stay? Originality is certainly to be desired; so instruct this person of taste to make no two arrangements alike or so nearly alike that

one appears a copy or duplicate of the other. Avoid the error most florists fall into in making the arrangement too stiff, formal and professional looking.

Another suggestion I should make to florists is to provide a greater variety of flowers from which to choose. We have roses, roses, roses, with the same ferns which look as though bought by the yard or bushel. I prefer flowers in their season. I do not like sweet peas in February and should not like chrysanthemums in June.

Cut flowers are at their best placed in undecorated glass vases, the mouths of which are smaller than the part holding the water, as shown in Fig. 1; or a cylinder shaped jar of glass always shows the flowers to good advantage; (see Fig. 2) the stems showing through the clear glass, and the

Fig. 1.

foliage that which belongs to the flower. I like too for coarse flowers a rough vase of pottery or terra cotta of neutral shade, always without decoration. Decoration on a vase used for cut flowers spoils the artistic effect and detracts from the flowers. I have found the flaring vase which tapers down to a point as seen in Fig. 3, the most difficult of all to arrange. The very prettiest and most effective that I have ever seen

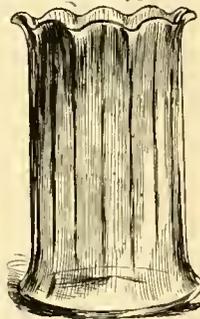

Fig. 2.

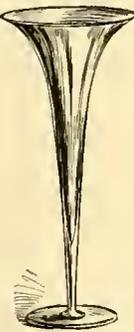

Fig. 3.

is a plain dark green globe-shaped glass vase (Fig. 4), which I have found in four sizes and wish very much I could find some of still larger size than these. The rich green harmonizes perfectly with everything I have put in it. Flowers look well arranged in silver dishes and vases, if the vases are plain, of simple outline and artistic in design.

The florists in arranging dining tables every fall at the flower show make some mistakes which trouble the lady judges in awarding prizes. All dinner table decorations should be either very low or very high—low enough to look over from one side of the table to another, or high enough to look under. Nothing is more annoying to one seated at table than to dodge about a mound of flowers to catch a glimpse of one's opposite neighbor.

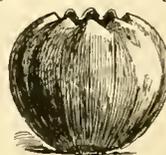

Fig. 4.

Another mistake is in using colors which do not harmonize. Where ribbons are used they must always match either the flowers or the foliage. They may be a lighter or a darker shade, but the color must be the same. Gilt and tinsel are in bad taste, and in fact I have never seen either tinsel, gilt or ribbon used on a dinner table with good effect.

Another common mistake is in crowding the table with flowers and ferns, leaving no place for the service.

The prettiest dinner table decoration I

have ever seen was this. The table was long enough to seat twenty-four guests; it was six feet wide and had oval ends. A margin of eighteen inches of pure white damask was left all around the table upon which to lay the service, and a set of pans an inch deep were made at the

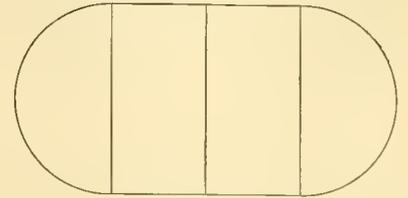

Fig. 5.

tinsmith's to entirely cover the oval center left after reserving the eighteen inches of margin. These pans were made in sections so that they could be used again upon smaller tables. The pans were filled with little plants, ferns, palms, lycopodiums, etc., none of which were over nine inches high. The shallow pans being in sections were readily arranged first, and then placed upon the table. They also protected the table linen, for the little plants were growing in their own earth and were simply lifted from the pots and arranged in the pans with the higher ones in the center and the lycopodiums, etc., drooping over the edge. In among these were placed some delicate cut flowers, violets, lilies of the valley, small roses, etc.

The only objection to this arrangement was its expense. The day following the dinner the plants were taken back to the greenhouse unhurt by exposure and unchecked in their growth. The whole arrangement was simple, natural and refreshing, and appeared a little garden of thrifty growing plants. It did not obstruct the view across the table.

The late Celia Thaxter in her charming book "An Island Garden" tells how she arranged cut flowers in her music room. She did it herself every day and in this manner: At 4 o'clock in the morning she gathered her poppies when they were covered with dew, and this ensured their keeping fresh in water for several days. A faded flower was never seen in her vases. If my memory is correct she had thirty-seven vases, all of which she describes—this one for nasturtiums, that one for poppies, several for sweet peas and so on. She liked best glass vases which showed the stems through. She was an artist as well as a true lover of nature and plant life, and the arrangement of flowers in her rooms gave her artistic instinct full play and showed a love of each individual blossom that comes only to those who love plants and flowers well enough to take care of them. She planted and raised her own flowers; no hand but her own touched her garden after it was once spaded in the spring. Can one imagine such a flower lover running an iron spike through the heart of a carnation or binding a lily of the valley to a toothpick with a bit of wire, or combining tulips with maidenhair ferns, or sticking stems of flowers into a basket of moss?

Stiff, set, wired floral pieces belong to a past age. The best people growless artificial and more simple in manner all the time, and consequently like to be surrounded by natural and graceful forms rather than by that which is formal and conventional. A single fine chrysanthemum in a glass vase showing the clear water and fresh stem, two or three fine specimens of any flower in season, or one fine rose—any of these used with its own

foliage is enough decoration for a dinner table for an informal occasion.

The florist who will draw to himself the largest and best patronage is he who will sell *fresh* flowers that have not been on ice, who will employ people of taste to arrange his flowers in the houses of his customers, who will keep always a variety of flowers and who never overcharges his patrons. FRANCES M. GLESSNER.
Chicago, November 3, 1894.

Best Ice Box for Retail Store.

I would like to be informed as to best kind and size of ice box for retail florist store.

I would also like to know what you think of a white interior for store. Do you think color would be better?

READER.

As to size, the needs of your business must largely determine that. The larger the stock of flowers you carry in stock the larger and greater must be the capacity of your refrigerator. But it is not merely for the preservation of your supply of stock that an ice box is needed. We must provide room for made up designs, etc., which often are made up the night before they are sent out. It is therefore advisable to get a box of good size even if your business be small. Let us say 6 feet wide, 4 feet deep and 8 feet high. This would give you ample room for stock for a run of ordinary business and besides leave room enough to store away a quantity of made up pieces. Under no circumstance would we advise a small box for sake of economy. Unquestionably a large box consumes more ice than a small one, but not proportionately. The compartment for ice should be large enough to hold at least 300 pounds of ice; the larger the pieces the longer they last. The inside of the box should be provided with adjustable shelves, made of slats (to allow a free circulation of air); in that way you are enabled to use your space to the best advantage and to its full capacity.

To illustrate: Suppose the box we have in mind has an ice chamber in the upper left hand corner 4 feet wide and 3 feet high; this would leave you a clear space of $4\frac{1}{2} \times 3\frac{1}{2}$ and $3\frac{1}{2}$ feet deep (inside measure) underneath. There you may keep your tall flowers in vases, such as Beauties, lilies, etc. This also will accommodate made up designs. On the right hand side you have a clear space from the bottom up past the ice chamber (which takes up about $\frac{2}{3}$ of the width on top) to a height of 8 feet, and $2\frac{3}{4}$ feet in width. Nail your cleats on either side 6 inches apart in order that you may be enabled to arrange your sliding shelves at whatever height you want them. If you carry your stock on trays have these made to fit your space on the shelves. If in vases you arrange the distance between shelves accordingly. For tall pieces such as a broken column you will find this section handy. All you have to do is to remove the necessary shelves and your room is provided.

A box to be used only for preserving stock should have no glass front; the flowers will keep their color better in the dark. Some dealers have in addition to an ordinary stock refrigerator a glass front show box. The inside of such an affair is best provided with plate glass shelves and the flowers arranged on these for display. For keeping qualities, however, such a box can hardly be commended.

There are two essential points you must bear in mind: First, note that the air in your box is not too dry, and secondly, don't have it so cold as to chill the flowers. Authorities differ as to the degree at which the temperature should be kept in order to get the best results. From our own experience we should say keep it as nearly 40° as you can.

As to the second question, we are of opinion that the interior of a flower store in white is the most tasty. Either white or delicate cream. A few touches of gold here and there will add elegance, but don't overdo it. And don't use common paint, which soon gets dingy. Enamel paints if applied in three or four coats will clean easily and look fresh for a long time:

Miscellaneous Seasonable Hints.

As soon as the chrysanthemums are cut, and Thanksgiving will see most of the benches cleared off, there will be a great deal of moving in and around to be done. With me a leading article to fill up the benches is the Easter crop of *Lilium Harrisii* and *longiflorum*. They have been doing all right in a cold frame, if well protected, but a hard frost does them no good. Hardy roses that are well established in boxes or pots will also fill up the benches, not H. P. roses that have just been received, they won't stand this moderate forcing because they have had no ripening process to prepare them for it, and have no working roots to support them.

What do you do with the soil from the chrysanthemum benches? It's a poor plan to leave it on the benches, a very unsatisfactory thing to set plants of any kind on and this puts the soil into such condition that it is useless for a year. If you made your soil for the "mums" of good fresh rich soil as directed in these columns and added a good mulch of manure in September this same soil will be plenty good enough for many plants in early spring, long before you can get at your frozen soil pile outside. Store away all you can of it in your sheds or under cover outside. When March and April comes you need a great lot for geraniums, fuchsias, coleus, cannas, and many other plants for which this chrysanthemum bench soil is amply good enough.

As chrysanthemums fade away you will be looking for Christmas crops. There is very little demand for tulips as early as Christmas. If you must have them the Duc Van Thol are the ones to bring in in a steady temperature of 70° and a heavy shade (I use cheese cloth); they can be forced in about 20 days. The best of the really fine tulips for very early forcing is *Chrysolora*, which I have had with 10 in. stems by the 25th of December, but as before said there is little demand for that sort of stuff before the middle of January. Endeavor to get all your paper white narcissus in for the holidays, and if possible give it a week in a moderate temperature, and the flowers will be much larger and more satisfactory to the buyer. There is not much in this flower except at the holidays, when everything goes. You should have a large lot of Romans for Christmas, and another lot for New Years. There has not been much profit for the grower in these of late years, but they always pay best in early winter.

When spiræas are received don't let them lay around in the box. Unpack and pot as soon as possible; before pot-

ting soak the clumps in a tub of water for a few moments, they are often very dry and the roots are so compact that if potted as received the ordinary watering scarcely wets the inside of the mass of roots. Don't attempt to force Dutch hyacinths for the holidays; it can't be done in this country with any success, and if it could it would not be desirable.

A very important flower at Xmas is lily of the valley. If you have the most favorable place where the bottom heat, or heat of the sand is 90° and the top 60° you can get 50 per cent. of the new crop to flower, but the cold storage pips are the best to depend on for holiday trade. Even if you depend on the newly arrived pips it is almost necessary to grow some of the cold storage stuff for the leaves alone, in which the very early forced new crop is sadly deficient.

Hybrid perpetual roses that have arrived from across the Atlantic should be potted firmly at once. Cut back from 9 to 15 inches from the pot, and plunge in some material in a cold frame, or if you are fortunate enough to have a house where the thermometer ranges from 35° to 40° that will do better. If you don't have pots ready for lilacs when received you can heel them in in a pit or frame and pot them as you bring them to force.

Winter has about come in our part of the country, so don't delay any longer in covering your tulips, narcissus, and other bulbs with about three inches of litter from the stable. I allude to those that are in flats or pans for forcing; no harm in there being a little frost in the covering of earth, it will keep them from growing too long, and don't put the manure on too heavy or they will be too warm and run up.

If you have not sown cyclamens sow at once. Just cover the seeds and keep in a temperature of 50° to 60° . As a house plant these will never go out of fashion.

Once more, don't in your hurry forget to fumigate the lilies; much of their future trouble is due to neglect of smoking in their early state. WM. SCOTT.

New York.

The quantity of flowers coming in has been somewhat reduced, and results in general are more satisfactory. The recent football games have brought about a great activity in violets and students and good violets are securely anchored at \$2 per hundred and upwards for fancy stock, of which there is more than the usual proportion. Carnations are comparatively the most abundant flower in the market at present, but they seem to hold pretty firm in price and withstand fairly well the persistent hammering of the Greeks at the 34th street market, a place where these noisy gentlemen swarm like bees. The three new seedling carnations which Mr. J. N. May exhibited at the Farmers' Club show, are creating a decided sensation among the high class stores. In roses American Beauty keeps far in the lead, and the number of fine specimens coming in is very large. Nothing is heard of the American Belle in this market. Meteor, the Pierson Company's great specialty, is in fine shape as received from this establishment and other large growers. There are a good many chrysanthemums still offered, but in the majority of cases the blooms are dragged in appearance and find a poor sale. Notable exceptions to this rule are some blooms of Niveus, which E. C. Horan is receiving from Dailedouze Bros., which are simply superb, and a very late flowering seedling

with pinkish flowers of remarkable substance and depth which Julius Roehrs is sending to Theo. Roehrs. Roman hyacinths, paper white narcissus, *Harrisii* lilies and lily of the valley constitute the bulbous stock now available. *Harrisii* sell well, but the rest go rather slowly. *Freesias* will soon be added to the list.

The retail stores appear to be well supplied with funeral and wedding work, but there is some complaint that transient trade is not what it should be, and it is transient trade that most truthfully indicates the condition of business. One of the most beautiful designs seen here for a long time was a large standing column of *Cypripedium* insigne in Thorley's window. Its simplicity was one of its best points. Galax leaves are being used more than ever in made-up work. A wreath of this beautiful foliage finished at one side with choice roses or lilies, and wide ribbon is lovely and will harmonize with any surroundings. Sunday trade seems to be on the increase. The large stores are all open on Sunday forenoon, and some of them all day, and they find plenty to do.

Many of the clerks in the retail stores are in a crippled condition from poisoning of the hands resulting from rose thorns. It is believed that the poison comes from the substances used by the growers as insecticides and fungicides, and the trouble seems to be worse this year than ever before. It would seem to be in order for the growers to mix something of an antiseptic nature with the water in which they stand their roses after cutting by which the poison might be neutralized.

The array of florists' wagons on 28th street every morning now is something gorgeous to behold. Even Tierney, who has up to the present time regarded his ordinary express wagon as sufficiently stylish for the transportation of J. Weir's purchases over to Brooklyn, has now caught the infection, and it is said proposes to paint one side of the wagon white and the other side dark green so that it will harmonize with the front of the store opposite which it may stand.

The wholesale supply dealers report the sales of green as unprecedented. Holly, too, promises to have a bigger run this year than ever.

A useful and salable little specialty that Herman Rolker puts up for retail florist trade is the Acme Flower Food. He promises a new metal pot label in the near future.

August Rolker reports a satisfactory sale for Dutch roses at auction this season, orders for quantities at limited prices coming in freely from the large nurseries.

The list of Broadway florists is about to receive a gratifying addition, Miss Rose Harris, late of 23d street, who will locate at No. 1146.

E. B. Lucatos opened a pretty store at 301 Columbus avenue on Thanksgiving Day.

Other new establishments are J. M. Jenny, retail, at 19 West 28th street, and G. E. Bradshaw, wholesale, at 746 Sixth avenue.

In town: Carl Jurgens, Newport, R. I.; H. H. Battles, Phila., Pa.; and Mrs. J. C. Vaughan, Chicago.

The annual dinner of the Florists' Club will take place at the "Arena" on January 19.

The Madison Rose Growers' Club are elated over the success of their first exhibition.

You can never invest \$2 to better advantage than in a copy of our trade directory and reference book.

Philadelphia.

The "mum" season of 1894 is going, going, and almost gone. The hustler with his big boxes is tired of his job, and from every direction the growers, the commission man and the retailers all are unanimous in their wish that the stock may run out as soon as possible. Over production we believe to be the cause of all the trouble, there have been entirely too many flowers on the market, and if the growers are to be believed in many instances half the crop has been left to wither on the plants. Comparatively little shipping has been done this season, while in former years the out of town demand was a large factor. Mr. Harris was always a large shipper, but says that his best customers have now houses of their own. George Craig says the florists would have to do twice as much trade during the chrysanthemum season than at any other time of the year to use up the stock offered.

The varieties now in the market are Lincoln, Mrs. Battles, Eva Hoyt, Wanamaker, Harry May, L. Canning, H. Balsley, Maud Dean, E. G. Hill, Cullingfordii, prices range from 50 cents to \$2 per dozen, the majority selling at from 75 cents to \$1.50. Beauties are now in good demand and the price is up, \$3 per dozen being asked for good stock. Messrs. Lonsdale, Burton and Heacock are sending in the bulk of them. Mr. Burton is also cutting some fine Belles. All the large teas are now in good shape and sell for \$3 to \$4, with \$5 and \$6 asked for extra Testouts and Kaiserins. Butler of Chestnut Hill is cutting some extra fine La France. Perles, Gontiers, etc. bring \$2 for the best; \$10 to \$15 per thousand for an assortment is the fakir's price. Carnations in a great variety of kinds are as fine as could be wished for, the majority bring \$1 per hundred, while a few extra command \$1.50. McGowan, Daybreak, Wilder and Portia are the leaders. Double violets are in great demand at from 75 cents to \$1 per hundred; there are not near enough to go round. Many of the growers send in a lot of half opened buds tied up in bunches of 25 buds to a bunch and expect good money for them; they have neither beauty nor fragrance and are a disappointment to everybody who handles them.

Trade has been livelier the past few days and stock of all kinds is in better demand. W. F. Murray of Atco, N. J., is sending in some fine mignonette, the best we have seen this season.

House plants are moving better, and from now on until after the holidays there should be a good demand for this class of stock. W. K. Harris has azaleas in flower and has them fine. Mr. Harris has a number of Chadbourn Automatic ventilators in use and speaks very highly of them; he says it is the most valuable device for greenhouse men ever introduced; it works perfectly and keeps each greenhouse at the temperature required. His son William suggested a check valve being placed below the machine so that when the house was being watered with the hose the pressure would remain the same, this is a valuable improvement and is to be placed on all the machines now being sent out.

The following programme for the meetings for the next few months of the Pennsylvania Horticultural Society has been mapped out and the gentlemen whose names are attached are to have charge of the subjects assigned: Decorative plants and flowers, Robert Craig and Edwin Lonsdale for the December meeting. Jan-

uary, farm and dairy, Col. B. Landreth and Jason Sexton. February, forestry and fruits, W. H. Moore and J. G. Gardner. March, insects and fungoid diseases, W. F. Dreer and Dr. Goebel. April, vegetables and small fruits, W. A. Burpee. May, plant foods, Frank Sempers.

Mr. Edwin Lonsdale has added to his laurels by being elected a delegate to represent Philadelphia county in the State Board of Agriculture.

Mushrooms are selling for 75 cents, hot house tomatoes 50c. per pound. K.

Chicago.

Thanksgiving trade was good. This is the universal verdict by wholesale and retail dealers. The supply of stock, particularly in roses, was rather light and in quality hardly up to the average. American Beauties averaged fairly good in quality and as usual were in brisk demand at top prices. First quality brought \$4.00 per dozen at wholesale and shorter stemmed stock \$2 to \$3. The market sold short early in the day. The average price for the smaller varieties of teas was \$4 to \$5. Most of the following varieties went at this figure: Perles, Mermets, Brides, Niphetos and Bridesmaid. In most of this class the quality was very poor, except Brides (some choice selected stock of these going as high as \$7), Testout and Kaiserin (the former very fine at \$7). Red roses were short in supply, the price being forced up under pressure of an active demand from \$5 to \$7. Good Woottons, in sympathy with Meteors, ruled firm at \$6. In carnations the supply was about equal to demand except white which went slowly, a few lots being left unsold. The demand was heaviest for red and Tidal Wave; average price for good stock \$1.50, fancy \$2. The supply of violets was quite abundant, much larger than was anticipated. In the early part of the week there was practically no stock received on the market, and prices were forced up to \$2 per hundred, at which figure the market opened on Wednesday. Sales however at this high figure were rather limited, really first class stock only found buyers. Prices gradually dropped to \$1.50 and in some instances to \$1. Mums were very plentiful, except first-class stock which was in active demand at from \$15 to \$20. In poor to medium the market was decidedly overstocked and lots of stuff had to be sacrificed at ridiculously low figures. *Harrisii* was plenty and of average good quality. Prices steady at \$1.50. Romans, in fairly good supply, went slow at \$4, valley at \$4, and a few narcissus (paper white) at the same figure. Stevia, of which there is an unusually good supply at present, sold at 50 cents a bunch. Mignonette brought \$2 to \$3.

Although some of the growers apparently indulged in the time-honored practice of picking to some extent, yet it must be admitted there was less of it this year than formerly. Still in the case of mums and violets in particular, there seems no doubt that better prices might have been realized if the bulk had not been held back. On Monday and Tuesday the retail boys were skirmishing around at a lively rate for just this kind of stock but none could be found. But this is the same old story year after year. Will some of our friends among the growers ever learn a lesson?

All of the wholesale firms who do a shipping trade report a heavy business in this line. In a number of instances quite an increase as compared to former years was noted, prices being fully up to last season.

The local retail trade was very quiet up to noon on Wednesday but in the afternoon and until closing time on Thursday the demand was quite lively and stock was disposed of to the last flower and at prices which ought to net a satisfactory profit.

The Art Floral Co. (Hilmers) will open a new store at 2202 Michigan ave., about December 1.

W. Palinski has opened a retail store corner W. Adams street and Western avenue.

K. Wehn of New York stopped in Chicago this week on his return from a trip to California.

Mr. E. H. Libby recently passed through the city on his way east.

Dean Hole delivered a lecture on "Bores and other imposters" at Central Music Hall last Monday, and on Wednesday evening he was given a reception at the residence of Geo. M. Pullman which was elaborately decorated with plants and flowers for the occasion. Chicago society was charmed by the Dean's fund of anecdotes of noted Englishmen whom he had met and his genial humor.

St. Louis.

While show matters are over for the present season, there is never a gathering of two or three members but what the subject of future shows is broached and considerable talk indulged in regarding one next season; so the possibility of the shows being continued is somewhat brighter than immediately after the close of the last display.

Quite a few of the store men have been taken in by a smooth talking, well dressed chap representing himself as an artist. With the majority, however, it has been only at the expense of some cut flowers and a little time. His mode of procedure was to enter and introduce himself, giving an address in the fashionable part of town, represent himself as an artist from Paris here to paint several portraits, giving names of prominent people as the sitters, and make an appointment with the florist to examine his rooms, after having given him a fifty-dollar decoration. After talking the matter over, giving size of mantels and number of arms on chandeliers he would casually inquire the price of several chrysanthemum flowers, and when told ask that they be given him, he being short of change, and would pay at the appointed meeting next day. In the majority of cases owing to the joy over the decoration order the flowers were handed out, and when the given address was hunted up next day it is needless to say was found not to exist.

The second annual flower show under the auspices of the Kirkwood Improvement Society was held in the Armory hall at Kirkwood on the 15th and 16th. The affair was very well conducted by the ladies in charge and gave universal satisfaction. The hall was nicely decorated and the plants exhibited were a credit to the amateurs who grew them. The principal and most attractive group in the hall was one of araucarias exhibited by D. S. Brown of Brownhurst; a table of cactus also exhibited by him attracted much attention. The only cut flower exhibitors were professional growers, and they exhibited more as an advertisement than otherwise. C. Young & Sons Co. exhibited about sixty flowers in great variety, all correctly labeled, and were awarded first prize. Robert F. Tesson showed a table of roses and was awarded first prize also, being the only exhibitor in that class. A special prize was offered for

"best specimen blooming plant for house cultivation," and limited to competition by amateurs. It called out a strong showing of large house plants and was finally won by a Begonia metallica. Refreshments were served during the afternoon and evening, and the second day wound up with a dance for the young people. All connected with the show express themselves as well satisfied, and the chances are that it will be continued in the future.

On the 20th Mr. Harry W. Chandler, Jr., head of the Chandler Floral Co., was married to Miss Sallie Alexander Jordan, daughter of Dr. R. M. Jordan. The bride wore white and carried a bunch of white orchids. A reception was held after the ceremony at the house of the groom's mother, which was prettily decorated with smilax and cut flowers. R. F. T.

Buffalo.

There has been nothing of great moment to disturb the "even tenor of our way" since you last heard from the Queen City of the Lakes. I wonder how many queens there are; anyway, if we are not the only city claiming that proud title we shall soon be preeminently the electric city. For it is promised that within a year almost every conceivable operation requiring physical exertion will be done for us by the mysterious fluid. You walk up to the hat rack, push a button and instantly you are enveloped in overcoat and hat. I wonder whether this mighty power will help violets to bloom. There has been no flower so scarce as violets for the past three weeks. It seemed a month ago they would be very plentiful, but from nearly all growers in this neighborhood there has been a halt in their progress. Many thousands more could have been sold. Carnations are coming in about as wanted. Much less favorable weather has shortened up the supply of roses, still there is no famine in them. Most of the chrysanthemums are cut, yet there are a few houses looking well for a later market. The varieties that are in prime order here yet are Lincoln, Balsley, Roslyn, E. G. Hill, Mrs. Jerome Jones and a few others.

There has been a good number of small parties, and one last week of more than ordinary brilliancy. It was a wedding, and on our fashionable and select North street. It was one of those good old fashioned orders, "Make a fine job of it," and no questions asked. W. J. Palmer & Son did it up in fine style.

There have been a few visitors here of late, including a gentleman by the name of Bayersdorfer; several of the florists seemed to know him and said he came from Philadelphia. Mr. Dimmock of St. Albans gave us a complimentary call, as also did Mr. Walter Mott. Mr. Mott did not get off any bon mots, but he went off with several good orders, which suits his constitution quite as well.

Your correspondent could not resist the temptation of making a short visit to Toronto in company with a few friends, including Mr. Peter Crowe of Utica (the champion bowler of central New York). Your Toronto scribe is such a modest man he will I am afraid scarcely like to tell you of the great excellence of their show, and at the expense of being considered a liberal dispenser of taffy I must be allowed to say that for the space covered by exhibits it could not possibly be beaten. The "mums" of Dunlop, Nathan Smith & Son, Mearns and others were grand, while the roses of Harry Dale, Spears & Muston and Dunlop were such

as the writer doesn't see anywhere else. The artistic arrangement of the floor was well conceived and a great success. The beautiful Philadelphia chrysanthemum was exhibited there, but it was in poor shape, and nothing like the grand flower I saw in Chicago. W. S.

Boston.

Thanksgiving Day has helped to stiffen up prices a little, but there is no such boom as we used to see. Carnations are abundant enough to prevent a very decided rise in prices with the exception of the very fancy varieties, and the rose growers appear to be content to send their cut in daily rather than risk trying to hold it for a Thanksgiving Day rise, which shows their good judgment. Violets have stepped up a little this week and if extra good command \$1.25 to \$1.50 per hundred. Single violets are being sent here daily from Philadelphia and they find a rather slow sale at about one quarter the price of double.

Roses from Waban Conservatories are very fine. No doubt some of the best of them are from the grafted stock which Mr. Montgomery has been planting extensively and thoroughly believes in. After looking at one of his benches of Bride grafted on Manetti one is constrained to agree with him. There are some indications of the troublesome "yellows" on Mme. Cusin. Mr. Montgomery ascribes this condition not to the soil but to too much water and heat. The first azalea plants in flower and Harrisii lilies came to this market on November 20 from Walter Butler of Readville.

Mr. P. O'Mara, president of the New York Florists' Club, will read an essay before the Gardeners' and Florists' Club of Boston on the evening of December 4. His subject will be "The Influence of Florists' Clubs on Horticulture."

The oldest daughter of Wm. Robinson is seriously ill with scarlet fever. A daughter of M. H. Norton has been down with diphtheria but appears to be recovering now. Ed. Welch of Welch Bros. is confined to his home with a severe attack of rheumatism.

Thomas Flanagan, for many years a florist of Malden died on November 26.

The Water Hyacinth.

Replying to the inquiry as to best method of handling Eichhornia crassipes major during winter, would say that it is one of the most convenient of all water plants to handle either summer or winter.

If the stock is strong and clean, and the object simply to carry over winter, place the same in a tub (half a kerosene barrel) with clean water only, and keep in a greenhouse with minimum temperature of 50°. The plants will bear partial shade during the day with no ill effect, thus allowing the tub to stand partly under the bench. To keep the plants growing place in a house having 10° higher temperature, but give all the light possible or the stems will become elongated, and thus destroy the attractive feature of the plant. In a warm house red spider is very apt to attack it, otherwise it is free of insect pests. Should the plant become sickly and pale green to yellow in color put some soil in the tub, about six inches, and allow four inches of water. As soon as the roots penetrate the soil a marked difference will be noticeable in the plants, and they will make rapid growth and flower.

WM. TRICKER.

Musa Ensete Fruiting.

"E. R. M." wants to know if Musa ensete can be grown to fruit in a hot-house. Yes, it can, if given plenty of room, heat and moisture, but who would want to give it room for the fruit, which is much inferior to other species. M. Cavendishii, the species generally grown in hothouses for its fruit grows freely, does not want a very high temperature, and its fruit is of the best. The time it takes for Cavendishii to fruit depends on the condition under which it is grown, a strong sucker with plenty of heat and water and a rich soil will probably fruit in three years, and he who has ever tasted a ripe golden banana fresh from the plant will think very little of those grown in the West Indies, picked perfectly green and ripened partly in the hold of a vessel and finished off in a northern loft or cellar.

W. S.

Germinating Clematis Seeds.

Will some reader of the FLORIST tell me the best method of germinating clematis seeds?
CONSTANT READER.

PITTSFIELD, MASS.—At the recent chrysanthemum show of the Gardeners and Florists' Club of Berkshire County Mr. R. G. Hanford of Norwalk, Conn., showed some fine roses, including Kaiserin Victoria, Bride, Perle and Papa Gontier, also a group of decorative palms.

YOUNGSTOWN, O.—Last Sunday morning the private greenhouses of John A. Logan Jr. were totally destroyed by fire. An incompetent man that believed in large fires to guarantee long hours of sleep was the cause.

OUR trade directory and reference book for 1894 contains 270 pages of information of real practical value to every one in the trade. Price \$2.00.

SITUATIONS. WANTS. FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By first-class cut flower man. Apply to
D. C. JONES, 88 State St., Chicago.

THE Agricultural Department at Washington is now using seven of the Brown bag-filling machines in the seed division. It is estimated that each machine will do the work of ten or more women. The machine is fed with seed through a large hopper. It measures the seed, opens the packet, dumps the seed into it, glues the open end, closes it up, and discharges the filled bag ready for mailing. It will handle any kind of seed, and packets from 2x7/8 to 4 1/2x6 inches in size. Thirty thousand filled packets a day of ten hours is its normal capacity.

WE HAVE received from the author, Prof. F. M. Webster, a pamphlet on the development of *Fidia viticida* Walsh, an injurious insect affecting the grape. Prof. Webster, who is known to florists through his researches regarding black spot on roses, displays keen insight into the life history of this obscure insect, and the pamphlet will possess much value in economic entomology.

Hoya Carnosa Fruiting.

A correspondent from Kirksville, Mo., says *Hoya caruosa* is in fruit in her greenhouse, and wants to know if it is not a very uncommon occurrence. It is rather seldom seen in fruit, yet on old plants fruit is often seen. A plant that is closely allied to it and belongs to the same order (*asclepias*), *stephanotis*, is not often seen to fruit, yet a plant in this city of the latter bore a number of fruit two years ago. Mrs. — says her plant was propagated from a layer; they can be propagated either from cuttings or layers, but the latter will give the stronger plant.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

PASSED CHICAGO, west bound: J. M. Kimberlin and son of Santa Clara Cal. Mr. K. still has a little Red Glohe left.

DIFFERENCES which have arisen between a Paris house and one in St. Paul are it is reported to be adjusted in the law courts.

THE RED CLOVER is now the state flower of Vermont. It was selected by over 9,000 out of the 17,000 votes of ladies of the state, and was then officially adopted by the state legislature.

CALIFORNIA WONDER is a new cauliflower, heading well there even in the hottest summer weather, larger than ordinary sorts, and is being shipped east from Coast in car lots as far as Denver.

MR. KIMBERLIN of California believes that an eastern seedsman not a subscriber to the FLORIST suffered a loss of at least \$1,000 because he did not have the early information of seed crop conditions contained in its columns. The moral is plain—subscribe.

L. L. MAY & COMPANY, nurserymen, florists and seedsmen, of St. Paul, Minn., are offering space in their catalogue for advertisers. They state, however, that nursery, florist and seed advertising will not be accepted. These lines are rigidly excluded, but they invite with all warmth and attention agricultural implement and other advertisers.

TO THE AMERICAN FLORIST:—It seems to me that with a united action of the seed trade we might succeed in having Uncle Sam stop his seed shop. The free distribution of seeds was never the intent for which the department was created. It was for "the testing and introduction of new and rare seeds and plants," in which it has proved a grand failure. The American seedsman can beat U. S. at that business. The next thing was to open a seed department and run opposition to the seed trade of the country. Why does the government not start a book store, or a jewelry store, and run that in opposition to the legitimate trade of the country, that the Senators and Congressmen may supply their constituents free through the department, as is the case with seeds now, and so give the seedsmen a rest. No doubt some enterprising member of those trades would succeed in unloading on the government all the inferior made and faulty goods in their line, and the men and women now employed in the seed shop, who are held there through the influence of those who vote for appropriations to keep them there could be continued, only let up on us, and let us have a change. AN OLD SEEDSMAN.

At the Chrysanthemum Show.

Little Edith, anxiously—"Can't they do anything to those big flowers, mama, to keep them from getting all ravelled out?"

Short-sighted barber, absently running his fingers through Cholly's chrysanthemum—"My friend, your hair needs trimming."—Chicago Tribune.

Clematis Jackmanni.

One year, nice dormant stock, for potting up for Spring sales, \$2.00 per dozen; \$12.00 per 100. All home grown.

New Notes.

QUINCY, ILL.—Steps are being taken towards the organization of a Florists' Club here.

JANESVILLE, WIS.—Walter Helms has begun the erection of a one story brick store 22x50.

NEW ORLEANS.—The New Orleans Hort. Society has decided to have a spring exhibition in April.

BURT EDDY, general agent for J. C. Vaughan, left last Wednesday on his annual trip to the South Atlantic coast.

BROCKTON, MASS.—H. P. Allen & Son have recently started in business here at 41 Glenwood street. They intend making a specialty of carnations.

OSKALOOSA, IA.—W. E. Hearne, until lately foreman for the Kemble Floral Co., and formerly foreman for J. M. Jordan of St. Louis, has accepted an offer from a Belgian firm who wish to introduce the American system of growing roses and other cut flowers. He sails from New York about December 1.

FINNLEY, O.—Fire did \$300 worth of damage to the greenhouses and stock of M. B. Patterson November 3. The fire started in some wood work near the furnace. No insurance. Mr. Patterson met with another serious loss in plants last winter through failure in the supply of natural gas used for fuel, a house of plants being frozen.

DETROIT, MICH.—The park commissioners intend establishing an arboretum on Belle Isle, Prof. Plumb of the Agricultural College being delegated to select a suitable location. The first site picked out is that now devoted to picnic and baseball grounds, which is naturally well wooded, but public opinion is against this, and some other location will be found. The Irvine Co. has been holding a chrysanthemum show at 220 Woodward avenue.

SAN ANTONIO, TEX.—The Oakland Greenhouses, formerly owned by M. C. Long, at 216 Oakland street, have been sold to Mrs. Sam Moverich, who has removed the buildings, stock, etc. to her former place of business at 309 10th street. With the greenhouses Mrs. Moverich formerly had this now gives her one of the foremost establishments in the city, which is all heated by steam. The establishment will continue under the name of The Oakland Greenhouses. Mr. Long will remain in the city for the present but will not engage in floriculture.

So. FRAMINGHAM, MASS.—The Framingham Nursery Co. have made enviable progress in the development and laying out of their nursery grounds, which comprise some twenty acres of land, originally anything but tempting in appearance, but now through energetic and judicious labor as good planting ground as can be found anywhere in the state. One greenhouse of best construction, 18x100 has been erected and a packing house 25x125 is under way. Hardy stock will be the specialty. Chas. B. Merrell is president of the company, H. B. Clewley, treasurer and Wm. B. Whittier general manager.

When you write to any of the advertisers in this paper please say that you saw the advertisement in the American Florist.

The Greatest Prize Winning Chrysanthemum of the year.

"PHILADELPHIA"

NEW CHRYSANTHEMUMS.

MRS. W. H. RAND.

HOLLY

It is conceded that the successful delivery of perishable stock in the best condition exactly when demand is active is secured only as the result of considerable experience and close study of all the controlling conditions. During the past ten years we have studied these conditions and have the experience. We have faith that we can supply "First-Class Stock on Time," and to prove our faith by our works, on all orders given us in season, we will guarantee arrival or no pay. We attempt no competition in price with stock which has never yet arrived, or—arrived after Xmas. "A Case of Holly in front of the store is worth four (4) on the cars."

VAUGHAN'S SEED STORE.

CHICAGO,
146-8 W. Washington Street.

GREENHOUSES, WESTERN SPRINGS, ILL.

MRS. WM. H. RAND.—Certificate. A distinct variety of Japanese type, in color a remarkably rich yellow. Petals fine, long, twisted and irregularly reflexed, making it resemble a tangled mass of large gold thread. Highly commended by the judges at Chicago, and pronounced the most attractive and strikingly graceful flower at the show. Trade price, 50c.

CRYSTALINA—Certificate. Snow white, medium size flower; snow-ball type, quite distinct and early. Trade price, 35c.

JAYNE—Special mention. Dark shaded rose, high built, regularly formed, incurved blooms. Very strong stem, first-class foliage, well up to flower. For exhibition or pot plants highly commended. Trade price, 35c.

MRS. MOSES J. WENTWORTH.—Special mention. Large rich yellow, full and deep, strong, compact habit; an improvement in the Chinese class. Trade price, 35c.

BURT EDDY—Special mention. An immense flower for exhibition. Full and double. Stem and foliage good, silvery rose and purple; an improvement in this class. Trade price, 35c.

WILLIAMS & SONS CO., Batavia, Ill.

New Notes.

CHARLESTON, S. C.—Arrangements are being made for a floral parade in this city in the near future.

LANCASTER, PA.—Dr. I. H. Mayer & Sons are adding two new houses, one 10x50, and one 20x54.

HUDSON, MICH.—C. H. Peck has opened a down-town store at 77 Main street, and has recently added a new house 20x70.

IOWA CITY, IA.—Jas. Aldous & Son have removed to corner of Dodge and Church streets, where they have built new greenhouses.

MILWAUKEE, WIS.—C. F. Schneider has started in business on Auer avenue, where he has built a house 18x64. He will add two or three more houses in early spring.

MIDDLEPORT, N. Y.—J. H. Gould, whose business has in past years been mainly market gardening, is now devoting more space and attention to the growing of florists' plants and flowers.

ROCHESTER, N. Y.—James D. C. Rumsey, assignee of Jabez Frank Morris, the Brighton nurseryman, has filed a schedule showing liabilities of \$10,077.25; nominal assets, \$45,602.62; actual assets, \$19,801.41.

ELGIN, ILL.—The wound inflicted several weeks since by Geo. Souster's dog on George's good right leg is mending slowly, and there is talk of "grafting" some flesh and cuticle in place of that removed by the dog. Several of his friends have offered to make the sacrifice for George, who is able to walk about.

BEREA, O.—The Parker Floral Co. is the title of a new firm here, of which C. W. Parker is general manager and James P. Murphy florist. Their seed store and salesrooms are on Bridge street and the gardens and greenhouses at "The Maples." They will grow roses and carnations as a main flower crop, and a general line of bedding plants.

WACO, TEX.—The chrysanthemum show at the Cotton Palace music hall November 15 was a decided success. Mrs. S. W. Cohen, chairman Hort. Com., deserves special credit for her zeal and interest. Premiums were divided up among the various florists, the Dallas Floral Co., Dallas, Tex., being awarded the sweepstakes for best general display of cut bloom and plants. Mrs. Cohen proposes to organize a state chrysanthemum society and have annual shows.

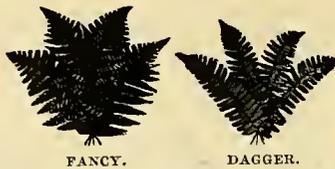

T. H. NEVIN CO.'S
"GREEN HOUSE PUTTY"

(TRADE MARK.)
To be applied with a bulb. The only putty made to work this way for greenhouse sash.

PUT UP IN 20 lb. CANS.
Has been used by florists in this city for years. Try it and you will use no other.
Read the following good report of our Green House Putty:

PITTSBURGH, Pa., September 1st, 1894.
We have been using the T. H. Nevin Co.'s Green House Putty for some time, and are pleased to recommend it to all those who wish a number one article. It has always given us perfect satisfaction. When you use this Green House Putty you will be sure of good results from same. Signed:

St John, New Brunswick.

The St. John Horticultural Association having secured about five acres of land at Lily Lake have erected a greenhouse 60x20, quarter span roof, and obtained the services of Mr. E. G. Knott, an experienced and competent superintendent, whose work on the public squares has elicited the greatest praise from the citizens the past season.

The annual chrysanthemum show was held in the assembly rooms of the Institute on the afternoon and evening of Nov. 14. The Y. M. C. A. orchestra furnished music which added much to the attraction of the show. Mr. McIntosh with his display of specimen plants in 12-inch pots easily captured the first prize. Messrs. Cruikshank and Goold run each other close on cut flowers; the former with the Queen and Good Gracious, and the latter with Viviani-Morel and Niveus received a great deal of attention. J. Bellington of Fredericton made an excellent display of standard varieties and captured a goodly share of prizes. Next season the boys propose to do each other up in good style. St. John will be a good town for wholesale chrysanthemum growers next spring.

W. H. Jones has been showing some fine "mums" at his store the past week, some G. W. Childs being exceptionally good; his gardener, Mr. Curran, proposes to be on hand at the autumn exhibition and show the boys what he can do. The chrysanthemum fever has struck the town badly; all dealers report a rushing business in addition to which a large amount of funeral work makes the florists look quite cheerful.

H. S. Cruikshank has put up two new houses this season. H. E. Goold of Sussex has also erected a 50-foot house for pot plants and rebuilt an old one. S.

CHRYSANTHEMUMS? I wish the people that grows them was dead. They're ruining the whole business these days.

Jos. HART.

MR. H. B. BEATTY, secretary of the F. P. A. and treasurer of the S. A. F., is at a Michigan health resort. He writes us that he has not seen his mail for months and that unfortunately the young lady who was familiar with the details of his society correspondence has removed from Oil City, thus for the time being stopping all business in that line.

YOU CAN never invest \$2 to better advantage than in a copy of our trade directory and reference book.

The Influence of Florists' Clubs on Horticulture.

BY MR. P. O'MARA, NEW YORK.

[Read before the Gardeners' and Florists' Club of Boston, December 1.]

It will, I think, be admitted without question that florists' clubs have exercised a potent influence for good on horticulture in the United States. What then is there to say on the subject? At the outset, it is well to remark that in speaking of the work of florists' clubs I have borne in mind the fact that private gardeners—who are essentially florists also—constitute an integral part of these clubs, and are entitled to a great share of the credit due them as organizations. In considering the subject of the influence of florists' clubs on horticulture, it presents itself to me in three forms—the past, the present, the future; or, in other words, what the clubs have done, what they are doing, what they may do in that direction. The first and second phases of the subject being purely historical, I do not propose to tax your patience by a recital of what has been accomplished, or what is being done. It is meet, however, that in passing some tribute be paid to the clubs who have done and are doing so much to advance the knowledge of our beautiful art among the people of this country and Canada. All honor to the men of Boston, New York, Philadelphia, Chicago, Baltimore, Indianapolis, Toronto, St. Louis, Montreal and numerous others throughout the country. May their efforts be rewarded with the success which must follow unflagging zeal and enthusiastic endeavor.

The third phase of this subject opens a broader view. The future is ever endowed with a vast perspective, the sun of promise; it is full of hope, for better things illumine it, of probabilities and grand possibilities, and I will be bold enough to point out a few of these as they present themselves to me. Have the clubs done as much as they are capable of doing? Are they working along the right lines? Are they using their influence to the best advantage toward the desired end?

In the first place, I think it should be the duty of a florists' club, wherever established, to encourage the organization of amateur horticultural clubs—that is, clubs composed entirely of amateurs—men and women who have a love for horticulture and who do their own gardening. If a sufficient number can not be found to organize a separate body, take them into the club as honorary members, and foster the horticultural spirit that is in them in every way. They will add strength to the club, and when the proper time arrives, when they are in sufficient numbers, they can, I believe, be induced to form a separate organization, either auxiliary to or in full partnership with the parent body. Every private gardener

should make it a special object to induce his employer to become an honorary member of the club with which he is affiliated, or an active member of the amateur society, if one is organized. Such a consummation must bring good results to him personally and to horticulture. It is needless to add that every private gardener and florist should be in some organized horticultural body.

Exhibitions furnish the great means by which the clubs can influence horticulture. They are the executive arm, so to speak, and as the practical working details are generally in the hands of the clubs they can use them to mould public opinion—to educate the great horticultural public in almost any direction. It is fair to assume that the basic principle of all our exhibitions is educational—to lift the public up to better things by showing them what cultural skill can accomplish. But is this principle followed out to its logical conclusion? I think not, and I will attempt to show wherein, in my opinion, we fall short of the ideal, which is undoubtedly present to the view of each and all of us. It is generally assumed when preparing for an exhibition that when the premium list is made out, the exhibitors assured, the music engaged, the advertising, as now conducted, looked after, that the program is completed and the last effort possible is made. But is it? "That's the rub." I think it will be admitted that as a musical festival our exhibitions fall far short of the ideal, and can not compete with the same article which may be heard for the same admission fee in nearly all our great cities. What then is there to attract? Splendid flowers, which seem "sour grapes" to many, nay, most of the amateur visitors, considered in a horticultural sense, and from which they turn away with a sigh when they think of their own modest little blossoms, brothers and sisters of these stately beauties, but oh, so different, and they look upon these great blooms as the result of some occult science, some magic, the secret of which they can never read. We make the great mistake, I think, of not having a primary as well as a senior class.

Another weakness in our exhibitions as now conducted, in my opinion, is that there is an overpowering sense of "still life," a monotony broken only by the music. People feel the weight of it, and weary rapidly. The horticultural public, the sight-seeing public, expect more, are entitled to more and demand more, and it is to the interest of the clubs to supply it. I believe that a step was made in the right direction when the firm with whom I have the honor to be connected inaugurated the potting contest at the chrysanthemum exhibition in Madison Square Garden, New York, in 1891. Much more could have been made of it had the committee in charge been fully alive to the

true importance of it; but, even as it was, it furnished a text for the newspapers, and advertising was obtained for the exhibition that probably could not be bought for one thousand dollars. We all know how difficult it is for the brightest reporter to make readable copy regarding a flower exhibition for any of the great dailies in our large cities. With the best of intentions and supplied with the best material which the officers of the clubs or the press committees can give him, he generally succeeds by making it ridiculous. Not so in this case; he was in his element and made the most of it. Why not supply more of the same material? Horticulture is full of interesting operations about which the public know little or nothing, and no doubt if they were performed before their eyes they would look on with avidity, be interested or amused, but in either case it would be education. People are always interested in deft handiwork. We have, many of us, no doubt, been held spell-bound ourselves before some shop window in looking at a man pulling candy or making cigars, simple as the operations are, and yet we possibly had no personal interest in them. At the great World's Fair in Chicago wherever a wheel was turning, a shuttle throbbing, or a man or woman engaged in handiwork of any kind, there was sure to be a crowd, while the "still life" exhibits, imposing as many of them were, were practically ignored. I saw crowds gazing at the traveling lawn sprinklers, and, as a consequence, their attention was directed to the plants on the lawn, which otherwise they might never have seen and undoubtedly would not have perceived. Here is a universal trait of human nature which apparently has been overlooked in our exhibitions, and it is time we should awake and take advantage of it.

What, for instance, could be more interesting than to have a booth where budding and grafting would be performed, and a member of the club, competent to explain, constantly there to answer questions relative to the operation? Samples of budded roses and others on their own roots should be on hand, and instructions for planting the former given, pointing out the difference between the two, and explaining how it is that the stock sometimes grows, and when left to develop ultimately kills the true rose. A plant with developed "suckers" could be shown to fully explain this matter. When we consider the thousands of these that are sold annually and the great number that are lost through ignorance of the purchaser, the importance of it may be estimated. A booth where cutting making would be going on, with a man to explain the process by which nature perpetuates plants by this method; he could also give general directions regarding the care of them and the best time to put in the various plants. A booth where pruning would be explained; in fact several of them for the various kinds of plants. Charts could be used to good advantage here, some showing the various fruit trees properly and improperly pruned and planted; small fruits of all kinds as well. Here is where people are vitally interested, and incalculable good would be accomplished by it. Suburban residents would, without question, find it profitable and pleasurable to attend exhibitions where manual art lessons in horticulture would be given. A booth where seed sowing would be performed and explained, both flower and vegetable. Here is a wide field for practical work, and I am sure that the importance of it will be

realized. How many bright dreams of amateur horticulturists have ended in disappointment for the want of rudimentary knowledge in this line. It is essentially the duty of the clubs, composed as they are of florists and nurserymen, seedsmen and gardeners, to impart this knowledge, and the exhibition is above all the place they can do it.

These are only a few of the many things which would add interest to exhibitions, and which would assuredly attract people to them, just the class of people too that we want to visit them, the people to whom we must look for support in our business ventures.

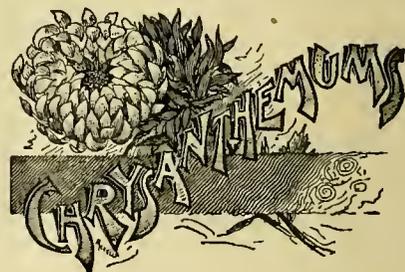

There is another branch of horticultural knowledge which should receive attention and aid should be solicited from the agricultural colleges and experiment stations in carrying out this part of the program. I refer now to insects and plant diseases. At the recent flower and plant exhibition in the rooms of the Farmers' Club in New York a chart was shown upon which were specimens of chrysanthemum foliage which had been attacked by various diseases. This was exhibited by the Cornell University and attracted marked attention. Similar charts bearing on various diseases should be found at all our exhibitions, and some one should be found to attend who would explain them and who would also explain known remedies for their prevention and cure. This branch would not only interest and instruct the amateur, but would also be of the gravest interest to the professional florist and gardener.

In this connection, I will digress for a moment to say that all the leading clubs of the country could, in my opinion, with profit to themselves, employ a vegetable pathologist and entomologist, whose services would be at the disposal of the clubs for the benefit of its members. Here would be special inducement for all florists and gardeners to become members of such clubs, and it is no exaggeration to say that it would prove a profitable investment. His duty it would be to examine and report on plant diseases at each meeting of the club, to attend the exhibitions for the same purpose, and to look after the individual interests of the members when their crops were threatened by diseases. The time is at hand, I believe, when we must invoke the aid of science if we would meet the enemies of plant life quickly and energetically, and this method seems to me to be a practical one.

In connection with our exhibitions I think a room should be devoted to object lessons in plant growing. For instance, a "pot bound" plant and one that had been shifted at the proper time. Sample plants bearing on the all-important question of watering. A plant grown in ordinary garden soil, such as an amateur gardeners too often use, and the same variety grown in prepared soil, with samples of both grades of soil. Plants treated with special fertilizers and without. Chrysanthemums, carnations, etc., disbudded and grown naturally, and many other phases of plant growing, which would suggest themselves. All this would be highly interesting to amateurs, would break the monotony of an exhibition as now held and would increase the respect for our calling among the people. What a text all this would furnish for the reporter visiting the show, and what an inducement it would be for people to visit it.

Now the question presents itself: Have florists anything to fear from spreading knowledge broadcast? For my part I answer an emphatic no. It is my belief that every garden in good order is an

inducement to some one else to have one like it; every healthy, beautiful plant an eloquent advocate for a companion; and, as a necessary corollary, every untidy ill kept garden, every sickly, miserable plant is a deterrent to those who see them and who may aspire to have one. The wider we spread horticultural knowledge, the broader is the field we have to work in, and the more profitable it will become. Ignorance of the needs of plant life on the part of the great mass of our people is, I believe, the greatest obstacle in the way of a more rapid advancement of all branches of horticulture. Let in the light at every opportunity. Consider the vast number of catalogues issued annually in the country by the seed and plant houses, and by comparison the infinitesimal number of horticultural journals distributed. Is it because the people who sow and plant feel they know enough about it? No, but because the absolute want of knowledge has not been brought home to them nor the means to acquire it presented to them. Let it be the duty of the florists' clubs to begin this great work on proper lines. Let them supply through exhibitions the knowledge the people want, and through the horticultural and daily press it will be carried afar and fall on good ground, resulting in undoubted benefit to the disseminators. As knowledge is diffused the love of horticulture must increase proportionately; people will procure more from the growers to satisfy this love; the standard of excellence will be raised, and florists' clubs will then exercise the influence on horticulture which will be theirs by right of the efforts they have made to bring about these results.

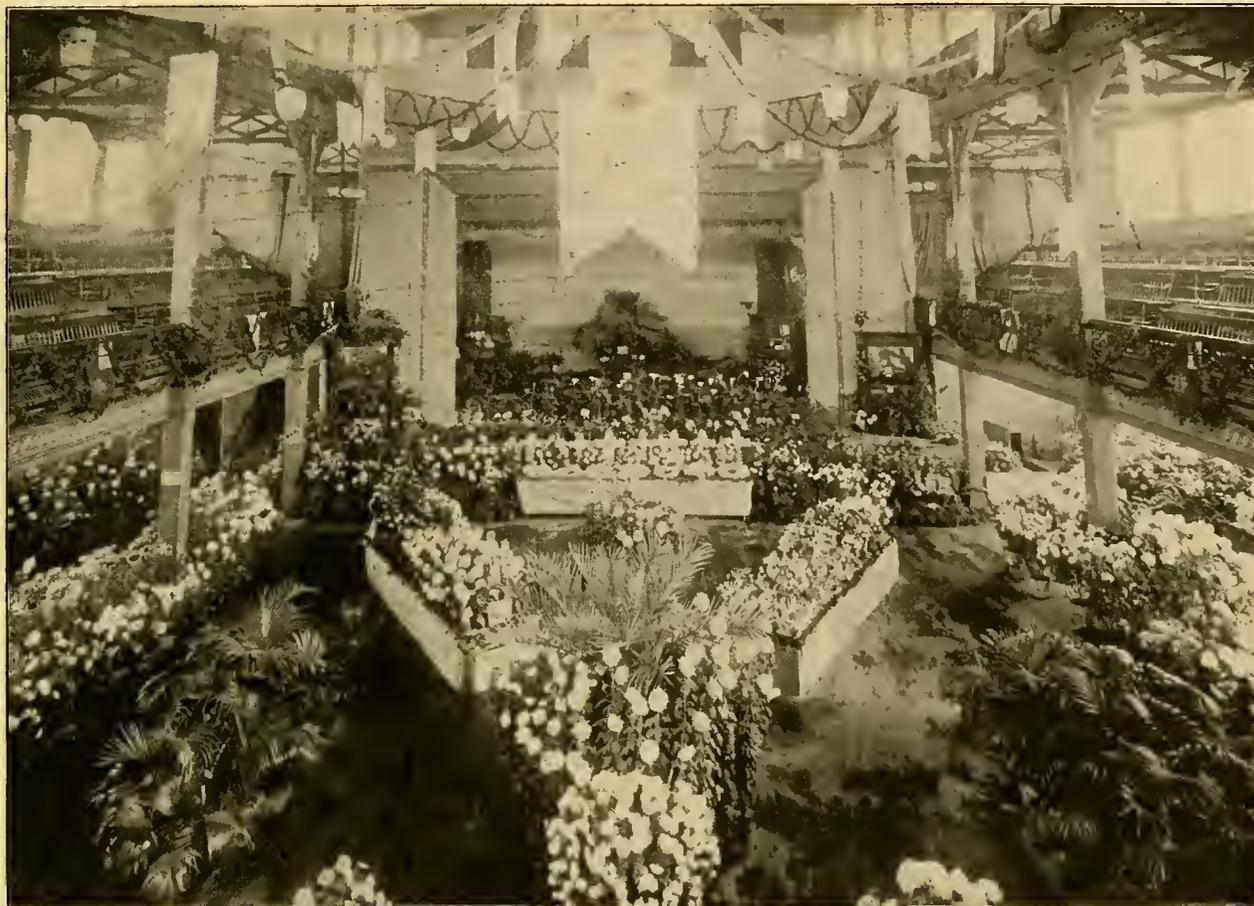

Chrysanthemums in the Solid Border.

Any grower reading Mr. Hill's remarks on bench-grown chrysanthemums would naturally come to the conclusion that no good thing can come out of the solid bed system, and that the grower who adopts it must be considered a "back number." Perhaps so, certainly the modern greenhouse has the advantage in many ways, but as a matter of course good chrysanthemums can be grown in solid beds. Several years ago a number of prize winners exhibited by me at New York, Orange and Philadelphia were grown in solid beds. They not only lasted well all through the shows, but some of the flowers exhibited at New York also did duty at Philadelphia, while, at a succeeding show, flowers grown on benches could not pass muster the third day.

The chrysanthemum is not a hot house plant; it needs its head as well as its feet kept cool. It is also a surface rooting plant, and if grown in a bed does not require heavy mulching and watering, as when grown on a bench. During summer benches require much watering, and each drenching carries away much of the soluble plant food, so a heavy application of manure is needed to keep up vigor.

I notice the high honors accorded to Mrs. E. G. Hill on the other side, and I feel sure it received much cooler treat-

PARTIAL VIEW OF THE TORONTO CHRYSANTHEMUM SHOW.

ment there than here. I am very well pleased with it from late-struck cuttings planted in the solid bed the latter part of June. I cut my first flowers October 9, receiving \$5 a dozen for them in New York the first few days. WM. TRICKER.

View of the Toronto Show.

The photograph (which was taken by Mr. A. Beales of Carlton street) herewith sent takes in not quite half the show. The roses 10 of a sort, vases of 25, 12 and 6 of chrysanthemums and six or seven entries of 12 distinct varieties, with more than half the specimen plants are not visible.

In the middle group is a large specimen of W. H. Lincoln shown by Mr. J. H. Dunlop which took equal first prize with another specimen of the same variety shown by Sir Casimir Gzowski (gardener Mr. R. Marshall). On the right hand table were the carnations, with a vase of "Philadelphia" and some other seedling chrysanthemums. On the left hand table were three entries of 25 chrysanthemum blooms in 25 varieties, at the back of which are five magnificent vases of 50 roses. On the middle table under the stage are part of the designs and baskets with a group of chrysanthemums and foliage on either side. Just above these on the stage were specimen ferns, orchids, cyclamen, etc., backed up by large pots of calla, a decorated mantel on either side. At the back of the stage in the middle was a large latania, the tub banked with ferns and *Cattleya labiata autumnalis* (from Exhibition Park) with decorated mantels again on each side. The stage had a most charming effect by gas light. E.

A Parting Shot.

And so King "Mum," like the Arab, has again folded his tent and silently bled away; but his victorious march, trophies, and all are still fresh in our minds. Many have fallen on the way, gallant knights of '92-3, who lie almost forgotten on piles of rubbish, or rotting in stagnant heaps, chilled, frozen, lifeless.

And have you noticed the brilliant corps of Amazons in his train—princesses, ladies, mademoiselles and mesdames? What more splendidly arrayed than an army of "mums"? The king of gloriousness has disputed every inch of supremacy with the queen of grace and beauty. His majesty usurps every place of honor, and his sway, transient though it may be, is at the same time absolute and sweeping. The blood red petals of a Meteor rose have been ruthlessly trodden under foot. American Beauty has temporarily shared the fate of Li Hung Chang, and even the divine flower withers in disgust at the mere sight of a chrysanthemum.

The Japanese army has pretty much everything its own way at the present time: Victory is perched upon its banners in spite of the few Chinese strongholds that remain. It really looks as if progress was in coincidence when these two great classes hybridize, assimilate and unify.

Well, "good riddance," chrysanthemum! You rank despoiler of the flower market! "Though lost to sight, to memory dear." There is no doubt about that. I haven't made a cent on my rose crop since you befooled the public with your brassy tongue of supremacy. Humbug! And yet I love your curly golden locks and bow

down and worship along with your other legions of devotees.

But, good-bye, I say, and I've no tears to shed. You have depleted my pocket, eaten and drunken at my expense, dined sumptuously, feted and honored, AND I haven't a cent to show for it; fact! The only way I can strike a balance in your favor is to turn the ledger upside down, and look for the credit on the debit side.

For all that, old blusterer, come again. I'm laying for you next time, and all your frowsy clan. And come early; don't wait for the chill winds of autumn to tangle you all up. Come in mild September. I want to steal a march on the other fellows. Come and see me first.

Honestly, here along in December I'm tired of the very sight of you. You're a back number. A weary, bedraggled chrysanthemum! Don't wear out your welcome—be off with you! Good-bye—au revoir. R.

Measuring Chrysanthemum Flowers.

The florist who has never attended a large flower show is likely to be confused when he reads of chrysanthemum flowers on exhibition that are ten, twelve, or fourteen inches across; and perhaps feels mortified, when he looks at his own flowers that are five or six inches in diameter.

It will be consolation to such to know that these enormous measurements are obtained by beginning at the tip of the florets on one side and carrying the line over the crown of the flower down to the tip of the florets on the other side side, two-thirds of the distance, in some flowers, representing depth and not width

the measurement not being the diameter, as he may have supposed, but often more than the half circumference.

I think it would be better in all cases if the measure given was the extreme width of the flower, the depth being mentioned separately, when necessary. Visitors to a flower show, are apt to feel that they have been imposed on if they read of chrysanthemums fourteen inches over and find on examining them that they are only six or seven inches through.

The plan of the FLORIST in its illustrations of vases of chrysanthemum flowers of having a line or scale below—similar to those in most entomological drawings—for comparison, is a good one.

Our own measurements, are made in this way: On a sheet of stiff cardboard a number of circles are drawn, half an inch apart, from a common center, and the diameter marked beside them. From one side to the centre a narrow slit is made, wide enough to admit the stem of the flowers. The card is drawn up close beneath the flower, and the measurement can be read at a glance.

We hear many complaints of the chrysanthemum disease, of rust, of curled leaves, and of leaves falling prematurely, and I have learned that when I buy a few new varieties, if I do not throw them away because they are diseased, I usually must grow them for two or three years before they acquire health and vigor. This lack of vitality must be caused by improper treatment, by coddling, by too much forcing, and by over-stimulation.

We are told by some authorities on chrysanthemum culture that at a certain stage in the plant's development it must be fed liberally with liquid manure, two or three times a week or oftener, and the composition of this liquid food must be varied according to certain rules. As evidence that this treatment is unnecessary, and perhaps injurious, I wish to cite from our experience this season, which only confirms my previous belief. On one raised bench nearly 1700 plants were set in a moderate depth of fairly enriched fresh soil. They were kept clean, carefully watered, disbudded, and tied as needed, but were not given any additional food, either liquid or dry, beyond what is contained in ordinary hydrant water. But two plants were removed as being unhealthy; all the others were strong and vigorous, retaining their fine green leaves to the ground. The flowers, with scarcely an exception, developed perfectly, were of good substance and lasting, and were all of fine large size, for the varieties, many of them being more than twelve inches across when measured over the hill top, in the usual way.

Franklin, Pa. W. T. BELL.

[In reference to measurement of blooms would it not be well for the Chrysanthemum Society of America to give this matter consideration, and prescribe some uniform plan of measurement.—ED]

Chrysanthemum Plants for 15 Cents.

A St. Paul subscriber sends us an adv. of a local department store in which appears the following:

In connection with our great Thanksgiving sale in all departments, the "Plymouth" Boys' Clothing Dept. will sell 3,000 Choice Chrysanthemums in four, five and six-inch pots, at the ridiculously low price of 15c and 25c each.

They are all first-class and desirable plants, in good condition, large and bushy, in flowers and buds, and would easily sell by florists at from 35c to \$1.25 each.

Thirty-five and fifty-cent kinds for 15c; the seventy-five cent and one-dollar kinds for 25c.

As the "Plymouth" wishes every past and future patron to receive the benefit of this opportunity, only two can be sold to any one person.

He writes: "I wish you would express in the FLORIST an opinion as to whether such sales are a benefit or an injury to the trade. I have not seen the plants, so of course do not know as to their condition. But it would seem that if they are as represented the grower should realize a much better price for them than the figures given in the adv."

We would not feel like encouraging such sales. We know it is held that they diffuse a love of flowers among the people by placing plants within the reach of those of moderate means, but like all bargain sales the stock is largely trash that cannot possibly give satisfaction, and from which no good can result. We think the department store problem will soon work out its own solution. In several of the large cities it has already been solved so far as the stores that have tried a floral department are concerned. A very brief experience with stocks of plants has been more than sufficient for the shrewdest managers of such stores.

Two New Chrysanthemums.

The two varieties figured in this issue are seedlings originating with E. G. Hill & Co., shown for the first time this year. Louise D. Black, a rich yellow which received special mention in the seedling classes at the Chicago show, may be described as resembling Mrs. L. C. Madeira, but is much brighter in color and stiffer in stem. It is a very solidly built and showy flower.

Henry Reiman is another yellow, rather suggestive of Challenge, but an improvement on that variety. It is high built and solid, developed right to the center, and borne on fine stiff stems. It seems likely to be very useful commercially.

Carnation Notes.

"Well, Charlie, why are your throwing out those healthy looking plants?"

"Just look at the flowers, only semi-double, and these plants came from stock that produced as fine double bloom as ever was seen, but that is the way with new sorts very often; they will sport, and so we must save the best, and thus work up a good type."

"Why do I cut off those few branches? Well, if you will hold that up to the light you will see a few light streaks through the leaves; that is bacteria, a diseasesome claim, but it seems to me a weakness caused from certain conditions which I can not explain. Now it is best to remove all such leaves from the plant by cutting the branch upon which they are well back; this generally stops the trouble."

"Say, my boy, it is too cold in these houses for me, as I have a cold, but why do you not keep it warmer?"

"Well, as you have a cold it naturally seems much colder than it really is. As it happens the mercury is up to 58°, and as this is a cloudy day remember too I dare not run the houses any higher. The stems are weak enough as it is. Two bright days only in a week are not conducive to stiff stems."

"Yes, I am taking off all the cuttings now which are large enough, and especially from the Scotts. Why? Oh, sim-

ply because those cuttings are large enough to root well, and then you see they retard the growth of the flower. Now there is a stem which was missed several days ago. The cuttings, or rather laterals, for they are not cuttings until they are taken off, have materially checked the growth of the bud. This point you will often see if you watch closely. I know it is the opinion of some of our leading growers that cuttings should be made after the flower is picked, and I have been doing so until a few days ago. Now I have no hesitation in saying that this plan is decidedly wrong if you wish to produce large flowers. Every side shoot and bud except the crown bud should be removed from the stem as far down as the bud is to be cut."

This query came to me several days ago: "What varieties would you advise me to grow in a house 100x20 for local trade?" Find out from your neighboring florists, if you have any, what sorts do best in your locality and what varieties are in greatest demand. You must grow four or five kinds; too many growers make the mistake of confining their attention to one or two standard sorts; I am one of them. We lack a healthy productive crimson, also a yellow. We have good whites, and pinks of several shades, but the former are not around. If the specialists in seedlings would only work for these we would be very thankful; and then for a scarlet we in this section are obliged to fall back on old Portia.

CHARLES H. ALLEN.

Miscellaneous Seasonable Hints.

It pays to disbud your mignonette and keep it tied up. If you don't disbud the lateral shoots will grow so fast that the flower will be small and short. There will always be plenty of shoots springing from the bottom to supply successive crops.

Don't neglect to stand over your imported azaleas and rub off the growth they are now beginning to make, or the new leaf growth will take the lead and the flower bud will perish, and your plant will be unsalable for this year. This premature growth as it may be called is caused I believe by the ocean trip; they are subjected to a warmer temperature than they would be in the houses, and when brought into daylight with a good soaking of water, which they must get, they make this early growth. On many varieties you will find a few long straggling growths; they are invariably blind shoots and should be cut back, for they add nothing to the appearance of the plant either in symmetry or in flower.

Cyclamens will soon be in their prime; don't keep them in a cool damp house where the thermometer goes down to 40° or 45° at night. A light airy dry house where the night temperature is about 50° to 55° at night is right, and never crowd them; a free circulation of air among the plants is of the greatest importance, and an ever watchfulness against aphids, which means smoke at least once a week. The greenfly always attack the young leaves and buds down in the center of the plant, and are difficult to dislodge if they once get a footing there.

Now you have plenty of bench room your cinerarias and calceolarias should receive attention. The earliest of these will be in their flowering pots, but the Easter lot, the most important, should now go into a 4-inch. Use chopped up and rather rough compost, i. e., not sifted soil, the water passes through it so much

CHRYSANTHEMUM LOUISE D. BLACK

better. An over watering often carries off cinerarias. Both the last named plants delight in a low temperature, but no freezing, 40° to 45° at night is plenty high enough, and will grow them all the sturdier. In addition to regular fumigation I keep tobacco stems loosely spread between the pots; it helps keep down greenfly very much, and both of these plants are easily hurt by too strong a dose of tobacco smoke.

If you have any *Cypripedium insigne*, and they are in full bloom, remove them to a cooler house, where the night temperature is not over 45°. They will last in perfection a long time. If your *Dendrobium Wardianum* and *nobile* have ripened their last summer's growth as they should, and have been for two months in a cool house you can bring on a few at a time to a warmer house, where they will soon send out their beautiful flowers.

I find I have a few cuttings in the propagating bed; some plants can't be produced in the spring by the thousand, and you must begin early. *Begonia Rex* should be in now; if much later the plants will be too small to be of use in the month of May, when you need them, and for certain places you do need them. *Strobilanthes* is another plant you want to propagate all you can, for you will find plenty of use for it in the spring. *Acalypha* should be propagated as largely as it can, for this fine subtropical plant is very satisfactory not only in beds but in veranda boxes, vases, etc. Whatever stock you are short of should now be propagated, for the conditions are now the very best for that operation, viz., a steady bottom heat, with a comparatively cool top heat, and little sun to wilt cuttings.

WM. SCOTT.

Please mention the AMERICAN FLORIST every time you write to an advertiser.

Cost of Growing Coleus, Cannas, and Geraniums.

The following is referred to me: "I would like to ask growers of bedding plants at what rate 4-inch, 3-inch and 2-inch geraniums, 2½ inch coleus and 4 and 5-inch cannas can be grown by the 1000, well grown plants. Standard varieties."

I believe this subject was well discussed 4 or 5 years ago in your columns. It's an interesting one, but one that it is impossible to give anything like a definite answer to, what I might say may be honestly and justly refuted by another grower, and yet we may both be right from our experience and method of growing. And does your correspondent want to know the cost without any margin of profit, or is it the price with a living profit put on? There are all these considerations and many more. Do you grow 1000 or 20,000? Are your customers satisfied with a weak drawn-up plant that has been grown as close as the pots would stand, or do they demand a good sturdy plant in flower and with leaves to the pot? It makes quite a difference whether your men or yourself can shift a 2-inch to a 3-inch or 3-inch to 4-inch at 100 per hour or 500 per hour. Still that is not of so much importance as the question how long do they occupy your benches. That is the vital question always. The late Mr. Peter Henderson told me that the most profitable plant he grew was *Coleus Verschaffelti* and undoubtedly he had proved it so.

Some 20 years ago we ran greenhouses a little differently. Geraniums then were allowed to occupy a good deal of room, simply because there was nothing to fill the houses with except carnations, and when the geraniums and other spring stuff wanted more room out went a bench of Degraw, Edwardsii or La Purite, Nowadays geraniums, coleus and cannas have to take a back seat till March or April. My own plan nowadays is this:

A house has chrysanthemums either in pots or grown for cut flowers till December 1. We will say "mums" are about gone, or most of them. Then in come lilies and azaleas. They are gone at Easter, then geraniums are put into their last shift, with us a 4 inch, and occupy the benches till the end of May. After the geraniums are gone your *Lilium lancifolium* in variety can be given good attention and pays for the mid-summer crop, or if you want to grow "mums" it will be time to plant those again as soon as the geraniums are gone, so there is no time when benches are empty. I will give what I consider the plants could be raised for providing you did it in a large way and were sure of a market. I hope some one will take this up and pull me to pieces; I rather like it and don't get as much of it as I could enjoy. The figures I give are not at what a man should peddle one-half a dozen geraniums and "charge it, please," but what he could dispose of wholesale by the thousand.

Geraniums, 2½ inch \$4 per hundred.

Geraniums, 3 inch \$6 per hundred.

Geraniums, 4-inch \$8 per hundred.

Cannas, 4 inch \$8 per hundred.

Coleus, 2½ inch \$3 per hundred.

WM. SCOTT.

Nitrate of Soda.

"Tisbut" asks through the FLORIST "how to use nitrate of soda as a fertilizer in the greenhouse and in the field, and also whether it can be used as a liquid."

This question might have been answered by someone who has used it more largely than I have, and I trust this may bring out the experiences of others. My knowledge of it in this country is only in the greenhouse. In solution the strength was one pound to one barrel (32 gallons) of water. That I am sure is safe. In Great Britain it is used much more extensively than here and is considered a fertilizer of high value, more particularly for all grain crops. They sow it broadcast at the rate of 200 or 250 pounds to the acre.

A little experience of my own very fresh in my memory may be worth relating. It happened a year ago while planting a bench of Grace Wilder carnation. I had about 1 gallon of nitrate of soda lying round and thought a little experiment would be just the thing. About the middle of the house I reserved a space as near as possible 50 square feet, sowing the soda on the surface and raking it in, and then planting the carnations. In less than one month 90 per cent of them were dead, while on each side of the defined line the carnations were as thrifty as carnations could be. Hereafter only in weak solutions for me.

W. S.

Snails and Fern Benches.

"A Subscriber" says: "I have tried lime and slug-shot both. First a sprinkling of lime on the soil and slug-shot on the fronds. Is there any danger of using too much slug-shot?"

I have no experience with slug-shot as a remedy for snails or slugs. Fine air slaked lime dusted on and among the fronds is an excellent thing to keep slugs away, and is, I believe, the remedy used by the large growers of *adiantum*. If your collection is not large you can catch most of the slugs by traps made of potatoes cut in halves. Dig out the potato till it is like an inverted egg cup and place them on the soil close to the plant. Inspect your traps every morning and you will find many of the slugs have found the

hollow potato a convenient roosting place for the day. Lettuce and cabbage leaves laid on the soil will answer the same purpose, but don't forget to let a boy go round every morning and collect the victims. W. S.

A Greenhouse Truck.

With four flanged track wheels out of an old threshing machine, two iron rods for axles, some blocks for bolsters and a board one foot wide by five feet long for a platform, we made a truck to haul material in the carnation houses for mushroom beds, which is so satisfactory to us that I pass the idea on for the benefit of others.

We keyed the wheels flange side out on the axle so as to use the board walk one foot wide for the track. Several boxes can easily be taken at a load and like other simple helps the wonder is that we didn't make it sooner. With a temporary track of foot boards laid on the benches I think it will prove of great use in changing the soil, etc., and will alleviate that "tired feeling" which strikes us sometimes. C. P. BARNARD.

Northbrook, Pa.

Dahlias Not Flowering.

A question comes from Jamestown, N. Y., about the above, and says their soil is a pine, oak and chestnut soil and gravelly, meaning I suppose that it is a light leaf mould deposit on top of gravel. If the plants grow vigorously and don't flower, as your subscriber says they do, it is more than likely that the soil is too much of a leaf mould texture. Dahlias grow and flower best in good strong loam, but well enriched with decayed stable manure. Our long dry and hot mid-summer is very trying to them, and they should always be mulched and receive 2 or 3 times a week a copious watering. Plants raised from cuttings will always flower earlier than the old roots. I would advise digging a hole for the dahlia plants in spring 18 inches wide and 1 foot deep; fill in one-fourth of the light soil, one-fourth of good rotten manure and one-half of a good loam. This seems considerable labor, but where dahlia flowers are wanted it will pay. W. S.

Mealy Bug Again.

The following comes from Kirksville, Mo.: "Is there any remedy for mealy bug on plants. I have tried hand picking, but that is of no avail. I shall try the kerosene emulsion, but is there anything else?"

Hand picking would be a very tedious job. Many valuable plants, such as palms and cycads, must be washed or rather sponged with the kerosene emulsion if they are badly affected with these pests. Soft leaved plants, such as coleus, which are often troubled with them, should be thrown out and a clean stock procured. The very best way to keep your place clear of mealy bug is a free and vigorous use of the hose; a good syringing they can't endure. This does not necessarily mean drown the plants, but a fine hard stream intelligently directed at them upsets their household arrangements sadly, and if faithfully persevered in mealy bug won't trouble you. W. S.

NEVADA, MO.—The chrysanthemum show here was very successful. It was projected by Mr. J. W. Talbot, the florist, and the local press warmly commends his enterprise.

Boston.

The annual exhibition of herbariums by the children took place at Horticultural Hall on Friday and Saturday, November 30 and December 1. Both halls were entirely filled with the collections, the exhibit as a whole showing a marked improvement over that of last year, and the work of drying and mounting being as a rule most beautifully done.

The specimens, of which there were about three thousand, were mounted on white sheets of uniform size, the common name, botanical name, habitat, with name and address of exhibitor being inscribed in a space provided on the lower left hand corner of each sheet. Native flowering plants, trees, grasses and ferns were most largely represented, the whole plant including flower and root being shown when practicable and tree leaves being mounted in pairs so as to show both upper and under surfaces. The various collections comprised all the way from ten or twenty up to one hundred and fifty species each, the premiums having been classified so as to give the smaller contributors a chance to compete. The exhibitors were about equally divided, boys and girls, and all sections of the state were represented but a majority of them seemed to hail from West Roxbury and Jamaica Plain, where this delightful study has been encouraged and stimulated among the school children to a greater extent probably than anywhere else in the country. The intelligence displayed and the intimate knowledge of the botany of our native plants shown by these youthful exhibitors is astonishing and almost beyond belief, and the indefatigable committee of the Mass. Horticultural Society in charge of this department have every reason to feel elated over the results accomplished.

There were two new ferns exhibited which were discovered by Raymond Doyle of Newburyport and named by Geo. E. Davenport of Medford. One was a hybrid between *Aspidium cristatum* and *A. marginale* found in Mass., and the other a new species, *Aspidium simulatum*, found at Indian Point, Me.

Thanksgiving Day is always counted upon to bring a pretty good demand in the flower trade, and this year was no exception to the rule. The day was exceedingly cold, the coldest for many years, and very careful packing was necessary, but the weather was clear and customers were out in gratifying numbers and as far as heard from the trade gave general satisfaction.

There was some disposition to hold back stock for a few days beforehand, but not to the extent done in former years and most of the stock sent in was fresh and good. Following Thanksgiving came three or four rather bleak and stormy days with a decided shortening up of the supply and prices have been full as high as and in some instances higher than those prevailing for the holiday.

Special premiums offered through the Mass. Horticultural Society have been awarded by the garden committee as follows: For the best kept garden, extent three acres, judged for three consecutive years, to N. T. Kidder. The best house of chrysanthemums arranged for effect, first to N. T. Kidder, second to T. D. Hatfield. For the best house of chrysanthemums grown on benches, first to Waban Rose Conservatories, and second to Wm. Nicholson. A special gratuity was also awarded to Chas. J. Dawson for a house of naturally grown chrysanthemums, and to C. V. Whitten for a bench of Ivory.

The December meeting of the Gardeners' and Florists' Club was a particularly interesting one as was evinced by the large number of members present to hear the lecture which it had been announced would be delivered by President O'Mara of the New York Florists' Club on the influence of florists' clubs on horticulture. The essay, which will be found on another page of this issue, was received with marked attention and the remarks that followed were all highly commendatory of the sentiments expressed by the essayist, Messrs. Dawson, Finlayson, Foster, Cotter, Norton, Elliott and others all speaking in an interesting manner of the new thoughts and ideas that had been suggested. It seemed to be accepted that the public interest in the practical manipulations in floriculture ought to be stimulated and that the more discussion cultural problems received in public the greater benefit would accrue to the trade. It was suggested that floriculturists have been inclined to be too secretive and too eager to retain the knowledge gained by their own personal experience, and that this policy was short sighted and unwise. A few more papers as practical and progressive as Mr. O'Mara's would undoubtedly prove the long looked for remedy for small and uninteresting meetings.

The business session of the club brought a surprise in the declinations of the president and vice-president elect to accept the positions to which they were elected a month ago. This unexpected predicament places the club in an embarrassing position and it will probably take the January meeting's whole time to put things in proper working order.

The presence in town of Mr. P. O'Mara, president of the New York Florists' Club, furnished a good opportunity for the payment of an election bet that Lawrence Cotter had won from P. Welch, which occasion consisted of a dinner participated in by a number of Mr. Cotter's intimate friends, with Mr. O'Mara as a special attraction. Mr. Cotter presided and introduced each speaker in his inimitable manner. Mr. P. Welch told how Mr. Cotter had forced him into a corner, a victim of circumstances, and how he had been obliged to back up his principles with a wager which turned out as usual in Mr. Cotter's favor. Mr. Ed. Hatch, Jackson Dawson, E. M. Wood, W. J. Stewart, Warren Ewell and others all made brief remarks with a unanimity of expression in welcome to Mr. O'Mara, and approval of those gentlemen who make such wagers, and thus became public benefactors. The absence of his perpetual adversary, Judge Hoitt, left Mr. Hatch free to give his whole attention to Mr. Norton and much fun was occasioned by his persistent but futile efforts to badger the latter into a wager, similar to the one then being settled. The exercises as usual closed with "Auld Lang Syne."

In *Garden and Forest* we find an interesting article by M. C. Robbins on the possibilities of flower shows in which the writer has something timely to say regarding the grouping and arrangement of exhibits and the necessity of harmonious and appropriate surroundings if an exhibition is to be made thoroughly artistic and pleasing as a whole. The lack of architectural attractiveness in the halls used for the Boston shows is commented upon, and that there is sufficient reason for the unfavorable comments must be admitted by anyone who has attended the exhibitions of the Mass. Horticultural Society.

An exhibition in these halls also suffers

CHRYSANTHEMUM HENRY REIMEN.

greatly from being divided and loses much of the impressiveness which would accrue from having the display complete on one floor.

Mrs. Robbins is incorrect, however, when she pleads in extenuation of Horticultural Hall's defects that it dates from "the early forties." On a marble tablet to the right of the entrance to the lower hall is the following inscription in plain letters: "Horticultural Hall, Dedicated September 16, 1865," twenty odd years later than the "early forties." Making due allowance for the time of its erection it can not be gainsaid that Horticultural Hall never was an appropriate or convenient place for the holding of exhibitions, a safe repository for a priceless library or a credit to the architects under whose supervision it was constructed.

Mr. Chas. Storer, the artist, is about to go into the florist business with Mr. Harrison of Pawtucket, R. I. Their greenhouses which are now being built are on the road between Pawtucket and Providence and are four in number each two hundred feet long, heated with Weathered boilers. Orchids, grapes and novelties will be grown.

Philadelphia.

Things are different, very different, a great change has taken place. Last week it was "what do you want" from the seller, now the query is from the buyer "what have you got?" and the question is not alone asked over the counter, but the hustlers are waylaid at the stations as soon as they set their feet in town, or messengers are sent out at daybreak to the greenhouses in order to insure a supply for the day. It is needless to say that this state of affairs is gratifying to all hands, there is a snap and vim to business which if it continues argues well for a prosperous season.

Thanksgiving Day trade was excellent, considerably better than last season, it had a Christmas smack to it. The Har-

vard—Pennsylvania foot ball game played on that day also created a great demand for flowers and there were not near enough violets and red roses to supply the demand, double violets being particularly scarce. It was a great day for the "mums" and many a grower cleaned up his stock for this occasion. Lincoln and Eva Hoyt were among the best sellers. Mr. Harris sold a small hay wagon load of Mrs. H. H. Battles which he had in quantity and his "Snorter" seedling, the large white with yellow eye which he had last Christmas. "After the Ball," was also in demand.

Carnations were good sellers, the demand was so great that they seemed scarce although there was a good supply. By the way, there hasn't been a complaint about "sleepy" pinks as yet, they can be kept several days at this season and still present a fresh appearance. Prices have stiffened considerably and \$1.25 to \$1.50 is now asked for good stock. Roses were in great demand with Beauty in the lead; \$3 per dozen was the current price, at this writing it is \$4, with prospects of a step higher in a few days. Selected teas of the larger class now bring \$4 to \$6, while the smaller kinds sell for \$3.

G. Anderson is cutting some fine Kaiserin. "Which do you like best, Kaiserin or Bride?" is now a question often asked; both varieties have their admirers, some claim that for general usefulness the Kaiserin is the best, as it is good all the year round while the Bride is worthless in summer (Foulds' excepted). Edwin Lonsdale says that Kaiserin with him is the most profitable, or we should say proves to be more prolific, than the Bride, and as they generally command the same price we presume the first assertion is correct. Paper whites and Romans are now to be had in quantity at from \$3 to \$4 per hundred, valley is plentiful at \$4.

Quite a number of the florists of the city and vicinity attended the lecture given by Dean Hole last Tuesday evening, his sub-

ject was "Famous men whom I know personally." On the desk by his side as he spoke was a vase of some two dozen American Beauty and Belle roses. The Dean is a fine specimen of manhood being six feet three and three-quarter inches in height; he seemed to be not over sixty or sixty-five years of age, yet he told his audience that the seventy-fifth anniversary of his birth would occur the next day. In opening his address he alluded to the beautiful roses at his side, saying they had been placed there by his brother florists of Philadelphia and that ever since he landed in New York and in his tour about the country he had continually met with such evidences of their good will.

Charles Fox of Broad and Master has sold his property and will remove to another location in the spring; the price was \$45,000.

John Walker is slowly recovering from an attack of bronchitis, which has kept him in the house for the past month.

There is to be another effort to establish a wholesale market in this city and a call signed by a goodly number of florists calls for a meeting to be held at the Florists' Club rooms on Tuesday, December 11th. May the movement blossom out and bring forth fruit abundantly. K.

Buffalo.

Thanksgiving was a good day. The weather was fine, enabling people to get about with comfort, and trade among the florists was the best it has ever been on that occasion. This holiday is beginning to rank up with Christmas and Easter, although a long way behind yet. It was a great chrysanthemum day and cleaned up the stock of the autumn queen at most establishments.

Now the "mum" is done for another ten months at least a slight report of how it has gone here would be in order; briefly then it has lost none of its popularity, on

the contrary good flowers have brought at least 25 per cent more than they did last year. No one has got tired of them and a larger class has bought them. No florist need fear that they are going to drop out of fashion; they are too grand and gorgeous for that, and instead of any florist wishing they did not exist we should all be thankful for their presence in October.

Mr. James Milley has had a grand lot of *Lilium Harrisii* for the past month. He seems always to be first in the field and does them well.

Mr. Christenson did not go heavy into "mums" but he has a grand house of carnations; his flowers are very fine and plants entirely free of disease. The varieties he grows are Daybreak, Sweetbrier, Silver Sprav and Wm. Scott. Finer flowers of old Silver Spray the writer has not seen in a long time, showing that this grand old variety is still good when well done.

The flowers greatly in demand at Thanksgiving, besides chrysanthemums, were carnations and violets, of which there was not enough to go round. Violets touched high water mark, \$3 per hundred retail. W. S.

New York.

They did, nobody believed they would be so unwise in these enlightened times, but they did, a big majority of them, hold back their roses for Thanksgiving. Not for a week or two as of yore but for a day or two and sufficiently to overload a market which was none too strong and to ruin any possibility there might have been of making the reasonable advance on market rates which the occasion and the approach of December might warrant. It seems almost incredible that men with the sagacity and common sense supposed to characterize the New York growers, and especially in the light of the uniformly adverse experience of previous years, should persist in this absurd and suicidal practice. Vigorous denials count for nothing until it is otherwise explained how it happens that the cut of an establishment averaging five, six or eight hundred roses daily drops to a meagre three hundred two or three days before a holiday and then jumps to fifteen or eighteen hundred on the day immediately preceding. Queer goin's on.

Thanksgiving Day was not much better than a Sunday as far as florists' trade in general is concerned. There was a rush on violets on that day as well as on the two succeeding days, the extra demand being caused by the college foot ball games, but it was not heavy enough to clean up the stock which had been unusually large for several days and had been in some cases held over. Had business been as lively as in some previous years there would undoubtedly have been a shortage of really good stock in most lines. There is quite a percentage of poor roses coming in, American Beauties especially being decidedly off in quality with some growers. Two growers who have reason to be proud of their roses just now are Littlejohn and Frank McMahon. *Harrisii* lilies are being received in larger quantities than has been customary at this early date. They are of excellent quality. Roman hyacinths are getting plenty, but not many narcissus are seen as yet.

F. Sander & Co. will have another big sale of *Dendrobium Phalaenopsis* *Schrodlerianum* and other useful florists' orchids at Rolker's auction room on Friday, December 14.

St. Paul, Minn.

A chrysanthemum exhibit was held in this city November 14 to 17 by Mr. A. S. Swanson. The entire exhibit, which was quite an extensive one, was made by Mr. Swanson and much credit is due him for the energy and enterprise displayed in conducting it.

One large store room was devoted to cut blooms and table and wedding decorations. The display of cut blooms was good and was augmented by some choice varieties from eastern growers. The decorations were nicely arranged, one table decorated with Testout roses and adiantum ferns being especially attractive. A bower of palms overhung by a large wreath of pink "mums" suspended by ribbon formed an inviting nook for Hymen's candidates.

A large room in the rear was well filled with pot plants and another large room in front contained a large and select assortment of all the leading varieties including the Chicago prize winners of last year and this.

The exhibition was not well patronized and was not a financial success. It is doubtful if Mr. Swanson cleared expenses. This is to be regretted as Mr. S. has always taken a great interest in florist circles and has done much to uplift the standard of growing and selling good stock and has been the first one in the city to give the people an idea of what a flower show is. An admittance fee of 25 cents was charged, one-half of which was donated to charitable purposes.

L. L. May & Co., in connection with their neighbors a book and stationery store on one side and a large music house on the other, had a fall and holiday opening November 22. The entire building, including offices, store and warerooms, were thrown open to the public for the first time. A band of music ensconced behind a bank of palms and ferns added to the enjoyment of the occasion.

The store was appropriately decorated with palms, "mums" and other pot plants. One of the large show windows contained a mantel decoration, while the other was lavishly supplied with cut flowers and potted plants artistically arranged. In the center of the large sales-room was placed a table finely decorated with a center piece of Mme. Testout roses while pink ribbons and pink roses indicated each individual place. Near this stood a smaller table with an immense basket of fruit decorated with ferns, bouvardias and other small flowers.

The second floor of their establishment is devoted to offices and their catalogue trade while the third is used for filling and shipping their wholesale orders. A large store room in the rear of their cut flower business on the first floor and a large light and handy cellar for their potatoes completes the establishment. Their new refrigerator is octagonal in form with large panels of French plate glass.

The monthly meeting of the Society of Minnesota Florists (which interpreted means the florists of the twin cities, though all in the state are welcome) was held in this city the evening of November 19. The meeting was well attended and an interesting session held. Gust. Malmquist, of Minneapolis, read a paper on the "Evils of Department Store Flower Sales," also quite lengthy extracts from articles published in a trade journal on the same subject. In substance he said that the important question now with the Minnesota florists was not how to grow good stock but how to sell it. Depart-

ment stores have reduced prices, hurt sales and threaten to ruin the retail store trade. In face of all this growers have built more houses and increased their facilities thus tending to reduce prices still further and to increase competition. Unless there is a change soon the smaller flower stores will be driven out of the business entirely.

The paper was then informally discussed by several, while all were agreed as to the facts of the case as presented in the paper opinions differed as to the method to be employed to counteract this dangerous rivalry, and the discussion ended without any apparent headway being made towards solving the hard question. One of the speakers maintained that the growing of the stock was the important question after all. That the best stock would always command good prices and that department stores with bargain counters were naturally looking for cheap and inferior stock and will buy it as long as it is grown.

A committee of three from each city was appointed to confer and report at the next meeting on a chrysanthemum show for 1895. The committee consists of Messrs. Nagel, Bartels and Malmquist of Minneapolis, and Swanson, Vogt and Souden of St. Paul.

Mr. Louis Wilde was appointed speaker for the next meeting to be held next month in Minneapolis.

A large retail clothing store has been selling "mum" plants at a 15 and 25 cents each and cut blooms at 50 cents per dozen. In their advs. they state that the plants, on account of their hardy nature, will stand several degrees of frost without injury. How soon this flowery inducement would congeal if exposed to a few degrees of veracity. FELIX.

Chicago.

A great scarcity of stock has prevailed all the week. Every line of stock has been extremely short, and it is not surprising therefore that prices have remained at the high water mark of Thanksgiving week. As compared with prices of a year ago for the corresponding week prices are double that of last year in most classes. Roses during the first week in December last year sold at from \$2 to \$3, with the lower figure as the ruling price, while in the week just past stock rated as barely fair in quality easily commanded \$4 to \$5. Although the weather is and has been exceedingly fine for a week past there seems little prospect for much increase in the supply for the next week or ten days. Crops of both roses and carnations are off, but the majority of the growers point to the probability of a full crop for the holidays. "Mums" have almost entirely disappeared; this of course accounts in a measure for the increased demand in other lines. It is needless to say that Beauties remain in the lead. This is the only rose that never at any time during the very worst of the chrysanthemum glut suffered for demand or declined in price in a material degree. The output of this rose is estimated at an increase over last year by about one-third, and yet scarcely a day passes when the stock isn't fully exhausted in the early morning hours. Meteors are beginning to show more and more that objectionable blue-black color which renders a good part of the stock unsalable. Mermets too are sadly off color, and in this condition are hardly salable even in the present scarcity of roses. The quality of Bride, Bridesmaid and Perle is somewhat improved. Testout

remains good and so is Kaiserin; the latter, though, is very scarce.

Carnations hold very stiff at \$1.50 for fair common, some fine lots of ordinary varieties selling as high as \$2, and fancy at \$2 to \$2.50. Violets remain away up on top. First quality command \$2 per 100, fair quality go at \$1.50; demand in excess of supply.

Shipping trade continues very brisk, local demand steady.

Alderman M. B. Madden is again at work on his plan for the extension and beautifying of the lake front park. His plan contemplates filling in the lake basin to within 750 feet of the government breakwater with the soil being excavated from the drainage canal and which is now being dumped in deeper water, thus adding many acres to the area of the park, the made land to be connected with the present park by bridges at grade, the railroad tracks to be depressed for the purpose. A striking new feature has now been added to the scheme, which is the reproduction of the Court of Honor at the World's Fair on the reclaimed land. It would require about \$10,000,000 to erect the buildings in white marble or granite, as proposed, but it is said that assurances have been given that the amount would be contributed if the site is secured. The committee of the Horticultural Society of Chicago will assist Mr. Madden to the extent of its power, and hopes to see a horticultural ball made a feature of the park if the project is successful.

Washington.

Thanksgiving trade was very good this season, most of the florists having disposed of their entire stock before the day was over, and stock was rather scarce. There was but a slight advance in prices, which may account for the good sales.

From present indications the demand for carnations this season is going to be very brisk. There are some very fine ones now on the market, and the price is advancing. Good flowers are bringing from 35 cents to 50 cents per dozen.

Chrysanthemums are mostly over, with the exception of a few late varieties. There are still some very good blooms to be had at \$3 a dozen.

Roses seem to be off crop about Washington at present, as none of the florists have enough home grown stock to supply their trade. In fact I may say roses are scarce. Poinsettias are with us again, though as a rule they are not up to the standard in quality. They are not much in demand yet, and are retailed at \$3 a dozen. Violets are rather scarce and in brisk demand. The price has advanced to \$1.50 per hundred. Romans are coming in quite rapidly and are very good. They sell at \$1 a dozen. Valley is not very plentiful, and the quality nothing to brag of, though it brings \$1 a dozen. Roses are sold by the florist at the following prices: Beauties from \$6 to \$9 a dozen, La France \$2, Brides and Mermets \$1.50 to \$2, Perles \$1.

The opening of the second session of the 53d Congress was as usual a red letter day with the florists. The floral display was something unusual. Nearly every desk in the house had some sort of floral piece on it. On some desks were huge bunches of Am. Beauties tied with ribbon, on others were La France and Brides, while on others were baskets of flowers.

The Senate looked like a wedding reception hall. The flowers were very profuse and beautiful. The largest piece, a tremendous shield of immortelles, across the

face of which were the words "New Jersey" in blue letters, was placed on the desk of Mr. Smith.

Among the conspicuous pieces was a school house composed of flowers, also a beautiful floral ship.

The efforts of the late R. J. Halliday of Baltimore to popularize *Russelia juncea* are just beginning to bear fruit. Mr. H.'s admiration for two handsome vases of this plant induced him to have them photographed and used to illustrate his catalogue some ten years or more ago. It does excellently well as a window or house plant, is very graceful and thrives in light rich soil and is easily propagated from cuttings. It is a native of Mexico.

Mrs. J. D. Sayers, the wife of Hon. J. D. Sayers of Texas, one of the leaders of the House of Representatives, says Roman hyacinths spread like garlic in her yard and that she has no doubt but what quantities of them will soon be grown in her state and the south for the northern markets. She has been experimenting with them the past few years and is more than pleased with the results.

Gude Bros. have added five houses to their plant at Anacostia. These houses which they justly term model houses were begun September 1 last. They are each 16x200 feet and are constructed on the most improved plans, glazed with imported glass 16x24 and have received three coats of paint. They are all piped and boiler is in position nothing remaining to be done except connecting the boiler with pipes. They did all the work themselves, not a mechanic being employed in their construction. It is certainly a credit to them; they claim that this is the quickest work on record. Three of these houses are already planted with carnation, of their own growing, which are the finest to be seen in the District of Columbia. One of these houses they are going to use as a palm house in which they propose growing their plants used for decorating. They see the necessity of carrying a larger stock of this class of plants and think it more profitable to keep it over from year to year and grow it on, than to put in new plants at the beginning of each season. Another of these new houses is to be used this season for violets; next year they will plant it with roses. Their roses are looking unusually fine, in fact everything about their establishment gives evidence of being managed by keen, wide awake men who thoroughly understand their business. Their violets are looking fine. They have a large quantity of bulbs for this season, while many cut their order for bulbous stock this year they have rather increased theirs. They claim that when the season opens for this class of flowers the people will demand it and will not be satisfied with any substitute. Experience they say has taught them this and they have made provision for it.

REYNOLDS.

St. Louis.

Trade during Thanksgiving week reminded all of the good old fashioned times that one hears so much of. Thanksgiving heretofore has not been looked forward to as much out of the ordinary, but if the future is to continue bringing the same demand it will take rank as an important day. The orders in were all placed early so that dealers knew what was coming, but in spite of this several were caught with stock in short supply. The excellent shipping orders for the few days preceding, and the good home trade shortened stock up considerably, so that everything

was sold out early on Thursday. Prices advanced a point about that time, but could not be laid to Thanksgiving; it was simply the increased demand prevailing during the week. All stock has been scarce since that time, owing to the week of dull rainy weather succeeding it.

Some few Romans are coming in regularly, and occasionally narcissus, but nothing like the amount that has been received during former years at this time. It would appear that the losses sustained during the last few years by bulb forcers have at last taught them to be more careful in regard to the quantity thrown upon the market. Violets have been in somewhat scarce supply, the main reliance being on home grown stock. Southern grown stock for some reason, presumably early frost, has not been received in any quantities as yet.

The sharper who was noted last week as working the various stores has been apprehended; he has been working the hotels for lodging and was caught by one of them. He expresses himself as being willing to take whatever punishment may be given him for his misdeeds, and will doubtless be set out of mischief for some time to come.

R. F. T.

New Notes.

LANCASTER, PA.—Wm. S. Barnhold has opened a florist store in the Postal Telegraph office.

TAUNTON, MASS.—A small conservatory belonging to Chas. Webster was damaged by fire on November 23.

PATERSON, N. J.—Fire caused a damage of about \$1,000 at the greenhouses of G. W. Vreeland November 21.

MEMPHIS, TENN.—The chrysanthemum show of the Memphis Floral Co. was a pretty well managed affair and attracted many visitors.

POSTORIA, O.—Mr. Fred W. North of the Postoria Floral Co. was married Thanksgiving day to an estimable young lady of Mt. Vernon, O.

KNOXVILLE, TENN.—The Knoxville Floricultural Society has decided to give a spring show. The chrysanthemum show came out about even financially.

BARRE, VT.—Fairview Greenhouses recently sold by Wm. Clark to a man named Austin have again been disposed of to Elton Wheeler and Mrs. L. P. Austin.

MOORESTOWN, N. J.—The warehouses and greenhouses of the Rogers Nursery Co. were burned on the night of November 25. Cause, the explosion of a lamp. An employe, James Davidson, was severely burned. Loss \$10,000, partially covered by insurance.

ROCHESTER, N. Y.—Bowling teams of nurserymen and florists had a warmly contested match November 29. The nurserymen defeated the florists in three games. The first and last games were very close, being won by only six pins each, but in the second one the florists were buried under a majority of fifty-three pins. The teams were made up as follows: Nurserymen, Charles F. Chase, H. C. Phillips, J. C. Sharr, F. J. Farber, George Jennv, Herbert Caudee, E. O. Graham and J. B. Howe. Florists, Charles Swift, Edward Vick, F. J. Keller, George Savage, D. Salter, J. Keller, Charles Vick and A. Salter.

DETROIT, MICH.—Mr. Harry A. Balsley was married November 14. The bride was Miss Mabelle Louise Reeves.

LONDON, ONT.—Mr. Chas. M. Greenway having taken the store formerly occupied by J. Dilloway, florist (248 Dundas street), put in a fine plate glass front and hot water heating apparatus, new counters and electric (incandescent) light. Has a handsome plate glass case 30 feet long for straw goods and supplies. The store was opened September 13. Mr. Will S. Greenway is as usual in good shape for "mums" in which he seems to excel.

SPRINGFIELD, MO.—A chrysanthemum show was given here November 6 to 10 by the Chalfant Conservatory, W. A. Chalfant, proprietor. Over 180 varieties were shown, including 56 of the novelties of 1894 in 3-inch to 12-inch pots and a large number of bench grown plants. Some flowers were very well done, as Mr. Chalfant easily captured the first prize for 45 blooms in 15 varieties at St. Louis. The show here was appreciated by several thousand visitors, florists and amateurs alike.

DAVENPORT, IA.—At the banquet following the recent chrysanthemum show the Tri-City Florists' Club was organized with officers as follows: Wesley Green, president; Charles Dannacher, vice-president; A. W. Vander Veer, secretary; J. H. Harrison, treasurer; Mrs. F. L. Bills, corresponding secretary. It was resolved that any resident of the tri-cities (Davenport, Moline and Rock Island) interested in floriculture might become a member by paying annual dues of \$1, and it was also decided to hold a chrysanthemum show in November 1895, in the Library block, and for the benefit of the Library association. Meetings will be held on the second Wednesday of each month, at 8 p. m. Committees were appointed as follows: Executive, W. H. Knees, Henry Gaethje, Mrs. C. M. Crow. By-laws, Wesley Green, John Temple, F. L. Bills. Program and entertainment, Mrs. Dannacher, Mrs. Knees, Mrs. Gaethje, F. G. Bahr, H. G. Pauli, C. M. Crow.

SITUATIONS, WANTS, FOR SALE.

Packing Flowers for Market.

The views expressed in Mr. C. H. Allen's carnation notes last week regarding the packing of blooms for market are well timed and in accord with the progressive spirit which should animate all growers who would strive to attain high rank in their profession. Volumes have been written and all the resources which ingenuity, experience and skill can suggest have been drawn upon in the effort to produce the highest perfection in quality at a minimum cost, but unfortunately here the effort stops with many, and much of the legitimate fruits of their labor is lost through the careless or ignorant after-handling of the stock. To be convinced that the advance in packing cut flowers has not kept pace with the progress made in their production, one needs only to make a morning visit to any floral establishment where flowers are received in quantity, and observe the shipments from the different growers, as they are opened. It matters not how fine the quality of the flower may have been, when gathered, if when it reaches the hands of the consumer it is discolored, bruised or faded. This is the time when quality counts for something. If a flower is good to start with, it pays to handle that flower as though it was the only one in the box. The fruit men have come to realize this. Peaches travel across the continent, every specimen in its separate wrapper of tissue paper; cherries are packed one by one in flats, as if each cherry were a jewel, and they arrive after travelling thousands of miles in better condition than they would have been in twenty-four hours, if heaped carelessly into a basket. This takes time, and adds no small item to the expense account, but the fruit growers have found out that it pays in the end. The cut-flower people have got to come to it, too. To none does this apply with more force than to the carnation growers. Mr. Allen's advice to them touches the right spot, and if literally followed will mark the beginning of a new era, almost, in the carnation business.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

Boston.

At the December meeting of the Mass. Horticultural Society the following resolutions relative to the Distribution of seeds by the Department of Agriculture at Washington were passed by a unanimous vote:

WHEREAS, more than half a century ago improved varieties of seeds were sent out by the official then in charge of that work at Washington to farmers and gardeners of the country in order that such seeds might be tested and their practical value ascertained, either over others already in use, or as to their value for introduction and cultivation;

WHEREAS, we recognize that the present distribution of seeds from the Department of Agriculture does not meet the original intention, as herein indicated, and has grown to unreasonable dimensions (and has become a gratuitous distribution of seeds that the recipient often is unwilling to use) and cost of such distribution in 1893 having been \$160,000;

We, the members of the Massachusetts Horticultural Society, assembled by our representatives in our hall at Boston, respectfully recommend to the Congress of the United States that the present method of, and appropriation for, the distribution of seeds be abolished; and that in its stead an appropriation be made of sufficient amount (\$35,000 suggested) by which the Department of Agriculture can distribute to the experiment stations now located in almost every state and territory, such seeds as may to the said Department seem wise, and require a report upon the same from the stations, the stations to perform the required work under the appropriation provided for annually, and direct that the Secretary send copies of these experiments to each of our Senators and Congressmen, and the Secretary of the Department of Agriculture at Washington.

New York.

The rush is all over in the seed stores and there is nothing in prospect for the present except catalogue making, on which some are still busy, but which several have already completed, and these fortunate ones are "preparing for a six weeks' loaf," as one of them expresses it.

There has been a big demand and immense sale for mushroom spawn this season, far ahead of any previous record.

Visiting New York: Mr. Jos. Meggatt, Wethersfield, Conn.; Alfred J. Brown, Grand Rapids, Mich.; C. C. Morse and J. W. Kimberlin & Son, Santa Clara, Cal.

Mr. E. Schaettell of Vilmorin & Co. sailed for France per steamer La Bretagne on Saturday, December 1, after a three months' trip in America.

THE damp weather in England has delayed the drying and shipping of the seed crops of mangels, beets, nasturtiums, etc.

SWEET CORN prices are probably a shade easier, the harvest not proving as short as was anticipated.

THE Sioux City Iowa Journal reports that the Sioux City Nursery & Seed Co. have taken in 75,000 bushels of peas and beans this season.

A BREAK is reported in market on sac caline.

VISITED CHICAGO: C. C. Morse, A. J. Brown, H. A. Salzer, R. H. Shumway, C. E. Angell.

MR. W. ATLEE BURPEE has been ill for about three weeks. He is still weak, but improving. His physician prescribes rest and an extended trip. His many warm friends in the trade hope for his speedy recovery.

WITH rather a dull wholesale trade at present and while printed list prices are somewhat stiff, there seems to be more than the usual inclination at this time of the year to shade rates a little for immediate order.

MARBLEHEAD, MASS.—Mrs. Harriet Gregory, wife of Hon. J. J. H. Gregory died at her summer home at Middleton on November 29 of heart failure after an illness of about a month, at the age of sixty-five years.

DISSOLUTION OF CO-PARTNERSHIP.—The co-partnership heretofore existing between Charles Frederick Lohrman, Wilbur Brotherton and Philip Breitmeyer, under the firm name of Lohrman, Brotherton & Co., seedsmen, is this day dissolved by mutual consent. Frederick Lohrman and Philip Breitmeyer will continue the business under the name of the Lohrman Seed Co., which assumes all liabilities, and all outstanding accounts must be paid to them.

Mention American Florist.

Toronto.

The regular meeting of the Gardeners' and Florists' Association held last week was largely attended, many of those who have been rather remiss in their attendance lately being present. With the exception of general congratulations all round at the success of the chrysanthemum show and the nomination of four and the election of two new members not much business was done, and the meeting adjourned early until the 18th inst., when the annual election of officers for the ensuing year will take place. Mr. H. A. Bunyard (whom I omitted to mention was present at the show) read a parody of his own composition on the well known poem, "My Mother," entitled "The Florist." It will no doubt shortly appear in print.

Business which since the cold weather set in has been quite lively seems from some cause or other which "no feller can understand" to have fallen off greatly this week. "The bottom has fallen out of it," "It's rotten," and other choice remarks to the same effect are heard on all sides. Probably it is only because people are saving up for Christmas.

The vases and jars made purposely for the show were a great success; they were made to order by a local firm of potters, glazed and colored a dull green; there was nothing in them to detract attention from the flowers.

I have heard some of the boys betting that they can beat the others growing chrysanthemums next year. This is the right spirit, and it makes the prospects for a better show than ever next year bright.

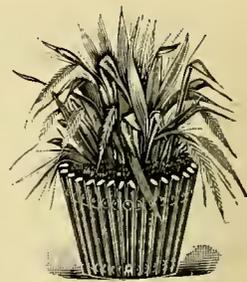

I read murmurings from the east that chrysanthemums are played out, but before swallowing this I should like to ask a question or two. What better time could he had for holding a show than during November? What better or easier grown flower could be had for making a good bright show? What commercial flower is more susceptible to the hybridizer's art, and with such quick results? What better opportunity could be found to show indoor grown roses and carnations than at a chrysanthemum show? What would boom horticulture generally among the general public more than a chrysanthemum show?

If you have not got chrysanthemum James Eadie, get it.

A number of the newer chrysanthemums mentioned by Mr. E. G. Hill in the last issue of the FLORIST were shown here, viz., Mme. Chas. Molin, James Comley, Mrs. Geo. West, Mrs. H. McK. Twombly, Wanlass, etc. E.

H. E. CHITTY, Paterson, N. J.

Worcester, Mass.

A very decided improvement in trade is noticeable since my last letter and it looks as if business had at last settled down to a reasonable steadiness after the many ups and downs experienced during the summer and autumn.

The Thanksgiving of 1894 has eclipsed all the other Thanksgivings, in the magnitude of business and this old New England holiday bids fair to rival Christmas and other red-letter days in the life of the florist. Roses, carnations and violets were scarce and if it had not been for "mums" flowers would have been scarce. There was an unprecedented demand for Wilder, Albertini and other light pink carnations and the supply was rather short. Trade was confined almost entirely to loose flowers, with a few baskets and center pieces to relieve the monotony.

The weather is not very favorable to growers as dark days are the rule rather than the exception. As yet we have not had very severe weather. Lange brought in the first Romans November 20.

A. H. L.

Express Rates.

Do express charges have to be prepaid to secure the 20% reduction, and does the special rate include bulbs as well as plants? Our agent here says the charges must be prepaid. Is he right?

W. R. T.

The rule reads "Prepaid or guaranteed." Therefore if the payment of the charges is guaranteed by the shipper they need not be prepaid. The 20% reduction does not apply to bulbs.

Greenhouse Building.

PITTSFIELD, MASS.—Geo. W. Burbank, rose house 70x15 feet.

SALEM, MASS.—Greenlawn Cemetery, one plant house.

Florida By Lookout Mountain.

Tourists and others in choosing a route to Florida should not miss the opportunity to visit Lookout Mountain, scene of the famous battle "Above the Clouds," with its magnificent "Lookout Inn," now open. It would be well, therefore, to bear in mind that the Nashville, Chattanooga & St. Louis Ry. is the only line passing around Lookout Mountain. "Dixie Flyer" through sleeping-car by this line from Nashville to Jacksonville, Fla., carries you in daylight via grand old Lookout Mountain, Kennesaw Mountain, Atlanta, Macon and Tifton. Quick-step through sleeping car line over same route St. Louis to Jacksonville leaves St. Louis 7:50 a. m. and Nashville 9:10 p. m. daily. Sleeping car berth can be reserved through from Chicago to Florida. Address Briard F. Hill, N. P. A., 194 S. Clark St., Chicago, Ill.

NEW CHRYSANTHEMUMS.

MRS. W. H. RAND.

HOLLY

It is conceded that the successful delivery of perishable stock in the best condition exactly when demand is active is secured only as the result of considerable experience and close study of all the controlling conditions. During the past ten years we have studied these conditions and have the experience. We have faith that we can supply "First-Class Stock on Time," and to prove our faith by our works, on all orders given us in season, we will guarantee arrival or no pay. We attempt no competition in price with stock which has never yet arrived, or—arrived after Xmas. "A Case of Holly in front of the store is worth four (4) on the cars."

NEW YORK,

VAUGHAN'S SEED STORE.

CHICAGO,
146-8 W. Washington Street.

GREENHOUSES, WESTERN SPRINGS, ILL.

MRS. WM. H. RAND.—Certificate. A distinct variety of Japanese type, in color a remarkably rich yellow. Petals fine, long, twisted and irregularly reflexed, making it resemble a tangled mass of large gold thread. Highly commended by the judges at Chicago, and pronounced the most attractive and strikingly graceful flower at the show. Trade price, 50c.

CRYSTALINA—Certificate. Snow white, medium size flower; snowball type, quite distinct and early. Trade price, 35c.

JAYNE—Special mention. Dark shaded rose, high built, regularly formed, incurved blooms. Very strong stem, first-class foliage, well up to flower. For exhibition or pot plants highly commended. Trade price, 35c.

MRS. MOSES J. WENTWORTH.—Special mention. Large rich yellow, full and deep, strong, compact habit; an improvement in the Chinese class. Trade price, 35c.

BURT EDDY.—Special mention. An immense flower for exhibition. Full and double. Stem and foliage good, silvery rose and purple; an improvement in this class. Trade price, 35c.

WILLIAMS & SONS CO., Batavia, Ill.

Newton, Mass.

The annual meeting of the Newton Horticultural Society was held on November 10. Officers were elected as follows: President, D. D. Slade; vice-presidents, J. H. Woodford and E. W. Wood; secretary, L. H. Farlow; treasurer, A. T. Sylvester. A report by the Tent Caterpillar Committee showed that over 57,000 belts of eggs had been collected and brought to the committee in competition for the prizes offered for the largest number of belts. The capital prize of \$10 was won by P. C. Barton, with 14,000 belts.

Mr. Gane, the originator of the beautiful Mrs. Jerome Jones and several other fine chrysanthemums, has a number of new seedlings this year that promise well. We cannot have too many amateurs like Mr. Gane.

Portland, Ore.

A successful show was held here, opening November 21. Clarke Bros. made the largest display, entering in several classes. Martin & Forbes, H. Lowitz and Mr. Walch were other florist exhibitors. There were numerous exhibits from amateurs. Prizes were offered for table decorations and designs, as well as chrysanthemum plants and flowers. Much interest was shown in the exhibition.

How to Make Them Last.

A Topeka chappie boy made a chrysanthemum last four days. He put it in water at night and brushed it with a curry comb every morning.—*Topeka Journal.*

Lenox, Mass.

The first annual meeting of the Lenox Horticultural Society was held at the society's rooms on Saturday, December 1. The following gentlemen were elected officers for 1895: President, Martin Finaghty; vice-president, A. McConachie; secretary, A. H. Wingett; treasurer, H. P. Wookey.

Reports of the secretary and treasurer showed the society to be in excellent condition, it having raised its membership from twelve in February to eighty-four in December. Though the year has been one of heavy expenses the report showed a balance in the treasury of nearly \$400. The members are all most enthusiastic over the progress the society has made, which far exceeds the imaginations of the most sanguine. Very able essays have been read by a number of the members and will continue at all the meetings during the coming winter. A hearty vote of thanks was extended to the retiring officers. W.

Prudence versus Football.

There is much hilarity among the boys at the expense of two of the young seedsmen of Boston. These wide-awake young men are football enthusiasts, and the Harvard-Yale match had for them an undefinable fascination not to be resisted. They purchased premium tickets, and at an early hour on Saturday morning a rushing express bore them towards Springfield. They sprang jokes on the way and were happy. Their goodly rolls, frequently displayed, evoked the cool jealousy of the college boys who were fellow passengers.

Once in Hampden Park their enthusiasm knew no bounds. That inborn business instinct hidden beneath the superficiality of every seedsmen came to the surface and the boys determined to make money. They would back Harvard; she was about to win, but anyway they would back her. They did back her; she didn't win, and here is the sequel:

Sunday morning, Two stranded young men with blighted hopes ruefully, sleeplessly occupy a room in a Springfield hotel and anxiously—Oh, so anxiously!—await an early mail which is to bring that bright angel of comfort—a remittance from home.

Moral: Don't wager on the results of a precarious football contest what you have taken a year to save behind the seed counter. F. B.

MARLBORO, MASS.—Mr. Rufus Howe, for many years a market gardener and florist in this town, died on December 3 at the age of 92. He was superintendent of Mt. Auburn Cemetery at Cambridge between forty and fifty years ago. He was a man of kindly impulses and well deserving of the high esteem in which he was held by all who knew him.

CHATTANOOGA, TENN.—The display by Mrs. J. W. Crouch at the recent chrysanthemum show was said by experts to be the best ever made by a southern lady florist. She carried off all the first prizes for plants and cut blooms with but two exceptions.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

The Arrangement of Flowers.

XIV.

MANTEL DECORATIONS.

The mantel decorations at the recent Chicago exhibition were so varied in character that a review of same, with illustrations, will undoubtedly prove of interest in this department.

No arrangement of plants or flowers can be so perfect that it can not be criticised from some point of view, and as judicious criticism is always educational we shall criticise as well as commend.

It is gratifying to be able to say that the mantels displayed this year showed generally a decided improvement over those of former years, though in the majority there was a lack of flowers. Decorative plants are not only desirable but necessary in such decorations, but should we allow them to crowd out the flowers entirely? On all the seven mantels there was but one vase of roses, and no carnations. Several of the points made by the lady judges were unquestionably well taken.

First, the upper part, from the mantel shelf to the top, around the mirror to the over mantel, if there be one, should be treated as the main feature, for the reason that when the rooms are crowded with guests that part of the decoration below the mantel shelf is entirely lost to view. We must, however, not make the mistake of supposing that the base of the mantel should be entirely neglected. Here again the ladies throw out a hint that should be heeded: "Don't arrange little plants in 3-inch pots on the floor in such a position that the train of ladies' dresses in passing might sweep them from their moorings." And another point well taken is: "Don't carry your side groups of plants beyond the line of the fender at farthest." And again, to quote the lady judges showing their good sense: "The plants at the base should be of a nature that would stand some amount of brushing against without injury to the arrangement or damage to the material. When side groups of palms and plants of that nature are used the treatment of the fireplace should be of a different class of plants; two or three pots of ferns, say *A. gracillimum* with their light green airy fronds would form a fine contrast to the darker foliage of the palms."

Now let us analyze the different exhibits somewhat in detail and at the same time try to figure out as nearly as may be possible the commercial value of each; in other words what can such a decoration be furnished for at a fair profit to the florist? This is a rather difficult question when we have to take into consideration the fact that in some of the mantels at

least some tender and high priced plants were used such as are invariably ruined in a short time and must therefore be reckoned in at their full value. This material we must therefore eliminate to a certain extent. In most instances other material could be substituted with nearly the same effect. Then again the florist who owns his own decorative plants has the advantage over he who does not. The latter has no difficulty in renting his palms, dracænas, pandanus and all the other more hardy varieties, but when it comes to ferns, fancy caladiums, orchids in bloom or anything else in this line he will have to buy them outright, but if he can use them for some purpose afterward this may lessen the cost. Our estimated cost must therefore vary according to the facility with which the material can be had.

The mantel arranged by Anthony & Curran, which took first prize, was well worthy of the award. The arrangement and grouping of the plants was simply perfect, the base was kept within proper bounds on the floor space, and the sides well defined and expressive. The shading of color also was very effective. In the tall group flanking the left hand side the dark shades of such palms as kentias, arecas and latanias predominate, while the opposite side was arranged with plants of a lighter green, such as Pandanus Veitchii, adiantums and other ferns. Starting from the right hand corner of the mantel asparagus was draped around the mirror, some 30 cattleyas being fastened into this draping with superb color effect. In the judges' opinion the bunch of two or three dozen lily of the valley placed squarely in the center of the mantel injured the artistic effect. We share the judges' opinion that it would have been better to omit the valley altogether, or else arrange them in the opposite corner from the orchids.

At what price could such a decoration be supplied? Thirty *Cattleya labiata* flowers will cost at present when stock is scarce 50 cents each, \$15; asparagus \$2, 25 valley \$1, use of hardy decorative material \$5, ferns and material liable to be damaged one-half value \$5, total \$29. We might make a cut in the last named item and reduce the cost a few dollars. At that rate \$50 would be a fair retail price, not counting our own time in arranging. We hope to see the time, however, when genuine skill and taste is appreciated, and when that happy time has arrived you may tack on an extra ten or twenty dollars. As times are at present, however, the best we can do is to be satisfied with a fair profit on our material.

Walter Kreitling arranged the mantel that took second. The mantel itself was of a style ill adapted for effective decoration, and under the circumstances the result was creditable to the designer.

The effect was too heavy, though, and the plant arrangement too massive. The caladium at the top, right in the center under the adiantum, didn't escape the judges' criticism; it had no business there. The plants though well arranged were lacking in judicious color tone; that is, the light and dark foliage was mixed together indiscriminately. If the vase of fifty "mums" had been reduced to one-half their number and the vase placed a little to one side, the effect would have been greatly improved. The treatment of the grate in ferns was good.

The cost of putting up this exhibit is probably considerably more than the figures we shall adopt, but stock less liable to injury could be substituted for quite a lot of the material used, and some omitted altogether, as for instance, the selaginellas at the base which were lost to view. A half dozen *Adiantum gracillimum* cost \$9. The cut fronds of these, however, after the plants have served their purpose, are worth one-half their cost. The cost would therefore stand somewhat like this: For loan of hardy decorative plants for one evening \$6; pot ferns, etc., allowing for salvage, \$6; 50 "mums," at 8 cents \$4; total \$16. The retail price would therefore be from \$30 to \$32.

W. J. Smyth's mantel, awarded third prize, consisted of a plant arrangement with a group of orchids of various forms in the right hand corner of the mantel shelf. Like the foregoing this also was somewhat overloaded, particularly the over mantel, where the arrangement of palms, araucarias, caladiums and adiantum gave a topheavy effect. The groups at the sides and base were well arranged but too little attention was paid here also to shading of light and dark foliage. The group of cut orchids would have appeared to better advantage if the various kinds had been grouped separately. The circular arrangement as placed produced a rather stiff effect.

This mantel could probably be reproduced at the retail price of \$45 to \$50. Use of plants \$15, orchids \$10.

P. J. Hauswirth's arrangement consisted entirely of plants. The arrangement of the upper part was a trifle sparse while the base on the other hand had some material to spare. The effect of the whole was pleasing, though showing in spots some raw edges. Some 15 minutes more work in putting on the "finishing touches" would have remedied this defect. In the judges' opinion the color harmony at the base was destroyed by using the scarlet anthurium and *Dracæna terminalis* in the same group. Undoubtedly the effect would have been better if either one or the other had been left out, yet as placed in the arrangement the colors didn't clash, as the plants in question were not placed closely together. The arrangement of the mantel proper was in *Adiantum Farleyense*, *A. gracillimum* and *Cocos Weddelliana*, with a half dozen *ypripediums*, a piece of *cattleya* in bloom, one of *odontoglossum* and another of *oncidium*. These were dotted between the ferns, thus adding a little color.

The cost might be figured as follows: Cost of decorative plants \$5, use of ferns and other plants liable to damage \$9, the orchids for general effect would have been as well cut, the cost of the blooms not to exceed \$4, asparagus \$2, total \$20. Retail price \$38 to \$40.

O. J. Friedman's mantel was a very showy affair. In the opinion of the judges too many kinds of flowers were used. The group of palms which flanked the left hand side of the mantel was splen-

didly arranged. A tall glass vase filled with a superb lot of American Beauties with stems 3 to 4 feet long being placed next to this group on the mantel shelf. The arrangement of this vase, and the position against the group of plants, was a bit of artistic work that must be seen to be appreciated. Next to the vase of roses was placed a low dish with lily of the valley; in the right hand corner a piece of *Cattleya labiata* with a half dozen fine blooms, and between this and the valley were laid some eight bunches of violets. The side group of plants, however, with a central figure of a jardiniere on pedestal filled with yellow chrysanthemums seriously injured the effect of the whole. No one can find fault with Beauties at one side and *cattleyas* on the other, but we must draw the line at placing orchids and chrysanthemum side by side. The base arrangement was also objected to by the judges on two points, first the groups were carried out 2½ feet in front of the fender, and second, the outer border of plants consisted of material in 3-inch pots liable to be brushed over and disarranged; besides the bare pots, which showed plainly, gave the base an unfinished appearance.

Cost: Loan of plants \$12, 2 dozen Am. Beauties \$6, 25 valley \$1, 200 violets \$3, 6 *cattleyas* \$3, 25 "mums" \$4. A. Farleyense \$2, total \$31. Retail price \$60.

H. F. Halle's arrangement consisted of a group of fine decorative plants of such kinds as are generally employed for house decorations. The group was built up diagonally across the width of the mantel from the floor on the left to the top on the opposite corner. On the left side was placed a glass vase of yellow chrysanthemums around which light sprays of asparagus were draped.

This mantel could be reproduced at a profit for say \$25 to \$30. Cost: Loan of plants \$8, 50 chrysanthemums \$5, asparagus \$1, total \$14.

In a later issue we shall give illustrations of simpler and less expensive mantel decorations.

An Elaborate Wedding Decoration.

At a recent Washington wedding the drawing room was draped in white mull arranged in soft folds about the walls and festooned over the doorways and arches. The ceiling was covered with the same material, resembling a sun burst radiating from the chandelier. This was delicately traced after the same style with *Asparagus plumosus*, only the fine thin sprays being used. The chandeliers and walls were festooned with asparagus also and near the ceiling it was so arranged as to form a frieze of festoons. The doorways and arches were decorated with the same material.

In the bay window before which the bride and groom stood during the ceremony, the entire front was filled from floor to ceiling with *Adiantum cuneatum* in pots, face out, forming a wall of maidenhair ferns having a central mirror 4x5 feet. On the lower right hand corner of this mirror rested a monogram, the initial of the bride being made of valley and that of the groom of violets. Across the upper left hand corner was a long spray of *Dendrobium formosum giganteum*, giving a richness to the entire window.

Immediately above where the contracting parties stood was a chime of five bells of white chrysanthemums with clappers of purple violets. The bells were very delicately sprayed with valley and asparagus on the front, relieving the stiffness of the "mums." These bells were tied

with white ribbon six inches wide, forming a true lover's knot. Above these again on the archway of asparagus was another much larger lover's knot in broad sash ribbons, the ends of which fell in graceful waves losing themselves in the asparagus on either side of the bay window.

The handsome mantel, opposite the door entering the drawing room, was banked with *Adiantum Farleyense* extending about half way up the large mirror. At one corner was a huge cluster of fine specimens of *The Queen chrysanthemum*. This mirror was draped with delicate sprays of asparagus. At the top corner over the chrysanthemum was a large bow of 12 inch sash ribbon, one of the ends waving across the glass, losing itself in the asparagus at side of mirror, the other end falling in graceful waves to the side of mantel. In each corner opposite the bay window stood a large vase of *Queen "mums,"* some eight feet high. On the piano were two vases filled with the same flower.

In the second drawing room the mantel was banked with *Adiantum cuneatum* studded with American Beauties, while the fireplace was filled with *Nephrolepis davalloides furcans*. Directly opposite this was a screen formed of palms and ferns, the pots being covered with southern smilax, out of which arose two large bunches of American Beauties. Behind this screen the orchestra was placed. The walls of this room were festooned with wild smilax, while the arches of doorways were covered with mull and festooned with asparagus. The only flowers used in this room were Am. Beauties, and they were in every conceivable place capable of holding them.

In the dining room the decorations on the table, as well as on the mantels and about the apartments on every side, were of American Beauties. The centerpiece was a plaque about five feet long of *Adiantum Farleyense* and Am. Beauties. At each of the corners of the table was arranged a drooping bunch of Beauties almost reaching to the floor, *Farleyense* being the only green used on the table and Beauties the only flowers. At one end of the dining room was a mirror extending from the ceiling to the floor, in front of which was banked a handsome arrangement of palms and ferns. Above this was an immense bunch of long stemmed Beauties. The mantel in this room was banked with *cuneatum* and thickly studded with Beauties, the mirror being festooned with southern smilax, as was the entire room.

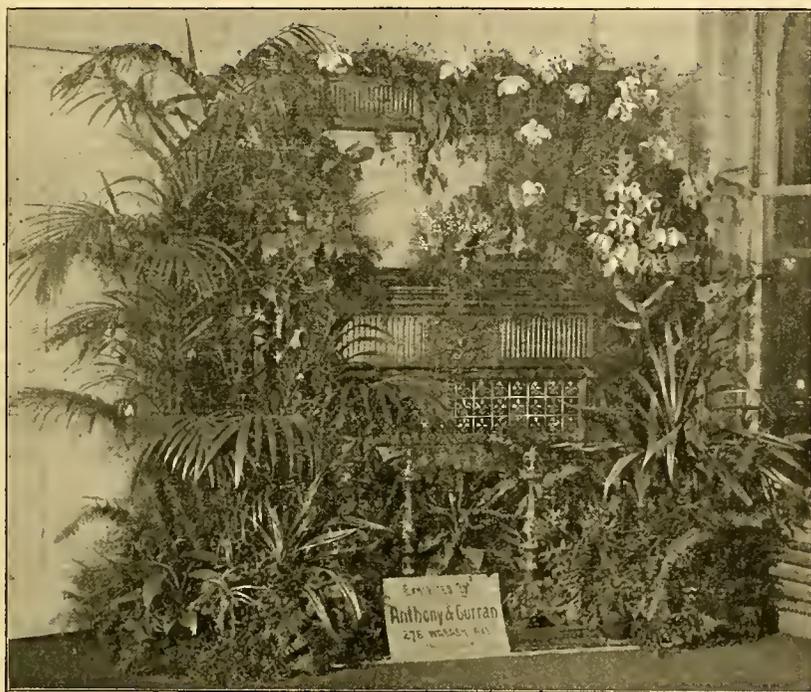

The bride carried a bouquet composed of 40 *Dendrobium formosum giganteum* and *Adiantum Farleyense*. From the stem of the bouquet fell graduated loops of ribbon ½ inch wide, tacked at intervals with delicate sprays of *Farleyense*.

This was considered one of the handsomest decorations ever seen in Washington, and was executed by Messrs. J. H. Small & Sons.

REYNOLDS.

The Florists' Art.

I like the idea of lady judges for florists' made-up work. As a rule they are the patrons of the florists' art, and as florists we should cater to their needs or demands, whichever way you are pleased to term it. Taking it all in all, the ladies generally know what they are talking about, and should you happen to offend their taste you will know, poor florist, what it is to be in a "wumpus," but don't make it a "wow," and don't get excited! Take things easy. Tear your work all

FIRST PRIZE ARRANGED BY ANTHONY & CURRAN.

SECOND PRIZE. ARRANGED BY WALTER KREITLING.
MANTEL DECORATIONS AT THE CHICAGO EXHIBITION.

to pieces, and set it up again, a la carte. "Now, isn't it just too lovely," they will say. And you must acquiesce, of course. Let them have their way—so long as they pay for it. But if you really know what's what—and it is your business to be informed—stick to it.

Often orders are given in a general way—you simply have an idea furnished and have to work out the details and technique yourself. It also may be against your better judgment, and you

politely suggest something different. But no, ladies *can* be imperious, and as long as they pay the fiddler you must expect to dance—yes, and know all the latest steps too.

See to it, my dear florist, that you are no back number, or the other fellow just over the way will nab your best trade. When you *please* a lady customer—when your individuality is original and tasty—and certainly the true florist ought to be an artist in his line—my lady expresses

herself in such dainty compliments: "Your work is always so exquisite," and "I told Mrs. B. just the other day"—you are feeling pleased all the way down to your boots—"I told Mrs. B. that you were so much cheaper than Mr. Steep." Then you understand you are expected to do the work at cost or a *little* below, so as to get her order next time. O, compensation! There's no such word these dull times. When woman, lovely woman, is so awfully fond of bargains, how can the poor florist expect to have enough surplus to attend conventions. "I do so love flowers, but you charge so much I cannot afford them. What is the price of American Beauties by the dozen?" Mind you, this at Christmas. "These are job lots, madame, a great bargain—only a dollar and a half apiece—worth two dollars, and cheap at half the price." Well, she does buy half a dozen carnations. Of course you knew she had no thought of Beauties. "Dat am de blessed truf I'm tellin' you dis minit."

Isn't it fun to attend to Christmas and Easter orders? A letter encloses a dollar. "Send me per first train a liberal quantity of your choicest cut flowers. I suppose you prepay express charges. I like Jacq. roses. Be sure and include a dozen pink roses. Some carnations. I have read of a new variety, 'Helen Keller'; put that in. I would also like a few sprays of lily of the valley, and a handsome bunch of violets. I dote on violets. And do not forget to line the box with maidenhair fern. I don't like smilax. Put my card in the box, and send them to Charlie—he's sick, and I'm so worried. Are 'pillows' very expensive now? P. S.—Mind, I'm very particular. I shall probably see them, and if you fill this order satisfactory, I will likely send you another—some day." You see I draw it mild. The half hasn't been told. I have to let the job out. Unfortunately my constitution is delicate.

For my part I do not see why the dear ladies should make such a fuss about supporting a weak-stemmed flower simply to hold it in position—to keep it up where it ought to be. Why, even *they* use stays and braces, whale bone and what not, to give themselves proper "style" or figure. I doubt much whether they really need it, and wouldn't they look still better to be more natural. "The best people grow less artificial and more simple in manner all the time."

Forbid, though, that I should indulge in ethics. The remarks of the lady judges at Chicago in regard to mantel decoration were apt and well timed. "The decorative effect should be more confined to the top than the bottom, where it is really in the way, or does not show for itself in a crowded room at parties and receptions. A simple, graceful effect is to be desired rather than mere quantity of material." And so on. It always seems so easy to overdo work of this kind, and when it is overcrowded the effect is stiff and unnatural. Good judgment also comes into play, originality and a true artistic sense of the ornate and beautiful. This is an axiom—a self evident truth that applies to the whole ground covered—let it be a dinner table decoration or a loose cluster of roses. When anything is out of harmony I can almost *feel* a sense of incongruity; doubtless it is so with the most of you.

I do not condemn the appropriate use of ribbon, or of gilt and silver—in suitable environment. Nor need maidenhair ferns be absolutely tabooed with chrysanthemums. A plaque or plateau of white or blush "mums" with adiantum bedded in

the moss is artistic and lovely, while crotons, *Grevillea robusta* (silk oak) and cyperus combine to better advantage with yellow and bronze colored "mums."

Any product of the florist's art, should be in itself a picture, an ideality, a study of harmonious color, and linger long as a pleasant memory, still fragrant with the scent of its sweet though faded roses. "The art of a thing is, first, its aim, and next, its manner of accomplishment." And let your heart be in evidence in all your work, for the heart giveth grace and finesse to every art.

GROVE P. RAWSON.

Improvements in Greenhouse Heating.

[Read before the New York Florists' Club, December 10, 1894, by Samuel Burns, member of the American Society of Heating and Ventilating Engineers.]

In Chambers' Encyclopedia we find under the heading of "Greenhouse" the following: "The first greenhouse of which there is any record was erected about 1619, by Solomon De Caus at Heidelberg, to shelter orange trees. The Chinese, however, are not unacquainted with greenhouses, and it is not known how long this has been the case. Heat was at first supplied when necessary by hot embers put in a hole in the floor, afterwards by furnaces in the greenhouse; flues, steam and hot water pipes are of more recent invention." Under the heading of "hothouse" the same authority says: "The oldest mode of heating hothouses is by furnaces and flues; the other modes practiced are by steam or hot water led through the house in tubes." The only information that I can gather regarding the heating of the greenhouse built by Solomon De Caus is that it was warmed by means of four large furnaces. How these furnaces were constructed or in what manner the heat was conveyed to different parts of the building is simply a matter of conjecture as history gives us no definite information on this point. However, as this greenhouse was used to shelter over four hundred orange trees planted in the ground it is reasonable to suppose that these furnaces were connected to a system of flues, taking into consideration the information we have at our disposal I do not think we shall be much out of the way if we assume that the first method generally adopted for heating greenhouses was the ordinary furnace and smoke flue. We certainly have good reasons on which to base such a conclusion, for while we find that the Romans understood the circulation of hot water to some extent, they knew more about heating by flues. The Hypocaust was a form of furnace much used by the Romans for the purpose of heating baths and apartments. The fuel was placed in a chamber under the floor and the smoke and heated air were made to circulate around the walls and under the floor by means of hollow tubes or a hollow lining. The full benefit of the fire was thus obtained, in place of a large portion of the heat being allowed to escape as it does in the case of the open fireplace. The Romans invariably used this form of furnace for heating their dwelling houses. We also find that the Chinese have for a long time used a very elaborate system of flues, and by which the floors of rooms are heated by a furnace constructed below with a moderate expenditure of fuel. We find this mode of heating described in Philosophical Transactions 1771, but the date of its introduction does not appear to be known.

There is not the slightest doubt that the smoke flue answered a very useful

purpose in the early days of horticulture and was at that time the most economical way in which the desired result could be obtained. This system of heating had many objections, such as unequal temperature in different parts of the house, as it was necessary to produce an excessive amount of heat at the furnace end in order to obtain any appreciable effect at the extreme end. This invariably produced a dryness in the air which had to be corrected to a certain degree by putting pans of water on the flue at various points. There was always great danger of the flue bursting at some point during heavy firing, which would allow the gases to escape and thus destroy many plants. The limited scope of the flue also necessitated a number of fires in large establishments, which was both inconvenient and costly. The origin of the invention of employing hot water for diffusing artificial heat appears to be hid in considerable obscurity. It is not improbable that like many other discoveries it has been reproduced at various periods. The same observations may be made regarding steam, for in searching through the various books of reference at my disposal I find that although hot water heating has been most generally used for greenhouse work the application of steam was fully understood long before we had a correct idea of hot water circulation. In a work written by Thos. Tredgold and published in 1824 I find the following: "Col. William Cook first suggested the idea of employing steam as a means of distributing heat in 1745. It has since been applied in various ways, most of which have repeatedly been secured by patents. The first of these was granted to John Hoyle of Halifax, England, in 1791, for a method of communicating heat to greenhouses, churches, etc. His plan consisted in conveying steam in pipes or tubes into or through the place to be warmed, the pipes being first raised to their highest elevation and then descending with a gentle declivity to a cistern for the condensed steam, the supply of water to the boiler to be regulated by a ball cock. This scarcely differs from Col. Cook's plan which had been known 46 years before, and what better can you do at the present time?" I find also in the same work the following in an article on forcing houses and stoves written by Mr. Neill; he says "Of recent improvements in this branch of gardening, however, the most important is the use of steam for communicating the artificial heat in place of depending as formerly on the passage of smoke and heated air through flues. Steam is employed on the largest scale by Messrs. Loddiges at Hackney, and I have nowhere seen stove plants in greater perfection and vigor. They have now (1824) used steam about five years and with success." It was somewhere about this time that hot water circulation began to be better understood, and the moment it was steam took a back seat for greenhouse purposes and remained so until about eight or ten years ago, when it came up again almost in the same form as that described by Tredgold.

Hot water heating seems to have been used in France in the year 1777 by M. Bonnemain, and was employed by him for hatching chickens by artificial heat. About the year 1817 the Marquis de Chabannes introduced a similar apparatus into England for heating a conservatory and also heating some rooms in a private house by pipes leading from the kitchen boiler. In 1822 Mr. Bacon, a gentleman of fortune, introduced the use

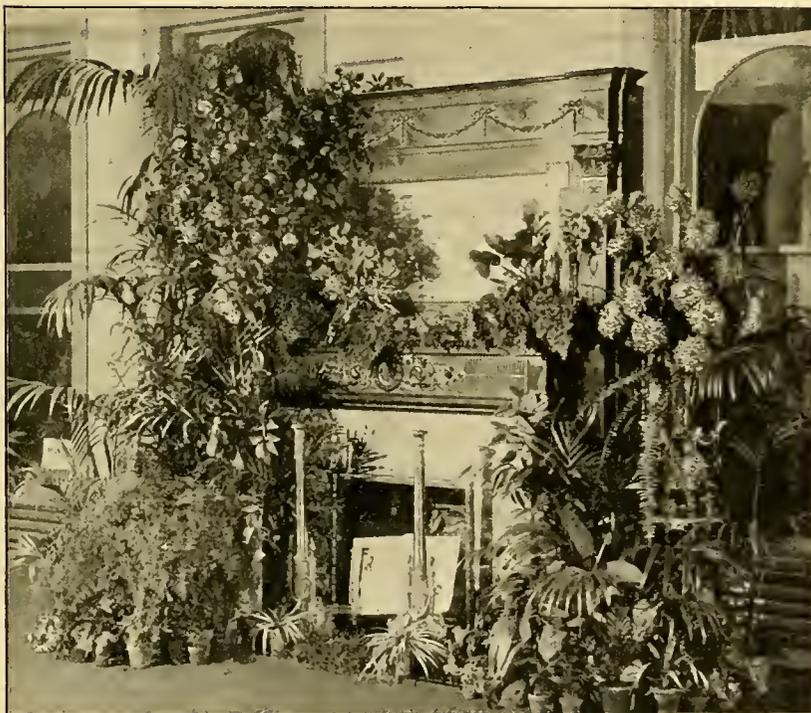

of hot water into his forcing houses, using for the purpose a single pipe of large diameter, communicating with the boiler; and by giving a slight elevation to the pipes from the horizontal line he was thus enabled to produce a circulation of the water, the hot water passing slowly along the upper part of the pipe and the colder water returning to the boiler, along the lower part of the same pipe. The circulation in this apparatus was very imperfect and Mr. Atkinson, an architect, almost immediately afterwards suggested the addition of a second pipe to bring back the colder water to the boiler and thus at once the apparatus assumed the form which it has ever since retained. By this alteration the apparatus was brought very nearly to the same form as that contrived by M. Bonnemain more than forty years before; the principal difference being that M. Bonnemain used only very small pipes of gun barrel size, while Mr. Atkinson used pipes of four or five inches in diameter.

The boilers used in the early stages of hot water heating were very simple in construction, in fact nothing more than an open vessel somewhat similar to a common wash boiler. I saw one of these in 1874 at Mr. Durfee's greenhouse in Fall River, Mass. This apparatus consisted of an open copper boiler having a flow pipe leading out near the top and a return pipe entering the bottom; the pipes were 4 inches in diameter, also made of copper and carried around the greenhouse to an expansion tank. Of course with this form of boiler the pipes would necessarily have to be carried on a dead level, otherwise the water would overflow. This being the case and finding that the pipes must in many cases be carried on different levels would naturally suggest to the inventive genius of the age the close topped boiler such as is used at the present time. The improvements that we enjoy both in steam and hot water for heating greenhouses can not be said to be in methods, but rather to be a better knowledge of the laws which govern their application. There is no art, however humble, in which a knowledge of the laws that regulate matter does not open a wide and extensive field of useful improvement. It is only by a careful study of the principles which govern natural phenomena that we are enabled to profit by their practical application. Such has been the case with the heating of greenhouses. The day of the brick or tile flue with its dry heat, constant leakage of gas and other disagreeable features is past. No progressive florist would at the present time think for a moment of heating a new greenhouse by this method, and while in many cases he allows the flues to remain in his old houses it is generally because the times do not warrant him in spending the money necessary for a change.

The methods employed for heating our modern greenhouses at the present time are the same as have been previously described, namely, hot water and steam. We have, however, many different ways of applying them to our uses. We have the gravity system, the low pressure system, the high pressure system, the overhead system, the combination overhead and under bench system, the uphill system, the downhill system; and, as if this was not enough, there are some manufacturers of boilers who claim to have a special system of their own. All these various systems are described by Chas. Hood in a work entitled "A Practical Treatise on Warming Buildings," published in 1836. After very careful con-

MANTEL DECORATIONS AT THE CHICAGO EXHIBITION.

sideration I have arrived at the conclusion that most of these so-called new ideas are old ones warmed over.

I will now give you a brief description of the various systems of heating greenhouses, confining myself to those previously mentioned. First is the gravity

system, which in hot water refers to all cases where an open tank is used and the tank not elevated any more than sufficient to fill the pipe with water. In steam the gravity system refers to all cases where the water returns to the boiler by its own specific gravity without the aid

of a steam trap. The low pressure system in hot water refers to any case where a tank is attached to the apparatus at a reasonable elevation above the heating pipes; the tank may be closed in this system but must be supplied with a low pressure safety valve. In steam this would be the same as the gravity system. The high pressure system is not much used either in steam or water heating owing to its dangerous qualities. In hot water this system calls for a small coil of pipe built in a furnace, the pipes being continued from the upper part of the coil and then around the room to be heated, forming a continuous pipe when again joined to the bottom of the coil, a large pipe being placed at the highest point in the apparatus for expansion. This pipe should have an opening near its lower extremity by which the apparatus is filled with water, the aperture being then closed by a screw or valve; the apparatus thus becomes hermetically sealed. The expansion pipe thus left empty is calculated to hold about one-twelfth as much water as the whole of the small pipes, this being necessary to allow for the expansion that takes place in the volume of water when heated. The overhead system refers to those cases in water or steam where the heating pipes are overhead and can be either high or low pressure as desired. The combination system can be either water or steam and refers to those cases where the flow pipes are carried overhead and the returns carried under the benches and thus back to boiler. The uphill system refers to water and applies to those cases where the water flows up gradually to the end of the greenhouse, which is the highest point, and then returns to boiler. The down hill plan is the reverse of this, the hot water rising at once to the highest point and then dropping back through the greenhouses to the boiler. The gravity system is an old standby and has done good service for us in the past and is still doing good for us to-day. The low pressure system, both steam and hot water, are good according to conditions. The overhead system is undoubtedly good to keep the snow off the roof but is very unkind to the plants on lower benches. The combination overhead and under bench system, either in steam or water, has in my opinion thus far proved itself to be the most effective. Florists generally are at the present time taking greater interest in the subject of heating than they did some years ago, and as a result of this are better informed on this vital point. The more they study this question and consider it a part of their own business the better will they be enabled to select the best the market affords in the way of heating apparatus.

* * * * *

Whether we use hot water or steam we are to-day better able to determine what will be the result of a certain combination of boiler and piping as applied to greenhouse work. We find also that with the advent of two-inch pipe many florists have been able to do their own piping during the slack part of the season. This will naturally be a saving to them of many dollars in first cost, but while I must commend any business man for trying to reasonably reduce his expenses, and while I feel that it is wise for a florist to fully understand how to put in a system of heating I would say: Don't attempt the job unless you fully understand what you are going to do. I can safely say from my experience of over twenty-six years that a large majority of the failures in greenhouse heating are

due to imperfect systems of piping. Remember at all times, whether you are putting in hot water or steam, that there is no such phrase as "good enough" in the business; you must proceed carefully at all times with the pipe tongs in one hand, the spirit level in the other. Of course an indifferent job of piping may work; were such not the case I am afraid quite a number of our florists and private gardeners would have to call in the services of an expert. Where the piping is not put in properly the circulation of the water or steam, if it circulates at all, will be sluggish, thus necessitating a greater force at the boiler, which means a greater expenditure of fuel than would be required under proper conditions. In all cases where a florist finds it necessary or advantageous to do his own piping I should advise him to consult with the parties from whom he purchased the boiler, telling them plainly what he proposes doing, and ask them to furnish a plan of the work. This they will no doubt cheerfully do, for it is to their interest to have the work done well.

With our modern boilers and systems of piping the florist can regulate the temperature of various houses to suit the conditions required by different kinds of plants. The improvements in this direction are shown by the magnificent specimens exhibited at our flower shows. The use of two-inch pipes in conjunction with a proper arrangement of valves gives us an opportunity for sub-dividing the heat such as was not possible with pipes of larger size.

What I call the combination overhead and under bench system has five good points to recommend it; this is where the flow pipes go overhead, and the returns under benches as previously described. First: It can be adapted to the pressure system by placing a safety valve on the expansion tank, or it can be used with an open tank having no pressure but what is due to the column of water. Second: The heat is carried to the extreme end of the greenhouse in the shortest possible time, and returning under the benches on either side, beats back to the boiler from the extreme end, which can be kept at the same temperature as the end nearest the boiler. Third: It can be used on the uphill or down-hill plan, to suit the grade of the greenhouse; this is very convenient when the house grades the wrong way. Fourth: An increase in the vertical height of the flow pipes is always followed by increased velocity, therefore we get a quick circulation. Fifth: Last, but not the least, should your greenhouse be situated in a place where you would strike water by digging down from six to eight feet, or should you strike rock, this is the system that will help you out of your difficulty. I have carried out some work on this system where the base of boiler was on a level with the heating pipes, and the water had to rise up to the return about twenty inches. We have a little boiler heating our office on this plan where the main return pipe travels about fifty feet along the floor, and about eighteen inches below return pipe entering boiler; after traveling fifty feet this return pipe drops under the floor about ten inches, travels between two beams for about seventeen feet, then rises up into boiler; in both these cases the circulation is perfect. In greenhouse work I prefer to have a boiler pit at least eighteen inches deep, so as to bring the return water back on a level. I have great faith in this system, for where I have used it the circulation has been very rapid, and the results more than I expected.

Carnation Notes.

The different opinions concerning rust and its causes, the different formulas used for the prevention and cure of the disease, are somewhat bewildering and amusing. The remedy which has kept rust from one grower's stock is of no value to another and the dose which has killed it (the rust) on another's plants that were badly infested, has killed the foliage on his neighbor's. We learn that one man has used six pounds of carbonate of copper to fifty gallons water. Now this is sixteen times as strong as used by a party who told me that he had no trouble in killing the rust as dead as a hammer with only six ounces to fifty gallons of water. Still another grower commenced with the latter dose and gradually increased it in strength until the last application was six times as strong as the first solution, and still the rust continues to show and to spread in spite of all the spraying and attention that has been given the plants, and this seems all the more curious as some plants received from the same grower as the last case mentioned are now growing not three miles away without the least sign of rust. Why is it? Is it a condition of the atmosphere in the house? Is it the watering overhead or underneath? Keeping the foliage moist or dry at all times? Why is it that stock purchased from a grower who has never had a particle of rust will at once show up that powdery substance that has caused so much worry and so much loss of stock, simply because some growers were scared into throwing out whole benches of fine plants. I'm one of these. Some say grow only the varieties of carnations that are "rust proof," but you see we must have flowers of some kind, and while one or two new sorts have not developed rust, yet it must come to them as to all the rest.

A case which may have some bearing on this matter came to my notice lately. A member on the staff of the New York Experimental Station informed me that in Iowa where he came from the wheat is troubled greatly with a fungoid growth called rust. The farmers were advised to grow sorts that were not subject to this disease, so they sent to Texas and procured a variety which had never shown any disease whatever. Great were the hopes and expectations of the farmers. Great was their sorrow when the next season brought with it to the rust proof wheat the same old rust as they had been troubled with. This same gentleman informs me that all measures so far taken to prevent this fungoid growth have proven useless, that some seasons no rust appears, but the next year it may appear stronger than ever, and the directors of the stations in the far west have come to the conclusion that it is a condition of the atmosphere which produces rust, and that there is no remedy, and I begin to think that Bordeaux or any other remedy is of very little use on carnations, for stocks that last winter at this time were literally covered with rust lost every trace of it before the following May. I purchased five hundred plants last March and threw them out a few at a time until they were all gone; they were rusty. The

party who sold me these plants gave me one hundred in July which were taken from the same stock but which had outgrown the rust. There has never been any rust on these plants nor any sign of it.

Now, after all the fuss and noise that has been made of this subject and even the advice received from eminent growers telling us to throw out, and upon what are left to spray a dozen different solutions, I have come to the conclusion that I will for the sake of experiment stop right here. Perhaps if my place was loaded, as they term it, I would keep right on, but as I have only found five plants this fall that had any rust I think I am safe in taking a few chances. If after a few months withholding fungicides the rust appears in any quantity I will tell you.

CHARLES H. ALLEN.

Bursting of the Calyx.

Will some one kindly inform me as to the cause of Lizzie McGowan carnations bursting their calyx? I have 10,000 plants in, and so far they have done well, but the flowers are now beginning to burst the calyx. I give them a night temperature of 50°, and 60° to 70° days, water well and have them on solid benches in soil part heavy, part sandy loam and cow manure.

INQUIRER.

Answer: Run the houses 55° at night and use nitrate of soda, one pint to fifty gallons of water as a stimulant, once every two weeks, alternating with a solution of fresh cow manure, one pail full to fifty gallons water. I believe McGowan grows better in a light soil. If your soil is naturally heavy I would advise making it light with such vegetable matter as corn stalks or straw cut into short lengths and mixed in compost heap in the spring; better to do it now if possible. If you will try benches four inches deep in comparison with solid beds I think you will discontinue using the latter. The result of the change in temperature advised will not be perceptible for two weeks.

CHARLES H. ALLEN.

Cyclamen Persicum.

A request comes from "F. H." to the editor asking some grower to write up "How to grow cyclamen from beginning to end, giving details of the management from seed pan to flowering." I shall endeavor to give "F. H." my method of growing these most beautiful plants, and can say that when faithfully followed out I have always been successful, but when any neglect was allowed to creep in a corresponding failure occurred. In growing cyclamens, as in the culture of most of our crops it is not the science you possess so much as the constant application of the knowledge you have; the constant and never ceasing watchfulness is the attribute which makes good gardeners. And this will apply most particularly to the cultivation of cyclamens, for they must never be neglected at any period of their growth.

The seed should be fresh and of a good strain. Sow anywhere from September to end of January, the earlier they are sown, the larger you can have the plants for the following winter, but if grown on without a check you can grow fine plants in twelve months. Sow in a well drained pot or shallow box in sandy soil. Make the surface of the soil perfectly even, press in the seeds and cover only enough to

ARRANGED BY P J HAUSWIRTH

ARRANGED BY H. F. HALLE.
MANTEL DECORATIONS AT THE CHICAGO EXHIBITION.

just cover the seeds. Keep the soil moist but not too wet. When the little plants have made the second leaf and the bulbs are the size of very small peas transplant single into 2-inch pots or prick out in flats. I prefer to transplant into flats about 2 inches apart; when the plants begin to crowd lift carefully and pot into 3-inch pots. I might say here that from the time the first leaf is formed they should have plenty of light and all the air they can, consistent with temperature, and only need shade during our hottest months. Before they need a shift from the 3-inch pots it will be the month of May or June, and now comes the most critical time of their growth. Some growers (and I believe it is the practice with the Germans) make mild hotbeds and plunge them in, raising the shaded sash back and front. There is no doubt a larger plant can be grown this way, but not such a compact and useful one, and they run a much greater chance of being neglected in a frame than on a bench in your houses. A moderately shaded house with plenty of ventilation will do them all right for the midsummer months. In May or June they should go into a 4 or 5-inch pot, and in September they should get their last shift, a 5 or 6, or 7-inch as the plant needs, but don't scrimp them for pot room, as they grow and flower a long time.

When October comes they are easily managed. A light airy house where the night temperature is 50° to 55° is the proper place for them. The soil that suits them is a good yellow loam with a third of genuine leaf mould. If you don't have the latter then a substitute can be found in thoroughly rotten manure, but no trace of fresh manure must be used. In a barrow load of the soil I have used one-half a peck of old lime rubbish (mortar) which they like, and for drainage there is nothing so good as charcoal. They should have perfect drainage at all times; pot rather firmly. On all bright days they should receive a light syringing. In regard to water they should never be allowed to wilt for want of it, which they quickly will do, and if well drained you are not likely, with any exercise of judgement, to over water them.

They are much troubled with three well-known enemies, greenfly, thrips and red spider. There must be a regular systematic fumigating at all times; never less than once a week which will keep down the fly and thrips, and a frequent syringing will keep off the spider. For these reasons they are better handled in a house than a frame. I have never used any liquid manure to them, except soot from soft coal, one-half a pint of that in three gallons of water will help to produce a deep green in their leaves as well as intensity of color to the flower. Never crowd the plants at anytime, always giving light and air. Never stunt them for want of root room, never let them get infested with greenfly, etc., and you will assuredly grow cyclamens. *Cyclamen persicum giganteum* is the variety now generally grown, but there is a strain I grew a few years ago under the name of *C. P. grandiflorum* which I much prefer.

WM. SCOTT.

MR. JOHN WHITE of Elizabeth, N. J., has raised a gem in the form of a variegated foliaged canna. The leaves are elegantly variegated white and green, and edged with pink. It has not yet flowered.

Please mention the AMERICAN FLORIST every time you write to an advertiser

Hard Wooded Cuttings.

Now is a good time for putting in cuttings of such plants as boronias, ericas, acacias, azaleas and others of such like nature. All those, then, that keep the above class of plants in stock, and find time lying heavily on their hands after getting everything in order for the winter, would do well to employ their spare time in getting in a batch of cuttings of the class mentioned.

Though root action in the established plant, as well as in the cutting, is less active perhaps in this month than in any other month of the year, yet it is nevertheless on that account more favorable to cuttings of this class, since they take so long to root. They will, if put in this month, be going through the process of callousing at the cut end, and since the sun is less strong now and nature consequently less excitable the drain on their vital forces will be less exacting; they will therefore naturally improve their time in more or less establishing themselves in the cutting quarters, and be better prepared to respond successfully with the emission of roots when the excitable season comes around. To further assist in preventing exhaustion of their vitality during their long inactivity, a bell glass, or a similar contrivance should be placed over them. This glass should be frequently wiped dry from the moisture that collects on the inside of it. Whether inserted in pots, pans or benches ready escape of superfluous moisture by plentiful drainage must be secured, and in consequence of the ample drainage necessary for this end eternal vigilance must be exercised on the other hand that the moisture be not allowed to get under a certain point.

The best material for inserting such cuttings in is upland peat, sifted fine, and silver sand in equal parts. If the above ingredients, however, are not easily procurable any good sharp clean sand will give tolerable assurance of success, providing other necessary details are strictly attended to. The sand used must be, however, much finer than that used for ordinary soft-wooded cuttings. River sand of a clean sharp nature is preferable to bank sand, unless the latter be very clean and fine, and exposed to the elements for some length of time. Sand used directly from a bank for propagating purposes has a tendency to remain for a considerable time cold and sodden, a condition always detrimental to success. Sand that has been exposed for some time to the weather becomes more adsorptive of the solar heat, which is so essential to the promotion of vegetable growth. This holds good likewise for potting sand, and therefore it would be an excellent plan to have at least a six months' supply on hand at all times.

Sphagnum moss, the green tips of same chopped very fine and sand mixed together in about equal parts, I have found to be the best all around propagating material, and strictly so with medium and hard-wooded cuttings. Crotons and many others of like nature will root in such material in one-half the time that they would have taken in sand. The theory of the advantage in favor of the latter material for propagation is, in the first place, that water has an easy egress on account of the porosity secured by the particles of moss; secondly, that those particles will absorb considerable water, giving it off as circumstances demand; thirdly, that the need of the watering pot is less frequent—a material gain, I consider; and lastly, it will absorb artificial

heat to a higher degree, and retain it longer, than sand will.

Cuttings of the class of plants above referred to, if put in now, should not of course be introduced to bottom heat or any high temperature; a temperature of 55° to 60°, as the highest range for the next six weeks, being sufficient; after that period of time elapses they can be put in a place where they can get a gentle bottom heat. Cuttings of this class so treated will yield a higher percentage of live plants at the end of the year than if put in as late as February and March.

The tips of the shoots made the present season should be taken in the case of boronias, also acacias, the small sturdy side shoots of ericas and the vigorous and unruly shoots of azaleas. It is necessary to cut those unruly shoots in azaleas well back to ensure uniformity of growth, and the tips of same will root readily and make nice little plants in a few years. Considerable critical observation of the mode of flowering, etc. will enable the operator to take the proper cuttings and from the proper place without materially altering the appearance of the plant.

K. F.

CHAS. H. ALLEN.

President-elect of the New York Florists' Club.

New York.

There has been a noticeable shortening up in receipts of cut flowers, more particularly roses, which notwithstanding the somewhat spiritless complexion of the retail market has sufficed to advance prices of small lots and to suspend for the present any special quotations on large quantities. The shortage is due in part to the condition of the weather, which has been steadily unfavorable to flower production in either quantity or quality. For very fine American Beauties the price ranges from 60 to 75 cents each, but they must be very fine to reach these figures. A good many poor roses are seen, all varieties contributing more or less to this grade, but Mermets especially noticeable. Those received from some growers look as if parboiled and are of no earthly use to anyone. Cypripediums are very plenty, the daily receipts sometimes running up into the thousands. Violets vary greatly in quality, even from the same grower. The demand for them is irregular and stocks are frequently carried over from one day till another, when owing to lack of fragrance they bring but small returns. Harrisii lilies and lily of the valley are in full supply. Mignonette is in demand and the small quantity of extra quality being received sells at sight.

Changes among the growers, from one commission dealer to another are now of daily occurrence. Whether the greediness of certain growers or the hot rivalry existing between some of the commission men is most responsible for the existing conditions would be difficult to decide, but it must be apparent to anyone giving the matter unselfish consideration that

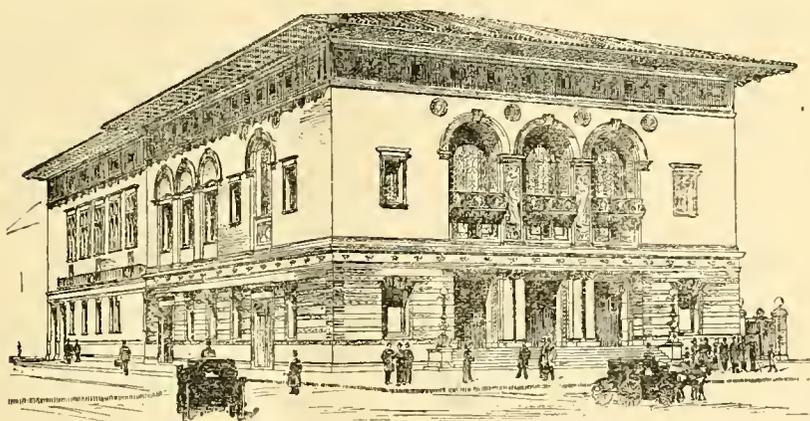

such a state of affairs is most unfortunate for the flower trade in the long run. The product of large establishments is often taken from a dealer without any notification whatever. The reply of these growers to any criticism of this practice is that any goods consigned to a dealer after advance notice of a change had been given him would be purposely sacrificed. Yet it is not an easy matter for a grower whose stock has been carried through the dull season by a commission house and who two weeks before Christmas without warning transfers his product to another agent to explain or justify his action on any grounds consistent with the sense of justice and honor in fair minded men. For the credit of the profession it is well that there are some growers, and they stand in the first rank as growers too, who are able after their years of experience to select an agent in whom they are willing to place their confidence for at least a twelve month and whose conscience demands some better motive for making a change than the bait offered by a rival house when holiday time approaches.

The meeting of the Florists' Club on the evening of December 10 was one of the largest for many a month; the election of officers and the promised essay by Mr. Samuel Burns on the "Improvements in Greenhouse Heating" serving to draw together a very large and representative gathering. There was no contest on any of the offices with the exception of that of secretary, on which lines were sharply drawn and preferences pretty evenly divided, Mr. Young being re-elected by a small majority. Chas. H. Allen was elected president, C. G. Weeber vice-president, and C. B. Weathered was given another term as treasurer. For trustees James Dean, A. T. De la Mare, Theo. Roehrs, J. N. May, J. H. Taylor and S. C. Nash were unanimously chosen.

The dinner committee reported that Saturday, January 19, had been selected for the great occasion, which it was stated would be the most elaborate affair ever consummated in New York, the price of tickets being fixed at five dollars. The old committee on transportation to Atlantic City was amid much merriment resurrected long enough to report finally that everybody had got home all safe from that important event. A resolution by Mr. Kelsey calling attention to the inequalities in rulings on imported nursery stock and urging the necessity of a correct and uniform interpretation of the tariff rules now in force was adopted by a unanimous vote and Messrs. Kelsey, Asmus, Jr., and De la Mare were appointed a committee to present the case before the customs authorities. After an amendment to the by-laws providing for a salary for the secretary and the treasurer, at 9:30 p. m. the essay was reached and Mr. Samuel Burns proceeded to read the interesting paper, which we present on another page of this issue, and which was vigorously applauded.

On the centre table were vases of Mr. J. N. May's two new introductions, the carnation Dean Hole, and the rose Mrs. J. Pierpont Morgan, and a number of dwarfed palms recently received by W. A. Manda from Japan, supposed to be *Chamaerops Fortunei*. Another interesting object was a directory of the city of New York for the year 1786, which Mr. Morris exhibited, remarking that there was not a single florist mentioned in it.

The New York Florists' Bowling Club reorganized on Monday afternoon, December 10, under most favorable auspices

THE PROPOSED NEW HORTICULTURAL HALL OF THE PENNSYLVANIA HORTICULTURAL SOCIETY, PHILADELPHIA.

and with a membership of sixteen to start with. Alex Burns was elected president, Lawrence Hafner secretary and treasurer and E. Leuly captain, and a set of rules for the regulation of the club adopted after a due amount of good natured, eloquence. Meetings for practice will be held on every Monday afternoon from 3 to 7 o'clock.

Mr. James Purdy, wholesale florist, late of West 43d street has succeeded to the business of F. D. Hunter at 57 West 30th street, Mr. Hunter having given up the business to accept a position as flower buyer for several large out of town establishments. Mr. Purdy's wife died a few weeks ago after a long illness and his business was badly disarranged in consequence. He has the sympathy of a large circle of friends and well wishers.

A particularly sad event of the past week was the death of the wife and infant child of Henry W. Siebrecht, Jr., which took place very suddenly at their home in New Rochelle on the 8th inst. Mrs. Siebrecht was a most lovable young lady and much sorrow is expressed at her death.

D. H. Roberts of American glass fame will move in a few weeks to 130-132 South Fifth avenue, where he will occupy the whole of a five story building with floor's 50x175 feet each. Thos. W. Weathereds Sons will also move shortly to a new office in Cornell Building, Center street.

It is also announced that John A. Scollay of Brooklyn will open an office in New York on the corner of Center and Leonard streets.

Mr. Samuel Henshaw contemplates a trip to California in company with his wife, starting January 15.

Mr. A. Dimmock will sail again for England on December 29.

Philadelphia's New Hort. Hall.

We present herewith a reduced reproduction of the architect's drawing of the proposed new hall of the Pennsylvania Horticultural Society. The interior decorations will be in keeping with the exterior. The following is extracted from the architect's description:

"On the first floor the front part of the building is devoted to the library of the Horticultural Society and to the secretary's offices. The central part of the building is occupied by the hall of the grand stairway, behind which are spacious waiting rooms, cloak rooms and lavatories, on the north for ladies, and on the south for gentlemen. The accommo-

dations thus provided are ample for one thousand persons. The waiting rooms are also suitable for use for floral exhibitions or for small entertainments.

"Ascending the grand stairway one enters the large hall, 70 by 100 feet, with a vaulted ceiling at a height of 35 feet. This room will seat 1,100 persons for concerts and lectures and over 500 for banquets. It is lighted from each side by a series of five large windows; at its west end is a platform, below which, and upon a level higher than that of the first floor, are six small rooms.

"In the front part of the second floor is a suite of rooms consisting of a small hall and two supper rooms. In this suite supper will be served when entertainments are in progress in the large hall, and for this purpose serving rooms are provided extending entirely across the front of the building.

"The kitchens will be on the third floor, immediately over the supper rooms, and the basement will contain the rooms of the Florists' Club, the apparatus for heating, ventilating and lighting, and ample storage rooms for all purposes."

Philadelphia.

W. K. Harris cut the last of his "mums" December 10, with the exception of the beautiful variety Mrs. Thos. Cartledge, which seems to be the latest of the late. The stock of this kind has been sold to Pennock Bros. Mr. Harris says his late varieties, Eva Hoyt and After the Ball, paid him better than any of the early ones, although it was not on account of their excellence, but more from the fact that he had the market to himself. Another grower is well satisfied with his crop and the prices obtained, as he sold \$600 worth this season from the same space that yielded but \$400 in 1893.

The extra demand for all kinds of cut flowers generated Thanksgiving week still continues, and good stock sells readily at advancing prices. On December 10 all roses were advanced, Beauties moved up to \$5 per dozen for the best, and anything worthy the name brings \$3. All the larger teas are selling for \$8 per hundred, while the smaller stock, such as Perles, Cusins, Gontiers and Watevilles, bring \$4. Double violets are a shade more plentiful at from \$1.50 to \$2 per hundred. Speaking of this flower, a Philadelphia gentleman happening in New York a day or two ago stepped into a Broadway store and had a boutonniere of their purple beauties arranged on the

lapel of his coat. "How much is it?" "One dollar, please." "One dollar! why, I never paid any such price as that for a boutonniere." "You must be a Philadelphian," replied the attendant as he gave his customer the change.

Carnations have moved up a notch, and \$2 and \$3 is now asked for the best; they are a trifle more plentiful than last week, and the quality is still improving. Valley and hyacinths sell readily for \$4 per hundred.

The market scheme is progressing, another meeting having been held. The following gentlemen have been proposed for officers: President, Wm. Hageman; secretary and manager, Geo. C. Watson; board of directors—Robert Craig, John Burton, Wm. Hageman, Geo. Anderson, Geo. C. Watson, W. K. Harris, John Westcott, Edwin Lonsdale and Joseph Heacock. The time for secrecy being past, an interview a column long appeared in the *Public Ledger* under the caption "A Poetic Combine"; this was the result of an interview with Mr. G. C. Watson, who has been active in perfecting the movement, and while it contains nothing new, it is a very full and explicit account of the plans of the organization. The Heacock movement to sound the trade on the possibility of a plain growers and dealers' market, and for which purpose a meeting was called last Tuesday afternoon at Horticultural Hall was a great success. It demonstrated beyond all doubt that the trade are entirely satisfied with the present methods of handling cut flowers, and desire no change. The great advantages of a cut flower market over the present method to everyone in the business have been frequently acknowledged by the leading growers and dealers, but it being so easy to move along in the old beaten path that any new way is viewed with mistrust, and the smallest obstacles become great stumbling blocks. Adieu, market, adieu!

There was a good attendance at the meeting of the club last Tuesday evening. C. I. Kent and Theodore Miller were elected to membership. The paper read by Mr. John Curwen, Jr., showed careful preparation and was very well received. The thanks of the club were tendered him for his excellent essay, which was ordered to be sent to the horticultural press. A discussion on lawns brought Mr. H. Michell to the front with the following formula for perfect lawn grass seed: Fancy blue 30%, red top 15%, wood meadow 10%, perennial rye 10%, white clover 20%, Festuca ovina 5%, Rhode Island bent 5%, sweet vernal 5%.

It was also stated by Mr. Craig that the next meeting of the Horticultural Society would be held Tuesday evening, Dec. 17, at Century Drawing Room, 12th street below Chestnut. A paper would be read by Mr. Lonsdale on plants for home adornment, illustrated with specimens of well kept house plants of several years' acclimatization. Mr. R. Craig will also give a talk on the same subject, illustrated by a number of specimens from his greenhouses. Members of the club were asked to send anything beautiful or curious, or that would be of interest to visitors. This is a move in the right direction, with a meeting as interesting as this promises to be held every month the membership of the society will surely grow and the interest in its work increase in the most gratifying manner. Mr. May has promised to send specimens of his new roses and carnations to this meeting, and any other novelties sent will be received and staged by the committee, and their merits passed upon. K.

Boston.

Mr. Geo. McWilliam exhibited at Horticultural Hall on Saturday, December 8, two hybrid cypripediums in bloom for the first time. One was a cross between *C. Spicerianum* and *C. venustum* and showed in a marked degree the characteristics of both parents. The other, a cross between *C. Spicerianum* and *C. niveum*, was a perfect little gem and must certainly be called one of the loveliest cypripediums in existence. A silver medal was awarded for the latter. Mr. McWilliam also showed some well bloomed plants of *Luculia gratissima* in 4-inch pots which attracted much admiration. As a Christmas blooming plant nothing prettier or more appropriate could be imagined than a pot of these deliciously scented pink blossoms. Among the other exhibits were some seedling carnations from Sewall Fisher. Two of these were white varieties of much promise, one of them being a true smooth edged flower and very handsome.

Boston has been pretty well buried in snow for the past two weeks and the delights of sleighing may be supposed to have in some degree interfered with the demand for cut flowers. The cold weather has served to keep the peddlers off the street, however, and whatever trade has been going has gone through the hands of the legitimate dealers. There is no overstock of anything to speak of and no prospect of any until after the holidays. Prices have been firm on all grades since Thanksgiving, with a tendency to advance where stock is of extra quality.

There is no prospect of a specially large supply of anything in the cut flower line for Christmas. There may be an exception to this in the case of *Harrisii* lilies, which seem to be considerably more forward than ever before at this season. The demand for holly has been increasing every year and indications are that this year's sales will far exceed any of its predecessors.

Visiting Boston: Winfried Rolker of Aug. Rolker & Sons and Geo. Sykes, representing Hitchings & Co., of New York; Charles H. Allen of Floral Park; Eugene Dailedouze of Flatbush, and S. Skidelski, representing M. Rice & Co., Phila.

Dean Hole has been here to deliver a lecture, but owing to the exacting requirements of his business manager no opportunity was given the rose men and florists to extend the hearty welcome which they had contemplated, much to their disappointment. It is hoped, however, that at a later date their desire may be gratified.

Buffalo.

There is little to say about business in our town, for since Thanksgiving it has been very quiet. A few small parties, but none to affect the general trade. Flowers are not over plentiful, or at least those grown in the vicinity.

Wise Bros. of East Aurora are sending in very fine carnations as usual, which are always quickly picked up. These Wise men have the faculty of growing extra fine flowers even of the older kinds. Their *Portia* and *Tidal Wave* are a distinct article from the average of those grown.

Harmon & Burr of Darien are again the violet men of Western New York. They are picking large quantities and the flowers are A1 in every respect. Last year's violet king, Mr. Ruhlman of Lockport, is not sending in the immense quantities that he was last year, although he has added several houses to violets. His

plants look well and a little later he will come with a rush.

One of our east side florists, Mr. C. Barth, has given up the business for reasons of which the writer is ignorant. Speaking of the east side but a very few years ago a flower store in that part of the city was not dreamt of. Now there are several, showing not only the great growth of the city, but also the growth of the business. Besides a dozen greenhouse establishments, all doing a retail business, there are several stores doing a good business in their own locality. There is Max Gluko on Broadway, S. Pickleman and James Milley on William street, Joseph Staffinger on Seneca street, and away down in the south end of the city is the neat store of Mrs. Buddenberg.

All hands and the cook are now busy with greens and holly, which promises to be as big a factor in the business as ever. The holly that has arrived is not of a startling quality, but there are other places to hear from. The ground pine is very fresh and green.

The writer made a very short visit to South Park last week, where the botanical director, Prof. Cowell, is making good progress with his range of propagating houses. In these hard times it was impossible to get but a small appropriation for the erection of glass this fall, but under the strictest supervision of that little the very most will be made of the money. Would that Buffalo had a Phipps or Carnegie. The South Park or that part which will be known as the Botanic Garden is admirably suited for the purpose. There is almost every quality of soil and great diversity of elevation. There will be I should say a suitable place found for every plant or tree that is hardy in these parts; standing near the site of the greenhouses on the ridge road and looking north and west there is a grand view of the city, Lake Erie and the Canadian shores. The city is fortunate in having such a gifted and enthusiastic man as Mr. Cowell in charge of that department of her public parks.

Bowling seems dead among the florists here, although very much alive in the city at large. We don't have to practice you know, but we would like to have just a go at those Rochester florists. I believe we could beat them even with Peter Crowe thrown in on their side. W. S.

Chicago.

The Christmas holidays are close at hand. Only one more week remains for the grower to bring forth that promised crop of roses and carnations. To judge by present appearances of the various establishments we have visited lately the outlook is not all promising for a heavy supply. The average stand of the rose houses is probably as good as that of last year, but very few benches give promise of a full crop for Christmas week. The greatest bulk will strike the market a week or two late. Much of course depends on the weather, which at this season of the year is apt to be far from reliable. There is another powerful factor which cannot fail to shorten the holiday supply, and that is the continued scarcity of stock and consequent high prices at present. This should not affect the supply of roses, which no grower of these enlightened days is supposed to put in pickle. It is different however with carnations, violets, mignonette, etc., which could be kept back with perfect safety. So far as is apparent now not a single carnation fit to pick is being held back; the same is true of violets. The former like the roses

are looking on the average quite promising for the season, but no extra large supply can be depended on for Christmas. Violets on the other hand show up better, the average quality of blooms is better than last year and unless the present signs fail the supply should be ample. Romans are not grown around Chicago to any large extent this season, at least but comparatively few batches are being forced so far. *Narcissus* (paper white) too are not nearly as plentiful as was the case in former years, the few sent in are good and sell readily.

On the whole it would seem that unless the attraction of the present stiff prices should draw a unusually large supply from outside points, stock will be scarce and consequently high. The steady pressure of the shipping demand further points to the fact the country growers and dealers are short. Many of these orders have to be scaled down for lack of a sufficient supply.

In local circles trade has been quite active. The charity halls of both the Knights Templar and the Hebrew society called for a large supply of all kinds of flowers. Transient trade also is improved. The retail stores are beginning to show a great activity in preparing for the holidays. Holly has made its appearance, and store fronts and show windows are putting on a holiday attire. In novelties there is nothing new or startling. The Christmas bell of scarlet immortelles is a back number, and so are the wreaths of cape flowers in various colors. The former is practically extinct; of the latter though quite a large quantity is being prepared for sale. Holly holds its old time popularity. Wholesale dealers report a heavy demand for this and other Christmas greens. The quality of holly is good, but is not berried very heavily, at least that which is on the market now.

Recent visitors: Harry Bayersdorfer and Martin Reukauf, of H. Bayersdorfer & Co., Philadelphia.

The committee of the Horticultural Society of Chicago had a conference with Alderman Madden last Thursday and mapped out a plan of work regarding the Lake Front park project.

St. Louis.

Dull weather has prevailed during the greater part of the last ten days, accompanied by continuous rain; stock of all kinds has felt the effect and has manifested a decided falling off in receipts. The demand continues good and seems to be in little sympathy with the lowering skies. Prices have advanced sharply and are manifesting unusual strength, as there is nothing left after the demands have been filled. Carnations that two weeks ago were plentiful, are now scarce, red varieties have been in demand in quantities during the week without a sufficient supply.

The prospects so far are that most growers will be rather short of roses during the holiday times, especially if the dull weather continues. With the exception of roses however everything promises to be in full supply. Ground pine has been received and several dealers have commenced making wreathing for standing orders, it being necessary to commence in time to have it out of the rush later. A store man, in speaking of the quality of ground pine used, stated that he never lost any of his through its being brown, the brown colored was rejected during the first going over, and when considerable had accumulated it was either tied in bunches or made into

wreaths and then dyed. Green aniline dye was used, about 25 cents worth emptied into a large pot of boiling water. Care should be taken to keep the water boiling while in use as the dye takes much better. The material should remain immersed only long enough to become moistened; as the strength of the coloring lessens with use additional dye should be added.

The single pipe system seems to have come to stay; most of the new steam work going in is of that order. Thos. E. Carroll has had his entire plant put under steam heat during the past summer with the above system, and is much pleased with it; he has not a valve about the place, regulating the pipes in use by opening or closing the air taps at the upper end of the runs. The boiler however, will not carry steam the length of time desired without attention and he is thinking of changing it.

J. M. Jordan has changed his steam heating to the single pipe system, and is very much pleased with its working, being able to have a circulation and warm pipes before any pressure is indicated on the gauge.

F. J. Fillmore is changing from the two to one pipe system; his two pipe system as constructed was not under sufficient control, and while altering it he changed to the latest fad. J. W. Dunford found the heater he had placed in position during the summer too small to do the work required, and is putting in a larger one.

Luther Armstrong has opened a branch store at Olive street and Spring avenue, this makes five stores within a radius of two blocks of Grand avenue and Olive street; it appears to be rather crowded.

Mr. Davidson, who has been connected with the Michel Plant and Bulb Co., for many years, has during the past week entered the service of H. A. Dreer of Philadelphia, and has gone east to assume his new duties, and it is needless to say he carries the good wishes of all the craft with him. R. F. T.

New Notes.

DIXON, ILL.—The 39th annual meeting of the Illinois State Horticultural Society was held here December 11, 12 and 13.

COLUMBUS, O.—The 28th annual meeting of the Ohio State Horticultural Society was held in this city December 12, 13 and 14.

LOUISVILLE, Ky.—Fred. Haupt has removed to a new store at 241 and 243 West Jefferson street, where he had an opening December 15.

FRANKLIN FALLS, N. H.—The greenhouse of Frank Huber was destroyed by fire on the morning of November 29. Loss \$1,000. Insured for \$400.

DUBUQUE, IA.—Florist W. A. Harkett supplied plants and flowers for a chrysanthemum show by one of the local churches, which was very successful.

OMAHA, NEB.—The Otto Buseck Floral Co. has been incorporated with a capital stock of \$2,500. The incorporators are Otto Buseck, Victor Buseck and F. Kurth.

TOLEDO, O.—The Park Board has received the proceeds from a recent sale of bonds and there is now \$68,374.92 available for the improvement of the parks.

DULUTH, MINN.—Quite a successful chrysanthemum show was held here by one of the churches. The plants and flowers displayed were all grown by florist A. C. Anderson.

LINCOLN, NEB.—There was an excellent display at the chrysanthemum show. The principal exhibitors were Messrs. Frey & Frey, Chapin Bros., John Shaw, Mills & Mosher, Lindley & Co.

QUINCY, ILL.—The "Quincy Florist Club" has been organized with officers as follows: G. Gross, Pres.; F. W. Heckenkamp, Jr., Sec'y.; John Kellar, Treas. The club intends to give annual flower shows.

MEMPHIS, TENN.—Mr. Albert Haisch, formerly of Uhlman & Haisch, has started a new concern, growing general greenhouse stock and cut flowers, with the title Albert Haisch & Co., at 422 Main street.

CHARLESTON, S. C.—The business of the late Samuel Webb will be carried on by his daughter and son until the property is sold. The Exchange Banking and Trust Co. have been appointed administrators of the estate.

PLEASANT HILL, Mo.—Geo. M. Kellogg has added 25,000 feet of glass to his establishment, giving him a total of from 80,000 to 90,000 feet, devoted to cut flowers. The foreman, Alfred Broman, to whom a large share of the success of the place is due, has been in Mr. Kellogg's employ for the past four years, commencing when the business was in its infancy.

OAKLAND, CAL.—Rev. Dr. Perkins has a plan for shipping fruits and flowers that will greatly reduce the cost if successful. He car when packed is deprived of air and carbonic acid air substituted for it. It is reported that a car was run to New Orleans and back, and on being opened the fruit and flowers were found to be as firm and from decay as when packed. Another experimental trip will be made this time to Chicago.

SALT LAKE CITY, UTAH.—There has been unusual activity in greenhouse construction here this season. Richard Evans has built one equal span house 20x120; C. Cramer, one three-quarter span 25x125; C. F. Pfau, three short-span-to-the-south houses, of which two are 18x100 and the other 18x112; the last named have been leased for a term of years by A. L. Murphy, of the Lafayette Floral Establishment.

WACO, TEX.—At the recent chrysanthemum show the largest display was that of James Morton, of Clarksville, Tenn., who brought a carload of plants and cut bloom. This exhibit was a show in itself. It was not entered for competition. In the competitions S. J. Mitchell, a Houston amateur, captured nine firsts and one second in the ten classes in which he entered. Other successful exhibitors were Chas. Mayer, a Waco florist, and the Dallas Floral Co., of Dallas.

SALT LAKE CITY, UTAH.—Trade is quiet here yet; very few parties; the bulk of trade the past ten days has been in funeral decorations. The florists' greatest grievance here is their coal bills. The poorest kind of slack costs \$3.00 and \$3.20 per ton; but there are very few days during the winter here that we have to keep any fire from 8 o'clock in the morning until 5 o'clock in the evening; the days are generally warm and bright. The first snow of the season fell on the night of the 6th inst. Chrysanthemums about all gone and everybody is glad of it.

PEORIA, ILL.—Trade for Thanksgiving Day was good. Everything in the way of good stock sold very readily, especially roses and carnations, but at lower prices than in former years. Fall trade has been moderately good so far, and we are all expecting a much better trade than last year through the winter. There is quite an increased call for violets this fall. Chrysanthemums sold better this fall than ever before. Cole Bros. gave a very creditable chrysanthemum show a few weeks ago that was fairly well patronized. Jas. C. Murray is adding another house 18x100 to his well arranged plant. This makes his sixth house and it would be hard to find a place better stocked, and with everything in such good healthy condition. One house of carnations is especially fine. Mr. Murray removed from 329 Main street to 401 Main street on the 1st of October, where he has the entire store to himself.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—As rose grower; have had 8 years' experience in growing stuff. Address G. care American Florist, Chicago.

Address THE AMERICAN FLORIST CO., Chicago.

WE LEARN that the illness of Mr. H. B. Beatty has been very serious indeed, and we are happy to be able to add that he is now gaining rapidly and hopes to soon be able to attend to business again. The trouble is with his heart and he will have to be very careful for some months to come, but is assured of eventual restoration to health. He is still at the Michigan sanitarium and is not yet allowed to attend to any business matters except those of great urgency. His many friends in the trade will, we know, join with us in wishing his speedy and complete recovery.

"MODERN GREENHOUSE CONSTRUCTION" is the title of a beautifully printed book of diagrams and views just published by Hitchings & Co., horticultural architects and builders, New York City. It contains a large number of photographic reproductions of palm houses, conservatories and commercial greenhouses which have been designed and erected by this progressive firm in various parts of the country. It is in reality more of an album than a mere catalogue and is a most appropriate souvenir of the completion of a halfcentury's honorable business record.

THE Missouri Botanical Garden has issued its sixth announcement concerning garden pupils. One new scholarship will be awarded prior to the first of April next. Applications must be in the hands of the Director by March 1. Pamphlet giving full details may be had by addressing Prof. Wm. Trelease, Director Missouri Botanical Garden, St. Louis, Mo.

F. SANDER & Co. are introducing a fine seed novelty, Tecoma Smithi, a hybrid from Australia which promises to be a valuable addition to the list of autumn flowering greenhouse plants.

PART 1 OF THE TRANSACTIONS of the Mass. Hort. Society has been received by us. It contains a full record of all the business of the society for the first three months of the year.

SEVERAL of the largest lily growers in Bermuda are reported to have consolidated their interests with those of two or more American houses and organized as "The Bermuda Bulb Company." These growers are reported to have obtained control by purchase or contract of a large percentage of the out-put for the coming season. It is claimed that this course was adopted by them to prevent the unwise competition which has compelled them to sell bulbs the past season at a loss. The total out-put annually from Bermuda is close to 3,000,000 bulbs. The following greatly-to-be-desired condition of affairs is reported to represent the policy of the company, viz., dispose of the crop through the large jobbers, confining the transactions to these houses exclusively, guarantee uniformity in prices, dump no unsold bulbs on the market at the end of the season, stop commercial shipping of cut blooms from Bermuda, rigid inspection of all exported bulbs. Results: "Mutual protection to the growers, conserving interests of large jobbers, ultimate benefit to the whole trade, by making a fair market; prevention of reckless cutting of prices, improving quality of bulbs, restoring confidence generally, etc."

BULLETIN No. 108 of the North Carolina Agricultural Experiment Station, comprising a report on the methods and uses of seed testing by the botanist of the Station, Mr. Gerald McCarthy, is a document of much interest and value. The results of several years of carefully conducted tests of the viability, purity and germination of seeds are given in a comprehensive manner, and the great value of such data to the seed trade and the public is convincingly shown. The establishment of a trustworthy standard of quality, by which dealers and consumers may alike buy and sell seeds, and of a standard process of testing seeds to define their quality are strongly advocated. Other interesting subjects considered in the report, which is a document of some 60 pages, are the seed control system in Europe, the structure and mineral composition of seeds, the effect of temperature, light, electricity and chemicals on their germination, impurities and adulteration and descriptions of the various devices in use for seed testing and separation.

THE MONOTONY of catalogue making has been most pleasantly relieved in the case of one New York seedsman. In other words, Mr. C. Cropp of Vaughan's Seed Store is a happy father.

LOS ANGELES.—Gustave Brose, manager seed department Germain Fruit Co., was married to Miss Mary I. Mausfield November 24.

VISITING NEW YORK: W. Brotherton, Detroit, Mich.; S. F. Willard, Wethersfield, Conn., and W. F. Dreer, Phila.

VISITED CHICAGO: D. M. Ferry, C. C. Bowen, Phil Breitmeyer of Lohrman Seed Co., Detroit.

THE Dingee-Conard corporation stock troubles are now being heard by the Phila. courts.

ONION SETS, SWEET PEAS

AND A GENERAL LINE OF FLOWER SEEDS, GARDEN TOOLS, ETC.

WANTED.

A few customers for regular shipments of ROSES and CARNATIONS, now until June 1, '95, from one to three times weekly. Send for prices.

GEO. A. KUHL, 708 S. 6TH STREET, PEKIN, ILL.

Clematis Jackmanni.

One year, nice dormant stock, for potting up for Spring sales, \$2.00 per dozen; \$12.00 per 100. All home grown. . . . F. A. BALLER, Bloomington, Ill.

CHRISTMAS TREES. 5000 Evergreen Trees, Norway Spruce, American and Austrian Pines, from 5 to 10 ft. high, fine, shapely trees, nursery grown, surplus stock; will be sold at low rates in lots to suit purchasers. For prices address Jas. A. Taylor, Nurseryman, Kalamazoo, Mich.

Toronto.

The florists' business is just about as bad as it can be for this time of year, so I am told. The supply of flowers of all kinds is far in excess of the demand and in consequence prices are away down in B flat; no money in it either for growers or retailers. One man told me he believed that 30% of the cut flowers coming in to town went to waste. This is a melancholy wail to have to make, a pastime I do not often indulge in. I am afraid too that we are not going to have turkey for our Christmas dinner this year. I did hear a rumor that one of the big growers had approached another with a view to forming a combine, but can not vouch for the truth of it yet.

Chrysanthemum bloom is still coming in in considerable quantities, but a great deal of it appears to be very poor stuff and won't sell anyway. The quality of the roses and carnations could not well be better; it is really sad to see them selling at such miserable prices. It is sincerely to be hoped that business may improve during the next three or four weeks or the consequences may be dire for some of the weaker ones.

Mr. Ewing says it is a girl this time. E.

Kansas City, Mo.

All the florists of Kansas City met at the store of Probst Bros. Floral Company, 1017 Broadway, and formed a Florists' Club, all but one firm responding. There were twenty-three present, representing 135,000 square feet of glass. The officers are: R. S. Brown, president; E. G. Heite, vice-president; S. Murray, secretary; F. Brown, ass't. secretary; Arthur Newell, treasurer.

The next meeting will be January 11th, at office of R. S. Brown & Sons. Everyone paid his initiation fee and first quarter's dues, and all are in good spirits. At last meeting a constitution and by-laws were adopted.

Trade at Thanksgiving was very good, and still continues so; but good stock is scarce.

In town: James Hayes, Topeka, Kans.; L. J. Stuppy, St. Joe, Mo.; Geo. M. Kellogg, Pleasant Hill, Mo. S. M.

THE AMERICAN FLORIST (\$1.00) and Gardening (\$2.00) together to one address for one year for \$2.50. Send orders to American Florist Co.

Florida By Lookout Mountain.

Tourists and others in choosing a route to Florida should not miss the opportunity to visit Lookout Mountain, scene of the famous battle "Above the Clouds," with its magnificent "Lookout Inn," now open. It would be well, therefore, to bear in mind that the Nashville, Chattanooga & St. Louis Ry. is the only line passing around Lookout Mountain. "Dixie Flyer" through sleeping-car by this line from Nashville to Jacksonville, Fla., carries you in daylight via grand old Lookout Mountain, Kennesaw Mountain, Atlanta, Macon and Tifton. Quick-step through sleeping car line over same route St. Louis to Jacksonville leaves St. Louis 7:50 a. m. and Nashville 9:10 p. m. daily. Sleeping car berths can be reserved through from Chicago to Florida. Address Briard F. Hill, N. P. A., 194 S. Clark St., Chicago, Ill.

WANTED!

A good, free blooming, healthy, vigorous **Yellow Carnation.** Flowers must be perfect, of fair size and borne on long, stiff stems. There must be plenty of pips, and these easily rooted.

AND HERE IT IS—Any one of the following will fill the bill:

ELDORADO—Pure yellow ground edged with light pink. Picotee marking.

KITTY CLOVER—Light yellow striped red with a little white.

EULALIE—Yellow ground penciled with pink.

We also offer this year

PRINCESS BONNIE—A beautiful pink variegated flower of large size; and
DAISY BELI—A white, variegated similar to Chester Pride, but very much larger flower.

Send for general price list of both Carnations and Coleus.

Milwaukee.

The Milwaukee Florists' Club's 4th annual show was not a financial success, but it was the best Milwaukee ever had. According to the view of the expert visitors the exhibit of cut "mums," roses and carnations did not stand behind that of any other city. The judges, who did their work in the most satisfactory manner, were C. B. Whitnall, J. A. Pettigrew and C. H. L. Mann.

At the meeting which was held December 4 it was decided to settle the financial question as follows: To pay the premiums in full to outside exhibitors and non-members, and 60 cents on the dollar to the members of the club.

A. KLOCKNER, Sec'y.

"Violets Blue."

What a fund of good solid information the reporter for the daily press gathers in when he visits a greenhouse establishment. Below we reproduce a few extracts from a recent daily paper article on a "flower farm."

In the hothouses of the Meadow Spring Farm are twenty-two thousand violet plants. The Marie Louise, this season's bloom, is the largest ever grown, the actual measurement of many being two and one-half inches across; the stems are long and almost as thick as those of carnations; the color is very dark blue, with a little light tinting in the closely folded leaves of the center.

Some of these houses are heated by steam, but in the newer and more improved ones the flowers receive only natural heat, which comes through the glass covers, and on the north side are banked with straw and earth. When the severe cold comes these glass tops are covered with frames of wire netting, filled in with hay, and it is believed that the flower is sweeter grown in the cold houses, where there is no possibility of forcing it.

The bunches are made up with great generosity, costing \$4 a hundred, and prices never vary.

"There!" said he, holding up a stem upon which were six magnificent blooms of Golden Triumph, "has there ever been anything in carnations to beat that or approach it? And each bloom four inches across."

ACME FOOD FOR Vines, Plants, Fruit Trees, Flowers, and Greenhouse use.

One hundred pounds of this concentrated, soluble and odorless fertilizer contains as much food for plants as One Ton of sheep, cow or horse manure. Try a 5 pound box for \$1.00 on your Roses or Carnations, Smilax, etc. Send for descriptive circular. Can be applied dry or as a liquid; the dry food must not come in contact with the stem of plant.

Put up in boxes of 1, 2½ and 5 lbs. each, with full directions; sells at 25c., 50c. and \$1.00 per box. Sample boxes, postpaid, 20c. Discount to the trade.

HERMANN RÖLKER,
218 Fulton Street,
NEW YORK.
Mention American Florist.

Washington.

Flowers of all kinds are scarce, particularly roses, and the quality is not up to the standard. No one seems to have a good crop of roses at present: whether this is due to the efforts of some of the florists to keep their flowers back for the holiday trade, or whether it is purely an accident I can not say. The demand for flowers the past week was an improvement over what it has been for several previous weeks. The social season has not fairly opened and it is not expected that trade will be very brisk until after New Year's Day, which usually marks the beginning of receptions, dinners, teas and other doings of the social world which calls for the aid of the florists.

Chrysanthemums have had their day and are now a thing of the past, consequently the prices of the other flowers has slightly advanced and the demand for them increased. Roman hyacinths in pans, and azaleas and poinsettias in pots are beginning to attract attention to the florists' windows. There is no demand yet for house plants such as rubbers, palms, pandanus, dracenas, etc. The only plants selling are such as have flowers on them. REYNOLDS.

Destroying Moles.

A correspondent wants to know how to exterminate moles without the use of traps. They can be driven out of their runs by the use of kerosene. Find where the runs are and with a stick make holes a few feet apart, pour in a tablespoonful of kerosene and the destructive little brutes will vacate their hunting ground. There are traps made especially for catching moles and that would be the only way to exterminate them. They are not so generally a nuisance here as in Great Britain, where in a single night many a fine lawn is sadly disfigured. In England the mole catcher is a professional man, and of as much importance in the community as the insurance agent. W. S.

"Proof of the Pudding"

KENT, O., June 4th, '94. THE LOCKLAND LUMBER CO., Lockland, Ohio. Dear Sirs:—The Cypress lumber furnished by you for the erection of our greenhouses has enabled us to erect substantial and neat appearing buildings. The drip groove rafters are very strong and very neat in appearance, so much so, that passers by, while they were being primed, asked what we were going to use the moulding for. We are particularly well pleased with the square cut Red Cedar posts, these being well adapted to our method of erection. The ridge and side plates of the Cypress material are also very strong and neat, likewise the strong doors of same material, which stay right there; a great thing in a greenhouse, where there is always more or less moisture. Will build again in the near future and of Cypress material sure. Yours truly, GEORGE F. BRAYBON.

GUTTER MATERIAL, RIDGES, SASH, ETC.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipple Doppf & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppf and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all. Send for price list and samples and we know you will give us an order.

SOCIETY OF AMERICAN FLORISTS.—Mr. W. N. Rudd, secretary and superintendent of the Mt. Greenwood Association, Chicago, Ill., has been appointed on the executive committee, to fill out the unexpired term of Mr. H. B. Beatty.

THE annual reports of the conventions of the Society of American Florists show an improvement each year. In the report for 1894 we notice that Secretary Stewart has made the index much fuller than heretofore. This is a step in the right direction, and is to be warmly commended.

THE RETAIL TRADE.

The Christmas Rush.

Preparations for the holiday trade will be about completed by the time these notes go to press. The trade in Christmas greens and other holiday decorations is now well under way and the sooner we can get this stuff off of our hands the better able we are to handle the cut flower trade next Monday and Tuesday. So let us clean the decks of this material as much as possible before the real rush begins. As far as practicable all orders for these goods should be sent out before the eve of the holiday. This of course can not be done in every instance, even on advance orders, as often the buyer will insist upon having his goods delivered at a specified time. Many of your customers will of course send in their orders for this class of goods at the last moment and you are obliged to handle them at the time when you would rather wish that "Christmas greens" weren't in existence. However, if we have a stock on hand it must be worked off no matter how pressing the time. Engage plenty of help, and competent help it must be too, or else it is no help at all. Don't expect your head salesmen to drop their work behind the counter to wait on a customer for a 25 cent wreath of holly. Systematize your work thoroughly and as far as possible assign your men to positions best suited to their ability. Put a good salesman in charge of your department for greens and decorations of this class, or several if your business warrants, and don't let him bother his head about cut flowers. Such a person need not necessarily be a florist; any good salesman or saleswoman will get the run of prices in a short time and is able to attend to this duty satisfactorily. You want a handy boy to do your wrapping of bundles and packages; and above all an intelligent person to keep posted on orders is most necessary. If you have a regular bookkeeper this is his duty; if not put an efficient clerk in charge unless you are able to supervise this department yourself. Remember it is of the utmost importance that no orders be overlooked and that everything is sent out on time. Don't make the mistake, as some of us are apt to do in a rush, of neglecting small and comparatively unimportant orders. Such neglect may cost you a good order in the future and will injure your business in every way. In our larger cities you can bring the regular messenger service into requisition, but no matter what the means or the cost so long as orders are taken for delivery the goods must go out on time even if the extra expense of delivery eats up the profit.

But now about cut flowers. Your orders for stock have of course been

placed by this time. Although the commission men or the grower, if you deal with him direct, will not give you a written guaranty that your order will be filled to the letter, you will, or ought to have, a fair idea of what stock you might reasonably expect. Of course in ordering your supply you work somewhat in the dark; in fact it is more or less a speculation. Comparatively few people place their orders ahead any length of time and therefore you are unable to tell just what and how much you do need to supply your demand. Things have changed considerably since the palmy days along in the eighties. In those times everything in the shape of flowers could be sold at the holidays and at a good profit too, and the danger of overstocking was not very great. But at the present time, especially when prices are up to the top notch, it behooves us to be mighty careful. If you have been through several of the holiday campaigns in later years you will see the force of these remarks, but even then you are not sure of your ground. But on what basis can we make our calculations, both as to supply and prices? Shall we take the state of the market for the week preceding as a safe criterion? If the market is low and the supply is plentiful we may feel warranted in expecting these conditions to have its influence as regards prices for the holidays, and if the figures asked for advance orders by the wholesale dealers (which is at best but speculative) seems too high, we may be inclined to hold off placing our orders, taking our chances on a break in the market. But here we forget the weather clerk; if he pulls on your side and serves up clear and bright skies you may win out, if not you are left. On the other hand stock being scarce and consequently high a week or two before the holidays you argue that under those conditions you can not expect to stand out for low prices and you eagerly embrace the chance (at good round figures) which is offered you (reluctantly) by the wholesale dealer of placing your order. But alas! you again reckon without your host, you have forgotten entirely that the shipper of pickled stock is still doing business at the old stand. In rushes the stock and down goes the price. You have contracted to pay \$15 for your roses and your smart competitor who held off buying to the last minute buys the same stock for \$8. On the whole it seems the safest course to contract, if possible, for at least a good part of the supply you expect to use; sufficient at least to supply your regular patrons; on the balance you might take your chances. But are we sure of receiving a first-class article if we contract to pay a first-class price for the same? This is a question which too often has to be answered in the negative. But we should insist on it; it is the greatest kind of an imposition to exact a first-

class price for a second or third rate article. If the goods are not up to grade at which prices are made reject them. To pay \$15 per 100 for roses which at retail are barely worth \$1.50 or \$2 a dozen is worse than folly. To charge your customers \$3.50 or \$4 a dozen (which price includes your legitimate profit) is worse still. Be content to do a smaller business rather than contend with the work and worry of handling a lot of stuff which yields nothing in return but a magnificent crop of "kicks" from your pet customers.

But now that you have solved the difficult task of procuring a good stock of material let us hope you haven't neglected a few small but very important things. The weather is balmy and spring-like to-day, are you prepared for delivery at a temperature of 15° below zero? Is your wrapping material ample for all demands that might be made for it, and is it kept handy for instant use? How is your stock of boxes? Don't neglect to provide a good stock of large "packers," you may need them. There is nothing more exasperating than to run short of proper packing material when you are caught in a rush of business. B.

Carnation Notes.

The value to the trade of the coming convention of the American Carnation Society to be held in the grand old city of Boston in February next will be very great. The growers who have never attended these meetings probably consider that they get a full synopsis of the proceedings as published in the trade journals, but this is but a small part of the benefits derived. The sessions take up about four hours per day and the balance of the time is devoted to examining the flowers on exhibition and in general conversation. There was a time when conversation between growers brought out very little knowledge beneficial to each other, as the greatest of secrecy was then the rule, and one grower would never think of telling another of any method of growing that would serve his neighbor; fortunately those times are of the past and if a man fails to acquire knowledge in any form to-day it is his own fault, and there is no place where so many points are gained as at a gathering of a number of growers in any special line.

The exhibition to be held at the convention will undoubtedly be the greatest show of carnation bloom and plants ever seen in this country, and this fact alone will be well worth the time and expense incurred in attending, as all of the new sorts to be introduced the coming year will be shown to secure the approval of the society and a certificate. The prizes offered will bring out a large display of the standard sorts as grown to-day, thus giving a chance for comparing old and new, and right here I would advise anyone showing a new seedling to exhibit not only the bloom but also a plant which has been grown in a pot for at least a month; this will show to the people what most growers wish to see now before purchasing, the general habit of growth. If it is worth your time and expense to exhibit, do it as thoroughly and

well as lies in your power and the results will well repay you. It is often said that flowers of the carnation can not be packed to carry in safety long distances and be fit for the exhibition table. This is certainly a very great error, as it is a simple matter to follow instructions given in this column several weeks ago as to packing for market, only I would advise a strip of thin tissue, or what is still better, waxed paper between each row of flowers, thus securing to a great extent the flowers from bruising each other.

The Mass. Hort. Society have very generously offered the use of both of their halls, the upper one for the exhibition and the lower one for the meetings, to which everyone interested is cordially invited. Several of the executive committee were in Boston last week perfecting arrangements for the convention, and they wish me in this column to extend their hearty thanks for the courteous attention shown them by the gardeners and florists of Boston. The committee was taken in hand even upon arriving at the boat of the Fall River Line before leaving New York by our friend Stewart and attention never stopped until the departure of the train for home.

While in Boston we had the pleasure of taking a trip to the houses of Wm. Nicholson at Framingham. His place is in perfect order and every plant shows remarkable vigor and health. Ferdinand Mangold does splendidly with him, producing large fine flowers upon very good stems and better plants would be hard to find. Hector, a variety seldom seen in the vicinity of New York, does well as does also E. G. Hill and Mrs. Fisher. The latter is the standard white in and around Boston. But the pride of Mr. Nicholson's heart is his namesake, Nicholson; no wonder, for this sort does more than well with him, producing large, well developed bloom upon an A1 stem and in great abundance. As this variety sells better in the Boston market than Wm. Scott it is likely to become very popular. Mr. Nicholson has a new white seedling which up to date has proven a success and will undoubtedly be heard from in the future. Daybreak, Scott and McGowan are also doing finely as does everything else which Mr. N. handles. There seems to be a charm in this growers fingers which many would be glad to acquire.

We also had the pleasure of calling upon Mr. Sewall Fisher, a near neighbor of Mr. Nicholson, where we saw a house about fifty feet long by twenty wide which was a great treat, as it contained a large number of new varieties, some of which would certainly have been on the market long ere this had they been in the hands of some other grower, but Mr. Fisher prefers now to test all of his seedlings four or more years before disposing of them. Among the most noticeable of his productions is a crimson, as good a flower as we have ever seen in this color, rapid grower, foliage somewhat like Scott, the only drawback as seen was its stem, which was a trifle weak. Crystal is a very good white, finely shaped flower and excellent habit in growth. There are also two other whites which show up well, one being of a dwarf habit with flower of fine texture and very large smooth round petals. Mr. Fisher has also several promising scarlets but in our opinion a little off in color. It was hard to part with Mr. F. as a house containing principally seedlings has a great fascination for every grower of carnations.

Our next stop was at Coolidge Bros., South Sudbury, J. Butterfield, superintendent,

where Mrs. Fisher is grown almost exclusively and it is done to perfection. Here were flowers that would measure three inches and the quantity of buds to the plant was something astonishing. He also has about five hundred plants, and such plants, simply immense, in fact the finest plants of this sort I ever saw and that is saying a great deal.

Our trip was more for the purpose of visiting the carnation growers but as Waban Rose Conservatories were in the same route we called on Mr. Montgomery and the grower who goes within hailing distance of Boston and does not run out to Natick to visit this rose growing plant misses one of the greatest sights on earth. A cleaner, more orderly range of houses is not to be found. Such Brides, Mermets, well we thought we had seen roses before. I was told last summer when in Boston that New York never saw the best Brides and I was inclined to think there was a little conceit in and around Boston, but that is all right, it was all truth; we acknowledge the fact.

CHARLES H. ALLEN.

Carnation Uncle John.

No variety seems to have met with so much favor and disfavor, about equally divided, as the Uncle John, and of all the varieties sent out by us, of none have I formed such a high opinion combined with pleasure and satisfaction as this. At this time I have a bench of this variety that eclipses all my former efforts.

Every new carnation has to break its way into public favor by its own merits, and when once thoroughly understood comes out victorious. Many a new plant has been shelved on account of its natural habits not being understood and consequently its culture more or less wrong.

At our present time when so many varieties, good and worthless, make their appearance, one is inclined to grow suspicious and look at all new things with disfavor, and at the least unfavorable results will throw the whole stock overboard without taking the trouble to ascertain as to the cause of failure. If we all would do the same we would go backward, not forward. Only by prying into nature's secrets, by rehearsing our treatment and making comparisons can we get light. In other words, we have to experiment. We are not ready enough to take nature's hints and reason therefrom; we are apt to fit everybody's shoe over the same last; we are too much accustomed to our own methods, and want to bend nature's ways to our habit of growing things.

I will give my experience with this variety. In the first place Uncle John is the strongest grower that has so far come under my hands, and an equally free bloomer. All the reports last fall show this: That everywhere Uncle John has made the strongest plants, and this through a very dry summer. I repeat again through every dry summer. The seed plant was the largest of all my batch of 1891 seedlings; it has since been the largest every year, and we have had dry summers for the last five years. Can we not take the hint nature has given us in regard to this variety?

We will first consider its exceptional strong growth regardless of the dry atmosphere. The cry went up "Uncle John takes the rust; it is full of bacteria." It surely had no disease when growing in the open dry air, or else it would not have made such large plants. The disease made its appearance when the plants were brought into the moist houses,

THE VERY REV. S. REYNOLDS HOLE.

Have not Dr. Arthur, Prof. Bailey and others told us that spores of fungoid growth germinate quickest in a moist atmosphere, and to guard against keeping the plant wet? My success in growing this variety, and others as well, is in heeding these hints and bringing them into practical use in the houses.

When we house our plants we give them plenty of bench room. We planted ours a full foot apart each way, and already at this time they would require more room, having grown together so that by looking over them now no single plant can be distinguished. Its strong growth demands space, and fifteen inches would not be too much. Give a plant freedom in its growth, health and an abundance of perfect flowers will be the result. Crowd them and impair its growth, disease will find ready lodgement in a short time.

When transplanting from the field we use more shading and less water. Before we commence to plant a house we apply a heavy clay wash on the glass. This makes the house cooler and we can use less water. If rainy weather should follow it will wash off the shading, and if it should take it off too soon it will pay to renew it if necessary. Then it can be washed off gradually so that the plants will not at once be exposed to the sun. This year for the first time we use the wire netting as described in No. 330 of the AM. FLORIST and find it a wonderful help to keep the plants in a healthy condition. Although grown together our Uncle John have between the rows on the ground an open space six inches high and six inches wide. This insures a good circulation of air when needed, and here we apply the

water by pushing the hose across the bench. In this the netting is also a safeguard to the plant. We never allow the foliage to get wet and only syringe when we want to apply the copper solution which we use every two or three weeks as a preventive.

This fall I had a striking example with a bench of Albertini. Being sturdy upright growing plants I did not think it necessary to use the wire netting. At the same time I was afraid of breaking or bruising the plants when pushing the hose through between the plants, so we watered over the plants whenever needed. Being nice sunny weather we supposed no harm would come from it, but once or twice too late watering in the day and once getting caught with cloudy weather following right after, brought us a full crop of spot, the whole bench being affected. Two strong doses of copper and cleaning the plants set things to right again, but I lost a month's growth by thinking it "good enough" and "I guess it won't hurt."

It has been proven that one variety is more subject to disease than another. I have had no experience with the rust, but I am convinced that the spot will always follow mistreatment and neglect. And it seems strange to me that Uncle John, with its vigorous growth, shall be one of the first to fall a prey to disease. And still more strange it is to me that right in localities where they reported Uncle John the best and strongest grower the cry is now raised "Uncle John is a failure, we have to throw it out." The plea that this variety is not adapted to the locality will not hold, for it would not make such a splendid summer growth if it were not.

My experience has been that when I could not grow a variety it was a failure in its summer growth as well as through the winter, and in this way showed its entire inadaptability to the location. When soil and climate is suited through the summer, why should it be adverse in the winter under glass when we have the power to regulate.

As I said before we do not study nature's workings close enough; we want to suit things more to our convenience and liking, and most times make sorry failures. When we are compelled to cope with disease we have to make it as uncongenial for it as possible and fight it.

At the last meeting of the Carnation Society at Indianapolis the remark was made that we would have to grow varieties that will not be affected with the rust. An effort was made to find one that never was affected with the disease, but proved to be a failure. If free in one locality, it was found diseased in another.

All I have said in regard to Uncle John will hold good with any other variety. At our place we give them all the same treatment, and if anyone will think it worth while to visit our houses he will be convinced of this; that, given the proper treatment, Uncle John is one of the most profitable varieties grown.

Lafayette, Ind. FRED DORNER.

New Carnation Names.

The following have been registered with the committee of the American Carnation Society since the last report printed in the FLORIST:

By H. Grout, Springfield, Mass.: The Grout, scarlet.

By Mrs. Chas. T. Starr, Avondale, Pa.: Lonesa, variegated pink on white ground; Marie Starr, white; Chas. T. Starr, scarlet; Mrs. Chandler, red.

By Taylor's Greenhouses, Dunkirk, N. Y.: Lake City, pure white regularly striped with deep pink.

By W. R. Shelmire, Avondale, Pa.: Daisy Bell, white penciled with bright red markings.

By W. J. Snow, Waterbury, Conn.: Agnes Snow, pink.

By J. N. May, Summit, N. J.: Dean Hole, Maud Dean, Lily Dean, Lena Saling.

By Edward Swayne, Kennett Square, Pa.: Jack Frost, white.

By W. P. Simmons & Co., Geneva, O.: Rose Queen, pink.

By Thompson Bros., Kennett Square, Pa.: Lawrence Thompson, pink.

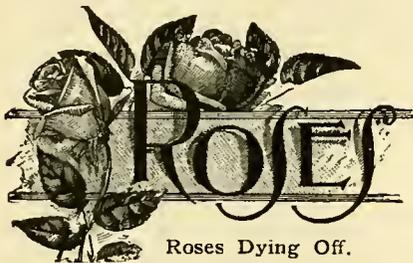

By the Redondo Beach Co., Redondo, Beach, Cal.: Miss Donnelly, deep pink; James Corbet, coppery; Panchita, white striped carmine; Paloma, pink center, white edge; Mrs. Sproule, carmine pink; Marina, light scarlet; Mrs. Childs, blush, striped pink; Chuseo, cream, striped lilac; Dr. Patzki, light pink, striped red; Arcadia, very light pink; Mary Shepherd, pure white; Casa Blanca, pure white; Los Angeles, pure white; Amado, pure white; Preciosa, pure white; Ida Feder, light pink, striped carmine; Souriza, white, striped and painted lilac; Encanto, light pink, edged blush; Conchita, light shell pink; Moreno, dark crimson; Gov. Markham, white, shaded and penciled carmine; Dr. Marchand, yellow, striped red; Dr. Del Amo, white, striped and edged with crimson; Orifino, pure lemon yellow.

Lancaster, Pa. ALBERT M. HERR.

The Very Rev. S. Reynolds Hole.

England's greatest rosarian needs no introduction to the readers of the AMERICAN FLORIST. There is probably no man

living whose name is more honored by florists and flower lovers the world over than the cheery, sympathetic, big-hearted author of "A Book about Roses" and "The Six of Spades." Dean Hole, who is now lecturing in America, is a man of most striking individuality, of commanding presence and stalwart figure, and has been well termed a fine example of muscular Christianity. In his addresses, as in his writings, he is earnest and fascinating, his conversation bubbling over with delicious humor, and his face fairly radiant with kindly good nature. Next to the flowers themselves his most cherished companions are those who, like himself, love the fields and flowers, and he is never happier than when in the company of the gardeners and the florists. Few men there are who can look back over a long life so productive of good, so influential for purity. One life such as Dean Hole's is worth more to humanity than that of a thousand rigid theologians. We need more like him.

Roses Dying Off.

Can you tell me the cause of my roses dying off at the top when in full crop? I enclose a sample of the wood. The Bride, Mermet and Niphetos are most affected. Have had to cut the plants down nearly to the soil, and the old wood turns brown in places. The trouble began early in October.

READER.

Ontario.

Judging from the samples received and his description I believe the trouble has been caused by allowing the temperature to drop a little too low at the time time he names (beginning of October) in conjunction with a little too much moisture.

At that season of the year such cases as his have often happened, more often in past years than at the present time, as growers generally now understand the importance of watching the conditions carefully and avoiding such as would produce this trouble. On two or three occasions I have written articles warning growers that such trouble as this would very likely be the result if precaution was not used to avoid it and I am afraid many of your readers will think me very tiresome to keep repeating it so many times, but the present case and some others I have heard of this season can only be covered by doing so again.

During the fall it often happens that the temperature outside is hardly cool enough to warrant making fires for the greenhouses, the inside thermometers not falling below 56°. Under these conditions a dew forms on the young foliage and in the early morning it is a beautiful sight to go through the houses and see from the edges of the leaves miniature sparkling pearls suspended. Under such conditions the wood becomes very soft and let these conditions be repeated for two or three nights in succession and the result will be that the next bright sunny morning a careful observer will see some of the youngest leaves begin to wilt as if the plant was wanting water. Should the

sun remain bright for a few hours a large proportion of the young foliage will have the same appearance and in an incredibly short time they will begin falling off and much of the young wood turn a dark color. I have seen the wood die back to the older growth in three or four days from the time it was first discovered. Of course it is much worse in some cases than others. Should there be any part of the house which from various causes has more moisture than any other here it will always be the worst. In many cases I have known the trouble to increase very materially by the person in charge thinking the wilting was caused by want of water and giving a syringing. This is as bad as taking a pneumonia patient and giving him a cold bath. If he survives it he will be regarded as disease proof or else a confirmed invalid forever. The poor rose plant that survives the above treatment will be in about the same condition. To avoid this, as soon as the weather begins to feel the least bit like running the outside temperature down below 60°, start a little fire in the house, just enough to dry up the surplus moisture and prevent the forming of dew on the plants. If this causes the temperature to rise too high leave on a little air at the top ventilators. This is equally applicable for spring as well as fall. This treatment is the only safeguard for plants that growing freely with the wood soft, such as it usually is in houses that are intended for growing roses in fall and winter. Much of the danger from this trouble can be averted by keeping on air day and night as long as possible in the fall, thereby making the plants more robust and hardy, and if it is absolutely necessary to do without fires under such conditions as above, then hold the plants considerably drier, so as to make the wood moresolid, and above all avoid everything in the way of moisture in the house except in the morning and that only on bright days. Plants treated thus will not make so much growth but what they do make will be solid and when the fire heat is applied they will very quickly respond and give much finer flowers than those treated to too much heat and not enough air. Nature, the great and only true teacher, tells us this as it does many other things which should be of much more service to us than they are.

JOHN N. MAY.

Twelve Varieties in one House.

How shall I handle the following varieties of roses, all growing in the same house: Watteville, Sunset, Perle, Gontier, Bride, Bridesmaid, Wootton, Beauty, La France, Testout and Kaiserin. The house is 60x13, heated by hot water.

Cleveland, O.

DARBY.

Replying to above, would say that this is rather a difficult question to answer satisfactorily, as the varieties he names are some of them of different classes, consequently require somewhat varied treatment to obtain the best results, but being all in the same house this is rather out of the question. As it is I should advise adopting the treatment most suitable for the largest number. Presuming that these are of the tea class, from the list given, give them the treatment most suitable for this class, which would be an average night temperature of 56°, with 62° or 63° by day when cloudy, and on bright days begin putting on air as soon as the temperature reaches these figures, gradually increasing it as the thermome-

ter rises till it gets to 76° or 78° with abundance of air on. As soon as the temperature begins to decline in the afternoon reduce in the same proportion. Water freely when the soil shows a little indication of getting on the dry side; syringe or hose the plants every fine day, but do not water again till the plants need it at the roots. Keep all insects off by fumigating or otherwise, and keep the plants free of dead leaves and all weeds and rubbish from the soil. When the soil indicates that it is getting a little on the dry side give liberal waterings, and then let it go till the same conditions present themselves again; meantime syringe the plants freely every fine morning. By following this treatment really fine flowers can be obtained of nearly all the varieties named by "Darby." Those that will not do so well with this treatment are Papa Gontier and Wootton, which really require a somewhat cooler treatment to get them in perfection. American Beauty also requires a somewhat graded treatment from above to do it justice. Furthermore its habit of growth makes it unsuitable to grow mixed up with so many others, and while La France and Mme. Testout can be grown in the same house with teas it is not advisable to place them there if it can be avoided, for while the system of treatment is the same for both classes in the main, yet there are little items in their treatment which differ and though small in themselves yet of vital importance to the plants. Far better to confine the varieties to one class and take the very best varieties at that; grow these really well, and there will be much more satisfaction with them, and the number of flowers obtained during the season will be much greater than when so many varieties are grown together in one small house.

The general laws governing plant life are in many respects identical with that of the animal kingdom. The main factors conducive to the health of both are cleanliness, fresh air, plain wholesome food, taken as required only, and for the balance good plain common sense will supply it if only applied; at least such has been the experience of JOHN N. MAY.

Rose Growing in Denver.

We present herewith an engraving from a photograph of a house of Bridesmaid roses at the establishment of the establishment of the Colfax Floral Co., of Denver, Col. The photograph was sent us by Mr. Elijah A. Wood, who says it is forwarded to show what is being done in rose culture in the far western country where it has always been claimed that it was impossible to grow roses with more than six inches of stem. The house illustrated certainly shows a fine lot of plants in excellent condition, and is a good example of progress in the Colorado capital.

Orchids for Christmas.

Among Christmas orchids, calanthes and the varieties of Cypripedium insigne will occur to all. Dendrobium Ainsworthii can well be depended upon if enough stock is carried. It is as easy or easier to increase than noble. D. Schroderianum and the allied D. bigibbum are

A DENVER ROSE HOUSE.

the most durable in flower of all orchids. I have had *bigibbum* keep in good condition on the plant from November till March.

The *phalaenopsis*, such as *amabilis*, etc., often flower at Christmas, they endure fairly on the plant, but are next to useless as cut flowers, so fugitive are they. *Saccolabium giganteum* on the other hand will keep a week or more, and in the better varieties is a superb flower, with a most delicious fragrance.

Cattleyas Percivalliana and *Trianae* are the reliance for Christmas. *Laelia anceps* and *L. anceps alba* both flower in the early varieties especially if freshly imported. Some trouble was often had with the latter, from its susceptibility to damage in transit. The importations arriving when first discovered mostly lost their dormant buds. It is one of the latest growers, and needs the heat kept up well at the end of the season. It is a splendid thing when well done. *Lycaste Skinnerii*, and also *Oncidium Lanceanum* can both be managed for Christmas. To my mind the latter plant is far ahead of any cypripedium, and being so easy to grow and increase, it is strange, seeing it often blooms twice a year, to find it neglected. It will not stand any "cool treatment" nonsense however.

Odontoglossum pulchellum majus if you can get it in good varieties is a gem. It is sure to bloom and grow twice a year and can be divided and grown as readily as a *lyciste*. Such orchids as this *odontoglossum*, which expect to grow after flowering in midwinter, should have a grow-

ing temperature given them by those who desire to flower them, and house of whatever size distinct from the general collection, which is now very largely at rest.

Trenton, N. J. JAMES MACPHERSON.

Cypripedium H. Ballantine.

This pretty hybrid is one of the *Fairieum* crosses, the result of crossing *C. purpuratum* with *C. Fairieanum*, and was first raised by Mr. Seden at Veitch's. The year following we flowered about one-half dozen plants of the same hybrid, which we raised here. Some of these were more beautiful than the original sent here by Messrs. Veitch.

The plant is of dwarf habit, leaves about five inches in length and about one inch wide, light green and faintly tessellated, varying in some plants. Flower scape nine inches long, dorsal sepal one and one-half inches broad, the same in depth, white ground, green at the base, with blackish purple longitudinal lines up the center, the side lines beautifully reticulated with vinous purple. The petals two inches long by three-quarters of an inch broad, drooping gracefully, upper half pale green at the base gradually shading to vinous purple, the basal half white shading to purple; the upper portion heavily margined with deep purple and undulated, the lower portion margined light purple and beautifully ciliated. The surface of petals three parts their length from base are densely and regularly punctated with minute blackish purple spots. Staminode light purple,

reticulated green. The infolding lobes of pouch rich vinous purple densely spotted; upper surface vinous purple, lower and front portion light green heavily veined.

This is probably the prettiest of the *Fairieanum* crosses so far raised, and each year it becomes stronger and more beautifully marked, while some complaints have been made about difficulty in its culture owing to its parentage. We grow the plants in shallow pans, also small baskets, in about equal parts of fibrous peat or fern roots and good fresh sphagnum and keep them suspended from the roof at the warmest end of our *cattleya* house about ten inches from the glass and they grow and flower finely.

Our other *Fairieanum* crosses are *C. vexillarium*, *C. Juno*, *C. Niobe*, *C. Edwardi*, *C. Arthurianum*, *C. Arthurianum pulchellum* and a new hybrid we have raised and now flowered for the first time, a *tonso-Fairieanum* cross and we propose to name it *Mrs. F. L. Ames*.

WM. ROBINSON.

North Easton, Mass.

Foreign Notes.

In the rose analysis for 1894, published in the London *Journal of Horticulture*, which gives, in tabulated form, the rank of many roses, calculated from their standing at the various shows, we find, at the head of the hybrids *Mrs. John Laing*, a position it surely deserves. *Mme. Gabriel Luizet* follows it, while *Her Majesty* is seventh. Our old friend the *Jaqu* is twenty-first. *Magna Charta* occupies a

very low place, being sixty-first. Among the teas and Noisettes Catherine Mermet is first, The Bride third; Mme. Hoste is sixteenth. Meteor, which would rank high among American favorites, does not appear at all.

New York.

Cut flower trade during the past week has been generally satisfactory, there being no over-production of anything, excepting violets; of these there have been more than the market would take at the prices asked, viz., \$1.50 to \$1.75 per hundred for the best quality. We have always believed it to be a mistake to encourage such an advance in price of violets, as has been the case early in the season for the past few years in New York. Perhaps it can not be helped, as the demand for a short time is far in excess of the supply, but it certainly has an injurious effect upon the mid-winter demand and sale for violets. There has been stock carried over in retail and wholesale establishments almost every day recently, and these have necessarily been sold at a very low price eventually, as no flower deteriorates so rapidly as the violet. It follows, also, that the growers in the present slack time are not picking their full production, but are holding them for the holidays, and the indications are that of violets at least the supply for Christmas and New Years will be lull up to, if it does not far exceed, the demand.

Roses have not been plentiful, and the indications all point to full holiday figures on all varieties of roses, where the quality is sufficiently good. Many of those that are coming in at present show that softness of texture which tells the story all too plainly of their having been kept stored away as long as they would stand it. Meteors are coming in quite abundantly, and of good quality. This rose will probably be in as good supply as any variety in the market for the holidays. American Beauties sell well, and the best specimens have been bringing \$10 per dozen, with prospects of a considerable rise in a few days.

Of carnations there is a fair crop for present demands, and with prospects of an abundant supply for the holidays. There is considerable said about crops being off just now, and there are many predictions of a short production for the holidays, but unless the weather should be very severe until then it will undoubtedly be found that there will be flowers enough for all. The talk of short cut does not have the effect which it had a few years ago, and the general impression among those in a good position to judge is that there will be plenty of everything to go around. The dealers report plenty of queries about prices from out of town, but shipping orders do not seem to materialize as yet.

It is encouraging to know that the daily papers have considerable to say about the re-introduction of corsage bouquets and hand bouquets in fashionable circles. How much truth there may be in these accounts remains to be seen, but if the correspondents of the metropolitan journals are to be believed hand bouquets are destined to form a large factor in the florists' trade during the fashionable season now approaching. We have been admonished through the columns of all the daily papers that hereafter the acceptable title for a gentleman's floral adornment is to be "coat flower" instead of "boutonniere," this latter word having been disqualified in fashionable circles. Retail florists who are supposed

"to know it all" will please take warning.

Messrs. Eugene Dailedouze and C. H. Allen have just returned from a trip to Boston and are very enthusiastic over the prospects for the convention of the Carnation Society, which is to be held there next February. They predict that the exhibition to be held in connection with this convention will be the finest thing of the kind ever seen in this country, and it is expected that there will be a large attendance from New York City.

There was a big smashup at the New York end of the Brooklyn Bridge one day recently, when a wagon load of flowers and plants intended for Siebrecht & Wadley, and driven by John Meikley, came in contact with an express wagon, the result being an almost total destruction of the contents and the very serious injury to both drivers. Mr. Meikley received a lacerated wound of the scalp and a fracture of the ankle.

Mrs. Henry Siebrecht Jr., whose untimely death was recorded in our last issue, was buried from the residence of her parents at Plainfield, N. J., on Thursday, December 13, the interment being in the family vault at Hillside Cemetery. There were a great many floral tributes beautifully arranged.

Later reports up to noon of Thursday show a tremendous overstock of flowers in market owing in part to bright sunny weather prevailing for past few days. Business is at a standstill and good roses can be bought as low as \$30 per thousand to-day (December 20). The glut of violets is unprecedented; \$5 to \$7.50 per thousand is outside price on them, and all other stock is in a proportionately bad condition.

Boston.

There is a decided scarcity of roses of the better grades, and prices have stiffened up sharply during the past few days. There is a call for everything that comes into the market daily, with the exception possibly of violets, of which there is a full supply.

Of larger roses there are but few. George Wilson is in with Magna Charta in good quality, and the blooms, of which he gets eight or ten dozen a day, sell at sight for \$6 a dozen. For American Beauties Peter Ball is the only resource of any extent, and he is sold out long before you get to him. Many of the retailers have been getting their Beauties from New York, but even that market is short at present on the quality of goods wanted, and there is consequently hunger abroad in the land. Mergets are losing ground fast. Mr. Montgomery is authority for the statement that a short stemmed Bridesmaid will bring a better price in this market than a long stemmed Mermet, and this about states the case. Bridesmaid and Bride of superior quality are worth \$2 per dozen now a week before Christmas and will no doubt bring \$3 at that time.

Carnations are holding on well. Nicholson, Daybreak and Scott bring \$3 per hundred and Buttercup, of which John D. Twombly is the most successful grower, sells for \$5 and \$6, with advance holiday contracts at \$8.

The carnation men were glad to greet Mr. Dailedouze and Mr. Allen as the representatives of the American Carnation Society on their visit to Boston last week, and there is not the least doubt that the meeting of that organization in Boston next February will have the enthusiastic support of the local growers of the divine flower.

One of the growers here of whom we hear but little because most of his goods are disposed of at retail to local customers is W. A. Bock of North Cambridge. Nicholson and Scott are particularly fine at Mr. Bock's, also Helen Keller and Grace Wilder, although the latter at its best cuts a poor figure alongside the Scott. Palms, azaleas and lilies are all looking well here. Mr. Bock's place was visited by the Carnation Society representatives, and they received a most cordial welcome.

The wholesalers are pressed to their utmost to keep up with the demand for holly. Mistletoe is selling rather slowly as usual.

Sprays of Daphne odora with stems two feet in length were exhibited at Horticultural Hall last Saturday by George McWilliam.

Philadelphia.

The wretched weather of the early part of the week interfered considerably with transient trade, but there seemed to be enough demand to use up nearly all the stock at good prices. All roses sell well with the exception of Brides and Perles, which seem to lag a little, probably because every grower has a few and some a good many of these useful varieties. Mme. Testout is becoming quite a favorite with customers and if that weak stem could only be remedied it would move up into the first class. A new rose is making its appearance; it resembles the Meteor and costs the same, but it doesn't sell. Nearly every fifty or one hundred Meteors contains from one to two dozen "bullheads" which appear fairly good in bud but which never develop. Growing and handling cut flowers is a precarious business; the dealer may not sell all his stock but he does not ask the grower to help him bear his loss, and the grower should not attempt to saddle his poor and imperfect stock on the dealer along with his good and charged up at the same price. Every hundred flowers that are charged should be salable; this will apply to violets, carnations, and other similar flowers that are sold by the bunch of so many of a kind.

Swainsona seems to be in demand and sells well; one grower is asking \$10 per hundred sprays. We should imagine it would pay handsomely at these figures. The palm men all report a rushing business. Some say they have never had a better season. Ferns are scarce, that is good ones; there is quite an assortment of varieties, but the hardy house varieties are now small and it takes quite a number to make a fern dish look respectable. The usual instructions on leaving the fernery to be filled are: "Don't put any maidenhair in it. I want hardy plants that I can't kill," and very often it has to be sent for and repaired after a few days' trial at the florist's expense in order to keep peace with his customer.

George Anderson has erected an office and cellar beneath, in which are to be kept his daily cut of flowers; this addition to his storage capacity was completed about two weeks ago, just in time for the holiday season.

The December meeting of the Penna. Horticultural Society was held in the Drawing Room, 12th street below Chestnut. From all points of view it was a great advance on any previous monthly gathering of the society for a very long time.

There was an exhibition of choice new carnations and roses, among them being vases of fine flowers from Mr. J. N. May of Lena Saling, Dean Hole and Maud Dean. From the Cottage Gardens were

Meteor, Bridesmaid, and Mme. Albertini. I. N. Passmore of Oxford sent Yellow Jacket and some fine seedlings. W. R. Shelmire of West Grove sent Eldorado, and Princess Bonnie. Myers & Santman exhibited Della Fox, and Edward Swayne of Kennett a large seedling. Mr. May also brought some fine specimens of his new rose Mrs. J. P. Morgan, some of the blossoms being as large as Beauties, also a vase of Mrs. Whitney. Mr. H. A. Siebrecht staged a vase of his new rose Belle Siebrecht. D. T. Connor of Lansdowne had a vase of Bon Silene by way of comparison. The platform was prettily decorated with the plants and cut flowers used by Messrs. Lonsdale and Craig in illustrating their remarks. An area that had been grown in a dwelling for five years was an interesting exhibit and looked fully as well as its greenhouse neighbor.

Mr. Lonsdale in describing flower and their arrangement during the past fifteen years made some very good points and showed conclusively that modern tastes and methods were a great advance over those of the days of the camellia. Camellias, stevia and the poinsettia, with a few other small flowers used to be the florists' stock in trade, and then such arrangements as this were the fashionable creation, and he held up a pyramid bouquet with a calla in the center and a broad paper on the bottom, composed of camellias, sweet alyssum, abutilons and similar flowers. From these he passed by easy stages up to the favorites of to-day and wound up with a short description of the best known orchids. His remarks were very interesting and much appreciated by the audience.

Mr. Craig took up the subject of plants and exhibited them in the following order, giving a short description of each kind and the treatment it should receive in the house: *Rhaphis flabelliformis* and *R. humilis*, *Phoenix rupicola*, *aspidistra*, *Pandanus utilis*, *Kentia Forsteriana* and *Belmoreana*, *Ficus elastica*, *Arca lutescens*, *aracarias* and *dicksonia*. He recommended amateurs to try *Cypripedium insigne* as an orchid they could grow in the house. His description of the various plants and their methods of culture, was very complete and was listened to with marked attention. The occasion was one that will long be remembered by those present.

The following gentlemen were elected to serve for the ensuing year: President, Clarence H. Clark; vice-presidents, Robert Craig, Dr. J. E. Mears, John Burton, C. H. Miller; treasurer, Thos. Cartledge; secretary, D. D. L. Farson. K.

Westerly, R. I.

A range of thirty-one green houses, covering some 50,000 square feet of ground, most of them of modern construction, with extensive steam-heating apparatus, together with frames, sheds, barns and other outbuildings, and here, there and everywhere in a dozen places at once an alert tireless man full of energy and push, yet always kindly and courteous—this is what one finds who visits S. J. Reuter's establishment at Westerly. And this big concern represents the fruits of just fourteen years of steady application and untiring industry, an achievement in which Mr. Reuter's winsome cheery little helpmeet has borne a full share.

The establishment includes a complete equipment of machinery for turning out all the woodwork of a greenhouse, the cypress lumber being brought here in the rough and all the work of fitting and construction being done on the place.

Two 50 horse power steam boilers and two smaller ones supply heat, the flow pipes being overhead and the returns under the benches with a large condensation tank and steam pump for forcing the water back to the boilers and accelerating circulation. Six of the older houses are to be torn down the coming season and replaced by five new ones built on a modified "short slope to the south system," and still further additions are contemplated in the near future.

Westerly with its 8,000 or 10,000 population does not count for much in the consumption of the product of such a large concern. During the summer much of it goes to Watch Hill, the neighboring seaside resort, where Mrs. Reuter manages a retail store, and for the balance of the year, the stock goes to the Providence and Boston wholesale markets, where it has a reputation for high quality.

Carnations are a leading crop here. Many of the houses are devoted exclusively to Daybreak and Tidal Wave, the latter being confined to the side benches, where its dwarf growing habit makes it most available. Rust is very prevalent this year, all varieties with the exception of Wm. Scott being more or less affected by it. The plants while very fine when taken from the field have not done much until now, when having got their fine roots well developed they are beginning to start ahead and will, Mr. Reuter believes, quickly grow out of the rust. A good many McGowans are grown but Silver Spray is considered the best white. Grace Wilder is unsatisfactory and will be discarded after this season. Edna Craig does much better than last year but with Scott doing so grandly, there is not much room for this variety. Thos. Cartledge has "spot" badly; it is the only variety affected with this trouble. A carnation grown quite largely here which is almost unknown among growers, is Col. Wilder, a scarlet and crimson variegated of robust growth and well formed handsome flower. Buttercup and Baron Rothschild look grand; these have been in the house all summer, having been planted out in spring on the bench where they were to remain. Uncle John and The Stuart have proved very unsatisfactory. Mr. Reuter's method of supporting the carnations is wooden stakes between the plants connected by loops of twine which enclose the plants loosely, the stakes being steadied at the top by stout wires running lengthwise of the house.

In roses one of the leading varieties is Perle, which shows no inclination to produce "bullheads" here. Meteor is also very fine. Testout and Augusta Victoria do poorly. One bench of Testout where hot pipes are directly underneath looks much better than the rest, which leads Mr. Reuter to think that the bottom heat is a necessity with this rose. Watteville is one of his favorite varieties especially for summer. He finds that the burning of the edges of the petals of this rose in summer which growers generally complain of is completely obviated by copious syringing several times a day during hot weather and with this treatment no shading whatever is required.

Springfield, Mass.

Christmas trees will be more extensively handled by Springfield florists this year than ever before.

The Hampden County Horticultural Society held its annual meeting last week and elected the following officers: Presi-

dent, E. P. Chapin; vice-presidents, Clark W. Bryan, P. Hale Smith and George S. Lewis; treasurer, George R. Bond; secretary, W. F. Gale; directors, J. D. Cadle of Westfield; E. H. Howland of Holyoke, Rev. W. T. Hutchins of Indian Orchard, Linwood Morgan of Longmeadow, Dexter Snow of Chicopee, A. M. Spangler of Mittineague and John W. Adams, F. Merritt, Alden, Gurdon Bill, F. R. Belden, J. C. Lutz, H. C. Rowley, Edwin Dickinson, J. H. Hendricks, H. C. Hamilton, J. S. Kirkham, A. Millez, C. R. Miller, George Phelps, L. D. Robinson, E. W. Shattuck, C. L. Simmons, James E. Tower and A. P. Wade of Springfield.

Springfield will have at least three flower shows next year, that number having already been arranged by the Hampden County society. Although the number is several short of this year's exhibitions the society plans to have each of the three sufficiently large to fully make up for the decrease. The premium lists will be made considerably larger this year and by so doing the society expects to attract exhibitors from a distance. The first show will be held in July and will be devoted principally to sweet pea collections. In September there will be a fruit and general flower exhibit and last but not least will come the chrysanthemum show.

A. N. Pierson of Cromwell, Ct., has been invited to give a talk on roses before the Amateur horticultural society some time in January.

F. J. W.

Washington.

Mr. Wm. W. Edgar and bride of Waverly, Mass., who were trying to do Washington in two days, looked in upon us a few days ago.

The cut flower trade picked up wonderfully the past week, notwithstanding the dull weather which lessened the supply of blooms. The demand far exceeded the supply.

The indications at present point to a good holiday trade. Roses are still very scarce and of a very inferior quality. The demand for blooming plants is on the increase and the florists look for a good trade for that class of plants during the holidays. The sale of decorative plants is still very slow. There are a few calls for aracarias, and plants in 5 and 6 inch pots bring \$3 each. Cyclamens in 6-inch pots are bringing \$1 each; the demand for them last week was fairly good. Azaleas in 6 and 7-inch pots, well set with flowers, are selling very well for \$3 each. Ardisias well filled with fruit are bringing a good price and are in demand. The Otaheite orange is quite the rage and is selling well for from \$2 to \$5 each, according to the number of oranges on the plant.

Mr. Edwin A. Seidewitz of Annapolis, Md., paid us a flying visit last Saturday. He says trade is fairly good in Baltimore.

REYNOLDS.

St. Paul, Minn.

Continued dark, cloudy weather has made the cut short and the quality poor, consequently good flowers are scarce and command good prices. This week, however settled weather prevails and the hearts of the growers rejoice as Christmas flowers will be more plentiful while prices will be fairly high. From present appearances there will not be enough to go round, though the exorbitant prices named in the east will not prevail here.

Christmas greens are quite plentiful. Holly is in good supply though the qual-

ity is hardly up to the average of former years. Lycopodium is rather scarce at present. There was an abundance offered early in the season, but just now when everybody wants it it seems to have flown away. The Society of Minnesota Florists met at the West Hotel, Minneapolis, December 8. A goodly number were in attendance and the evening was most profitably spent. The feature of the evening was a paper by Louis Wilde on ventilation. The speaker handled his subject thoroughly and in a scientific manner.

The society will meet in St. Paul next month. These meetings are proving very beneficial to florists in every way and we are pleased to note the increased interest shown in them. It indicates that Minnesota florists are not to be left behind by other states.

Recent visitors: H. A. Johns, of Sioux City; J. M. Kimberlin & Son, of Santa Clara, Cal.; E. V. Hallock and C. P. Braslan.

Clarine Bros. and Chris Hansen are still cutting some good "mums." While the quality is not extra they will come in very handy for the Christmas trade.

FELIX.

Astilbe Japonica.

The following question is referred to me from "E. D. K.": "When should astilbe be potted for Easter sales, and how long does it require to bloom in a temperature of 50° to 60°?"

Astilbe Japonica is the easiest to force of all our herbaceous roots or bulbs, and if good clumps are procured a failure is seldom heard of. When received in November they should be potted, as soon as time will admit, into 5, 6, 7 or 8-inch pots, as the size of the clump requires. Sometimes they are very dry when unpacked and I always throw them into a tub of water for a few minutes. I have seen some florists leave them in the cases till they potted them in January, but I don't believe in this method. After they are potted put them out of doors and cover with a few inches of leaves or litter. They are the hardest of hardy plants; any amount of freezing will do them no harm. After the rush of New Year's is over bring them into the houses. A temperature of 50° will do finely to start them. Last year Easter was very early (March 25). I brought them in about January 7, and had them almost too early. I would say that in a night temperature of 50° they would take 12 weeks to be in flower; in 60° at night about 9 weeks. Their flowering time can be regulated by the temperature you give them, but it is safe to say bring them in very early in the new year.

Any light soil will do for astilbe. It is water they need and in copious quantities. Florists usually crowd them into pots that will just admit the clump and nothing to spare, and as they make great roots filling the pot, you must never let them get dry. The growers for Covent Garden market stand the pots in long shallow tight boxes and keep liquid manure in the boxes all the time for the last month of their growth. There is no doubt this would produce a very superior plant but the price we get for them (50 to 75 cents for a 6-inch pot) would hardly warrant that.

One more item in their culture. Beware of tobacco smoke. They don't need it or any other antipest, and what is more they won't endure it. I have seen the young leaves on more than one lot of astilbe shrivelled up and ruined simply by fumigating. W. SCOTT.

Electric Light in Greenhouses.

For many years I have hunted snails and other pests of the greenhouse by candle light or by coal oil lamp. Have had the drippings of one and the annoyance of the other light to hinder me in hunting out the "night marauders," and although the electric light was in the neighborhood of my greenhouses it never occurred to me that in the matter of artificial light I could improve on the old ways. But in a lucky moment I resolved to put in all the houses incandescent electric lights. The result has been so thoroughly satisfactory in every way that I must mention it. I have had every house fitted up with these lights and I find that any work, either of cutting flowers for an order in an emergency or hunting for these "night marauders," has ceased to have any terrors for myself or the help. A peculiarity of the electric light is that colors do not change and it is easy to separate yellows from whites or pinks, which was hard to do in the old way. The snails and other pests are more easily detected than by any other light. By having the switches or cut-offs properly arranged there need be no more lights in use than are necessary, reducing the expenses down to the minimum. By having, as I have, a light on flexible wire attached to a rod a light can be attached by means of an adjustable socket to any burner so you can look into any dark corner with perfect safety for leaks in the pipes, for a clogged up flue, or use it for any of the many purposes of a portable light with freedom from danger of fire. There are many reasons of practicable use besides the comfort that it causes me to wonder why I did not think of it before. There must be many of your readers to whom the use of electric light is feasible and to them I would recommend with confidence the best thing I have done yet for my own comfort or for the convenience of those in my employ.

Springfield, Ill. CHAS. E. HAV.

Foreign Notes.

Dracana Godseffiana is a new and distinct species from Lagos, West Africa. It belongs to the same class as *D. interrupta* and *camerooniana*, and is of slender habit, leaves often produced three in a whorl, bright green spotted with white.

Scutellaria formosana is a pretty labiate plant from Formosa, recently introduced. It is closely allied to *S. javanica*, and has bright shining green leaves, paler and often stained with purple beneath. The flowers are violet blue, throat white, tinged with green. It is a stove plant, and makes a very pretty specimen.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By young man, single; well experienced in roses, carnations, mums. Address JAMES HOOK, care Ed. Woerle, 416 Wrlght St., Milwaukee, Wis.

SITUATION WANTED—In a large commercial establishment as 10-man. First-class references. Accustomed to running a large plant. Address C. WALTON, Clifton, Ky.

SITUATION WANTED—By an experienced chrysanthemum grower who understands his business. Good references given. Address MUM GROWER, care American Florist.

SITUATION WANTED—As foreman. Have the very highest testimonials as a grower of roses and cut flowers; am steady, sober and energetic. Address A. C. care Anchorage Rose Co., Anchorage, Ky.

SITUATION WANTED—By a second man, commercial or private place. Well experienced also in landscape gardening. Wages moderate. Best references. F H II, 155 Harrison Ave., Boston, Mass.

SITUATION WANTED—By a single man, 9 years' experience in growing roses and chrysanthemums; steady and sober; capable of taking charge of commercial or wholesale place. M, care Am. Florist.

SITUATION WANTED—By young man; 9 years' experience in growing roses, carnations, mums and general stock, as foreman or first assistant. Address T. H. care Charles Zeplich, Bay View Station, Milwaukee, Wis.

SITUATION WANTED—Florists, wholesale and retail, have you, or can you recommend me to a vacancy for end of Jan., '95; 12 years horticultural experience; energetic; good address; character unimpeachable; English. Address J. care W. Miller, 584 Columbus Ave., New York.

SITUATION WANTED—By well posted and industrious young florist, to grow roses, carnations, mums, bulb stuff and general stock in retail place. West or southwest preferred. Also for strong, handy assistant with 18 months' experience. For particulars address S. E. care American Florist, Chicago.

WANTED—Second-hand pipe, 1 to 3-inch. VENEN GREENHOUSES, Conneaut, Ohio.

WANTED—A first-class rose grower for large commercial greenhouses in suburb of Chicago. A Chicago man preferred. Q, care Am. Florist.

WANTED—PARTNER—Capable young man with \$1,200 to \$1,500 cash. Good opening. Within 150 miles of Chicago. BUSINESS, care Am. Florist.

WANTED—Cut flower arranger to take charge of a cut flower department. Must be a fairly good maker-up, quick and energetic. Write, giving experience, references and wages wanted, and when can commence work, to SAMUEL L. MARSHALL, Penn. Ave. near Sixth St., Pittsburgh, Pa.

FOR SALE CHEAP—Large second-hand florist's box, value about \$75. VAUGHAN'S SEED STORE, 86 State Street, Chicago.

FOR SALE CHEAP—Florist business, \$5000 a year. In Pueblo, Colorado. Best trade in the city. Apply to PUEBLO FLORAL CO., 325 W. 9th St., Pueblo, Colo.

FOR SALE—Dean combined steam boiler and pump. 4-horse power, 1 1/2 inch suction, 1 1/2-inch discharge pipe; good repair. Cost new \$360; price \$150. Write for particulars. C. E. ALLEN, Brattleboro, Vt.

FOR SALE—A well established florist business, on one of the best streets in Philadelphia; fine large store, and greenhouse attached containing 800 feet of glass, well stocked. Address THEO. MILLER, 228 Columbia Ave., Philadelphia.

FOR SALE—Having recently inherited some property in the Old Country which necessitates my going over there, I offer my entire business for sale, consisting of 25,000 to 30,000 square feet of glass, with large house and store, fully stocked with roses, carnations, violets, palms, and general stock, together with a fine catalogue seed trade, spring bedding, fall bulb and cut flower trade. This is a grand opportunity for a party with capital, or to form a stock company, as there is plenty of scope to develop an immense home trade. For further particulars inquire of THOS. T. HOLTON, 84 South St., Morristown, N. J.

MORTGAGE SALE.

By virtue of Chattel mortgage duly recorded I will offer at public auction on Friday, December 28, 1894, or will receive private bids before that date, on all the plants, building, fixtures and leasehold interests of the property 632 to 638 Stony Island Ave., Chicago, lately occupied by the World's Fair Floral Co., including a large number of blooming chrysanthemums, cactus, palms and orange trees, formerly on exhibition at the World's Fair in Jackson Park. This is the best location in the city, and an opportunity for a florist.

M. E. WILLIAMS, Mortgagee.

New York.

Ferdinand B. Wenderoth, for many years with Ed. Jansen, has mysteriously disappeared. He left his home in Brooklyn last Monday morning for his place of business as usual, and an acquaintance accompanied him to the corner of 6th avenue and 23d street, this city, and from that point every trace is missing. All his private affairs, as well as business matters, being apparently in good order no cause for the disappearance can be advanced.

WE ARE advised by Mr. Rieman that the correct spelling of the name of the chrysanthemum named for him is Henry W. Rieman, and not Reimen, as we had it in a recent issue. Also that the variety originated with him and was sold by him to Messrs. Hill & Co.

BULBS FOR EASTER FLOWERS.—"A" will find answers to his questions in Mr. Scott's seasonal hints in our issue of March 1, 1894. The same matters are touched upon in our issues of January 25, 1894, and September 21, 1893.

OBITUARY.

Pierre-Auguste Oger, the well known rosarian, died at Caen, France, October 5, in the 79th year of his age. M. Oger originated a number of varieties, the best known being Mme. Pierre Oger (Bourbon) sent out in 1878. He was actively engaged in horticulture up to his death, and was greatly esteemed by his associates. He leaves a widow and family.

VISITED CHICAGO: S. F. Willard, Guy Posson, B. L. Grant, James Meggat.

A PHILADELPHIA house offers exceedingly low rates on yellow onion sets December 15.

F. BARTELDES & Co. of Lawrence, Kas., seem to be first in the field with 1895 retail seed catalogue. Red Wethersfield onion \$2 a pound, Globe Danvers \$1.75.

Catalogues Received.

Robert Buist, Philadelphia, garden seeds; Beney, Lamaud & Musset, Lyon, France, plant novelties; The Cottage Gardens, Queens, N. Y., carnations, cannas, etc.; W. Atlee Burpee & Co., Philadelphia, preliminary trade list seeds; Louis Paillet, Paris, France, nursery stock; J. M. Thorburn & Co., New York, seeds; Mrs. Anna B. Nickels, Laredo, Texas, cactus; Hugh Low & Co., London, wholesale tradelist plants and orchid trade list.

Chicago.

If the grower don't play in luck this year it isn't the weather clerk's fault. If the weather were made to order just for the occasion it couldn't well be improved upon. Prices have soared away up. All the week, commencing Monday, stock advanced a notch day by day. The commission and wholesale dealers used every effort to draw out a supply sufficient for the most urgent demand, but all in vain; 8 to 10 for roses and 3 for common grade carnations seems no temptation to bring out the stock; contrary to all expectations the prevailing high prices have been no inducement to the growers to part with their stock, in fact it seems to have had just the opposite effect. What the result will be no one can tell. This last week of glorious weather has made a wonderful change in the prospect of supply, and unless we are very much mistaken there will be plenty of carnations and violets at least. The outlook for roses though is not so good. The cut of fresh roses can not possibly be large to judge from appearance, but to what an extent "pickled" stock will influence the market time only will tell. The wholesale dealers had an uphill job to supply their shipping demand. They were unable to fill one-half of the orders, and as a consequence many a country dealer had to be disappointed.

In retail circles the boys report an active demand for holly, green, etc., but few orders for flowers are booked ahead. The price of roses, based on present quotations, is so much higher than last Christmas that many flower buyers seem to be inclined to forego the luxury of flowers. At any rate the majority are holding off the placing of orders until the last moment. The boys are naturally on the bear side of the market. Very few heavy orders are being placed, the majority being rather inclined to take their chances.

Mr. E. H. Libby, formerly of the Rural Publishing Co., New York, is now connected with the *Irrigation Age*, of this city.

Buffalo.

Contrary to reports from some eastern cities Buffalo weather has been phenomenally fine. For the past month we have had mild weather with many days of unclouded skies; this is wonderful for our town and may it continue is the prayer of all connected with horticulture. It may not suit dealers in furs or the livery stable business, but it agrees with our health and temper.

From present indications flowers are going to be away up in price. Roses are already quoted at "prohibitory" prices. It can't be helped; all the talk in the world won't prevent it. There are ten people after one rose, and the highest bidder will get it, while in October there were ten roses for one buyer and the buyer has his choice and then gets the best at his own price. Holly and green are as popular as ever, and at this writing there will be none too much in town. There is as last year a good demand for plants in flower. This part of the trade has been steadily growing and is now certainly an important feature of the business. Poinsettia, azaleas, cyclamens, begonias, Liliun Harrisii, pans of lily of the valley, Roman hyacinths, paper white, as well as many small palms are selling well. Chrysanthemums are, I believe, entirely gone out of this country and no one regrets it very badly. They begin to look like some old broken down tramp to whom you had given the cold shoulder a few weeks ago and who has turned up again.

We were favored this afternoon with a pleasant call from Mr. Henry Wise of East Aurora. Another visitor in town this week was Mr. Elder of the Lord & Burnham Co., and Mr. D. Scott of Fredonia, and now as it is a busy time I must conclude and wish everybody in the business, especially those who have had the courage to read the effusions of W. S., a happy and prosperous Christmas.

W. S.

Cincinnati.

Business has been very dull here the past summer, but the outlook for the winter season is somewhat more encouraging. Flowers are getting more plentiful and the quality is good, especially in roses and carnations. The weather has been splendid and the plants are doing finely.

Mr. Jackson, one of our best violet growers, has had poor success this fall with violets, having lost nearly three houses from the disease. This seems to be the complaint of all the florists.

A great deal of new glass has been added this past summer, and the supply seems to have increased at a more rapid rate than the demand.

Several new stores have opened this fall. Mr. Frank Huntsman opened a neat little store on Race and 6th, and is doing a good business. Mr. Ebrgott, formerly with the Cincinnati Floral Co., opened up in Hardesty's old stand on 4th street, and has had a good deal of work on hand.

Chrysanthemums are about gone, and those who have any left can now get a good price for them. The demand for violets for corsage wear this season amounts to almost a craze, and they are very scarce, selling at \$2 per 100. Harrisii and calla lilies will be in fair supply for Xmas.

Mr. John Fries has taken his son into partnership. They have just completed two new 100-foot houses, and have them filled mostly with Daybreak carnations.

Stock is scarce, and it is suspected that the growers are holding it back for

Christmas. Carnations are bringing from 3 to 4, Perles 4 to 6, Brides 6 to 8. Beauties are very scarce and sell readily at \$5 to \$8 a dozen wholesale. P.

St. Louis.

The regular meeting of the Florists' Club was held on the 13th with a fair attendance. The final report of the exhibition committee was made and accepted. The prizes are being paid in line with their recommendations. The subject of a show next season was broached and called forth considerable discussion. There is a party in town who wishes to manage the show, guaranteeing the prizes and taking whatever profits may develop. His business is managing exhibitions and entertainments, so that he thinks there is something in a show properly conducted. A committee consisting of Mr. A. Waldbart, John Young and R. F. Tesson have been appointed to wait upon him and report to the club at the next meeting what terms and arrangements can be made with him. The prospects are that if anything in reason will suit him the show will be held.

Trade still continues good, stock being scarce. Christmas prices so far quoted are high, but the prevailing shortness in the supply renders them imperative.

R. F. T.

Pittsfield, Mass.

A meeting of the Berkshire County Gardeners' and Florists' Club was held December 13. The annual election of officers took place, and the following were elected: President, Col. W. Cutting; first vice-president, A. P. Meredith; second vice-president, Edward Dolby; secretary, R. C. Pye; treasurer, Frank Howard; auditor, Robert Johnson; guard, J. G. MacArthur; executive committee—Col. W. Cutting, E. Bennet, R. Johnson, E. Warden, M. Finaghty, T. T. Connors, N. L. Cobhan.

R. C. P.

Germinating Clematis Seeds.

In answer to "Constant Reader," page 427, clematis seeds germinate very slowly. If sown now in boxes and put under the bench of a greenhouse till spring they will come up quite thickly. Or if you have no greenhouses put the boxes outside and cover up with a little litter. Freezing will do no harm—rather do good.

A. GILCHRIST.

. . . F. A. BALLER, Bloomington, Ill.

Worcester, Mass.

A new factor has come into the florist business in this quiet little town that is causing more or less uneasiness, that is the addition of a plant and flower department by a large dry goods concern that handles nearly everything. This firm has had periodical fits of selling plants and flowers, generally of inferior quality, at so-called bargain prices and about the first of December they announced with a grand flourish that plants and cut flowers had been added to their stock in trade and advertised ten thousand Mermets, Brides, Bridesmaid, Cusin, Meteors, etc., at 48 cents a dozen, which was really a high price for the stuff, the next day they were cut down to 39 cents, and later three hundred small palms were advertised at one-half regular prices but in reality were sold at from two to eight cents lower than usual prices. The first of December Chas. D. Thayer gave up his Main street store and announced that his cut flower business had been removed to this dry goods concern, but he was still in the field for funeral work and decorations. Of course all this has created quite a little tempest in a tea-pot among the small retailers as they seem to forget that no one can fool all the people all the time, and that while some trade will undoubtedly be attracted by booming advertisements while the thing is new, fresh flowers and fair prices will win after the novelty of buying roses for 39 cents per dozen has been worn off by the faded appearance of the stuff the next day.

A. H. L.

Toronto.

Since writing last week a little improvement in business generally may be noticed. Stores are all decorated up for Christmas and the public is beginning to show the preparatory symptoms of the Christmas fever.

On Tuesday (18th) the Gardeners' and Florists' Association will choose its officers for the coming year and the excitement appears to be running high; there are rumors that great changes will be made. We shall see. I am not going to give away what any little birds may have told me this year.

There is likely to be any amount of cut flowers for the Christmas trade with perhaps the exception of violets which are selling now at \$2; \$2 to \$3 is the present price of carnations with a plentiful supply; roses are still "way down" but with signs of improvement. Chrysanthemums will be still with us at Christmas and in considerable quantity too.

E.

Getting Rid of Moles.

In reference to the inquiry about moles would say that three years ago our garden was overrun by them. We finally tried a remedy mentioned in a English gardening book, which was to plant castor oil beans all over the garden. It was stated that when the moles came in contact with these they would leave the place. We tried it and have not seen any sign of moles since. We start the beans in a box in the greenhouse and plant out in spring. We tried oil and also tar, but that did not drive them away.

New Notes.

NEW BEDFORD, MASS.—H. V. Sowles has opened a new florist's store at 632 Purchase street.

BELFAST, ME.—W. E. Hamilton has fitted up a very fine establishment in Pierce's Block on High street.

MILLBROOK, N. Y.—Lester & Smith have dissolved partnership. The business will be continued by H. J. Smith.

LAKE CITY, MINN.—The annual winter meeting of the Minnesota State Hort. Society will be held here January 8 to 11.

GALT, ONT.—The wife of Mr. Alex Common, the florist, died October 15, aged 44 years. She had been in delicate health for some time.

LANSING, MICH.—Henry F. Dew has sold his greenhouses and stock to J. Besinger. Mr. Dew has removed to Albion, Mich., where he will start a new business.

KENTON, O.—W. Sabransky, for the last three years foreman for A. R. Aldrich, Springfield, Ohio, has rented the place of Jas. W. Lang in this place. He took possession October 1.

PEORIA, ILL.—Steps are being taken to secure legislative action that will permit the park board to issue bonds, from the proceeds of which the three parks will be considerably improved.

ABILENE, KANS.—The annual chrysanthemum show by Mrs. S. M. Bagley, the florist, was very attractive. The plants and flowers were excellent in view of the fearfully hot dry summer in this section.

TALLAPOOSA, GA.—Henry W. Ash, prominent in Iowa horticulture, died at the residence of his sister in this city December 14. He had come south for the benefit of his health, which had been failing.

ATHENIA, N. J.—On November 30 at 3 a. m. fire destroyed 1500 feet of glass, about one half of the establishment of Geo. W. Vreeland. The fire is supposed to have been of incendiary origin. The remaining glass will now be devoted to spring bedding plants.

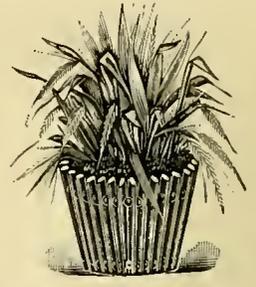

DES MOINES, IA.—The election of officers for 1895 at the annual meeting of the Iowa State Hort. Society resulted in the selection of the following: M. E. Hinkley, Marcus, president; J. M. Elder, Concord, vice-president; J. L. Budd, Ames, secretary; W. M. Bomberger, Harlan, treasurer.

DIXON, ILL.—At the meeting of the Illinois State Hort. Society the election of officers for 1895 resulted as follows: T. A. Goodrich, Cobden, president; J. L. Hartwell, Dixon, vice-president; H. M. Dunlap, Savoy, secretary, and Arthur Bryant, Princeton, treasurer. The next meeting will be in Kankakee.

HAVERHILL, MASS.—F. W. Poore has finished a new house 19x100. Fred Luce has made a large addition to his buildings, including a seed and florist store. C. H. Kaulbach has put in a 40-horse power steam boiler and placed all his hot water boilers in one cellar instead of at the end of each house. The city has built a conservatory 18x60 for storage of city plants and propagating; it is the intention to erect another house 20x60 in the spring.

Vaughan's Seed Store, Box 688, Chicago.

New London, Conn.

It is always a source of pleasure to look through a well kept establishment where on every side is stamped the unmistakable imprint of the true gardener, whose love of his plants for their own sake has not been diminished nor his ardor quenched by the cares and distractions incident to the struggle for financial success. Such an establishment is that of John Spalding. Its owner is a representative of the highest type of gardener, a "young old man" who carries his four score and odd years with the easy swing of middle age, a man of sunny disposition and kindly heart, to whom it is a delight to listen as he tells of gardening life in the far away days, of his father, "the grand old gardener of Woodside," and the incidents, instructive, amusing or pathetic, of his own early apprenticeship days in old Scotland.

Everything in Mr. Spalding's houses is well grown and in as good shape as can be expected where every plant has to pay more or less tribute to the demands of an extensive retail business. There was a fine display of chrysanthemums in their season of which Mr. S. says that "if not very profitable otherwise they brought the people here," and the houses occupied by them are now filled with azaleas. Lizzie McGowan is with him the most profitable carnation and the appearance of the plants bears out this assertion. Here we see two almost forgotten old acquaintances among the roses, Marechal Neil which Mr. Spalding terms "a grand old friend to a country florist," and Her Majesty, which he says he has devoted to the only use he can find for her, i. e., as a stock on which to graft the various popular commercial varieties.

Other relics of the past are some very large and vigorous camellias which are still retained, doubtless, for the reason mainly that their owner hates to part from them. A house of Harrisii lilies here is the finest the writer has had the pleasure of seeing this season.

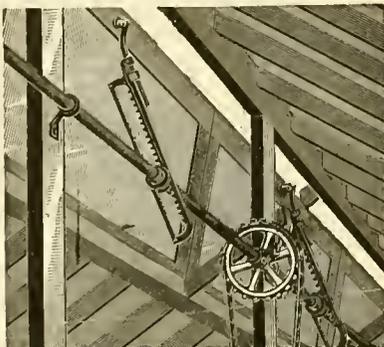

PLEASE mention the AMERICAN FLORIST every time you write to an advertisers.

SEE HERE

BROTHER

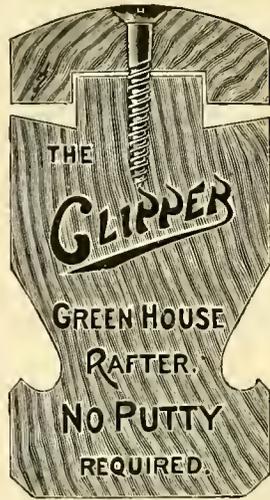

FLORIST!

Aren't you tired going through your houses two or three times a day year after year and lifting your ventilating sash one at a time and propping them up with sticks or pots, with a chance of having sash blown off and broken glass to pay for? If you are

We have got just the thing you need, the NEWEST and BEST thing out. "The New Departure" for about half the cost of the old style. Send for Descriptive Catalogue to

What Growers Say!
A Different Letter Every Week

CRESTON, O., June 7, '94.
Gentlemen:—The Cypress lumber for our greenhouse was received in good condition, and its fine quality and perfect workmanship have won the admiration of all who saw it. Nothing like it had ever been seen in this locality.
The Clipper bar has attracted special attention. The idea of a glass roof 24x100 feet without puity or tacks is new to most of our people, and is a success.
Yours respectfully,
JOHNSON & JORDAN.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.
Send for price list and samples and we know you will give us an order.

The Arrangement of Flowers.

XV.

TABLE DECORATIONS.

The table decorations illustrated in this issue comprise the ten entries at the recent Chicago exhibition. It is to be much regretted that better photographs could not be secured, but this proved impossible owing to the strong contrast between the dazzling white of the linen and the dark foliage under the electric light. However, to the professional eye the main points will be clear. Our aim here is to consider the matter of table decorations from the commercial as well as the artistic standpoint.

The vital point in dinner table decorations—the arranging of material in such a way as not to obstruct the view—is so well understood by the majority of florists with experience that it seems superfluous to again mention it. The new beginner, however, is very apt to violate this first principle, and to them let us emphasize this general rule once more: "If the decoration is intended to come below the vision don't exceed a height of 15 inches; if above, or a combination of the two, such as is shown in the third prize table, the line of the upper arrangement should stand not less than 24 inches above the level of the table. As to the first point as above mentioned no adverse criticism can be passed on any one of the decorations illustrated since all of them are kept within proper bounds.

But let us advance to the second rule, "don't overcrowd," and then we find that some of the oldest and most experienced hands at times make the gravest error. We find this exemplified in two or three of the arrangements under consideration. The fault is generally shifted onto the caterer for setting too small a table. How often do we hear the remark: "If the table was only a couple of feet larger the decoration would just fit it." Yes, very true, but the table is not supposed to be set to suit our design, on the contrary our design must suit the size and shape of such a table as is provided, so that is the first thing for the decorator to ascertain, and there is positively no excuse on this score that the experienced florist can offer. The greatest danger in overcrowding is generally experienced with a long narrow table. Often such a table is only 4 feet wide, a width so narrow that a regular centerpiece is out of place since the space at our disposal is only about 12 inches, allowing a space of 18 inches from the edge of the table for the service. For such a table the most suitable decoration would probably be an arrangement of loose cut flowers placed in cut glass bowls, one for the cen-

ter filled to be the most prominent, and one at either end. A few blossoms and ferns might be added, being arranged between the bowls, or you might place a bowl of flowers in the center and a pair of fern dishes at the ends with good effect.

Now let us analyze some of our illustrations, the first being the one awarded first premium. This is a round table 9 feet in diameter, the ideal size of a table to seat from 12 to 14 persons in comfort, and also the size and shape par excellence for arranging an effective decoration. Of course such a table might be overdone but there is little danger of crowding on to the service line. The centerpiece in this decoration consists of an arrangement of adiantum and Cypripedium insigne in the shape of a three-leaved clover, the loose arrangement of the material giving it a round effect, slightly depressed on three sides. The wire frame used for the purpose was 12 inches in diameter lined with tinfoil on both sides, in the center of this was placed a fine plant of Adiantum gracillimum tipped out of its pot, the height of which when in position being about 15 inches with 24 inches spread. Around the ball of the plant sphagnum was closely packed with a layer of live green moss on top, this being tied in firmly. The cypripediums were fastened onto short match sticks in the usual way and arranged around the fern in three irregular clumps, with an edging of Selaginella dentata. This arrangement was placed on a circular mirror 36 inches in diameter, the edge of this being encircled with a wreath of selaginella wound on a wire hoop. This selaginella, in our market at least, can not be bought except as growing plants and therefore is more expensive than the cut fronds of adiantum, which latter might be used also with good effect. But there is no comparison in the keeping qualities of the two, the fern as we know wilting in a few hours while the selaginella will last in perfect shape for days, even in a warm room and out of water, and is therefore far superior. Around the center arrangement, which takes up a space of 38 inches in diameter when complete, were placed 6 little cocos about 9 to 10 inches high; these were tipped out of their pots, the balls of the plants being wrapped in green moss and then covered with selaginella arranged to give the appearance of growing around the base of the cocos. Two cypripediums and a piece of selaginella in front of each plate completed the arrangement. It must have been apparent to all observers that in this arrangement, which applies also to other designs, in orchids particularly, the growing plants were of immense advantage over the cut material and it adds character and naturalness to a design hard to obtain in any other way; but most important of all, such a decoration will last three or four days. The expense is not so very great either: 1

adiantum \$1.50, 50 cypripediums \$12.50, selaginella \$3.50, 6 cocos \$2, loan of mirror, etc., \$2, total \$21.50. The retail figure, at a handsome profit, would therefore be say \$45.

The second prize table, the next in order, is a very simple arrangement of cattleyas. The flowers in the centerpiece (about 2 dozen *C. labiata*) were arranged in a cut glass bowl with *A. Farleyense*. The effect was good but there was lacking that light and airy appearance so essential in an orchid arrangement. *Farleyense* is undoubtedly one of the most beautiful of ferns but is rather too heavy and massive for good effect when placed between the flowers. For a border, or laid loosely on the table, this fern shows up to the best advantage. The balance of the decoration consisted of four small slender stem cut glass vases each holding one cattleya and a piece of *Farleyense*, a few fronds of this fern being laid about the table. Cost: 30 cattleyas \$15, *A. Farleyense* \$5, incidental expenses \$1, loan of vases \$1, total \$22. Double your cost and you have \$44 as your legitimate retail price.

A table decoration of cattleyas need not necessarily be a very expensive one. Suppose you arrange a centerpiece of growing ferns, something at a cost of say \$5. One dozen cattleyas placed in four low dishes (cut glass is the best), 3 flowers in each with a few fern fronds. Set these (your table being circular) 8 to 12 inches (according to the size of the fern arrangement) inside of the centerpiece, and you have a pretty table at a cost of about \$12.

The next table (third prize award) is like the foregoing, a circular shaped one with an arrangement of yellow chrysanthemums. In the center stands a tall slender twisted glass vase which holds about 2 dozen "mums" arranged with *Adiantum* princeps. Around this vase is placed a wreath four feet in diameter of the same material. This decoration was quite effective, but as necessarily the flowers in the wreath had to be used with short stems, this part of the arrangement looked rather too massive. A single bloom of the same flower was placed beside each plate. Taken all in all the arrangement as a whole was probably as well done as could be expected to result from the employment of such large and heavy forms in "mums" as are mainly grown for the market nowadays. It is next to impossible to do artistic work with such material. Looking at the "mum" question from the decorator's standpoint what an improvement in this line might be effected with certain types despised at the present day, which for graceful effect in arrangements outclass all the modern varieties. We may figure the cost of this table as follows: About 100 chrysanthemums \$15, *Adiantum* \$2, wire frame, etc. \$1, total \$18. Retail price say \$35. A very good decoration, however, can be put up of the same class of material by reducing the quantity to suit the price, at any figure from \$10 upward.

No. 4 is an oblong table with an arrangement of Bridesmaids in the shape of an oblong hollow square, a candelabra being placed in the center. As is shown plainly in the picture the design is too wide in proportion to the width of the table (which is about 4 feet). With a diameter of about 2 feet the arrangement leaves only a space of one foot for the service, which on the whole produces an overloaded effect notwithstanding the fact that the arrangement of the material was loose and graceful. One vase with foliage is placed in front of each plate. Cost: 200 roses \$10, *Adiantum* \$1, wire

design, moss, etc. \$1, total \$12. With the material at the price quoted such a table can therefore be reproduced at a good profit for \$24.

No. 5 is a square table. The size (6x6) is rather too small for 12 covers in the first place; certainly the mound of flowers placed in the center, fully 3½ feet in diameter, is by far too large and massive for such a table. About 40 *Cypripedium* insigne and 300 lily of the valley were used in this arrangement, placed in a square plateau. The cypripediums with *Adiantum Farleyense* forming the center, the valley filling the outer edge, about a foot in width, the effect being very heavy. Two cypripediums for the ladies and a boutonniere of one-half dozen valley for the gentlemen being placed beside the plants. The cost would probably stand something like this: say 50 cypripediums at 25c. \$12.50, 300 valley \$12, *A. Farleyense* \$3, wire frame, etc. \$1, total \$28.50. Retail price \$58 to \$60. But for a table of this kind one-half of this material would be quite sufficient, which amount would give a much better result.

No. 6 shows another round table, a very neat affair in pink and white. The centerpiece is formed of *Testout* roses placed in a fair sized cut glass bowl, *Adiantum* being added for green. This arrangement of roses was placed on a mat formed of white chrysanthemums with a border of *Adiantum* cuneatum. In our own judgment if the "mums" had been left out and only the ferns used, or perhaps a fringe of valley, the effect would have been heightened; at any rate the large white chrysanthemum for the gentlemen's boutonniere was not in keeping with the ensemble. Aside from this little defect the effect of the arrangement as a whole was pleasing. The color effect, a perfect union of flowers and table ware (also in pink), was really fine. Altogether such a simple decoration can be highly commended. In point of expense it comes within the reach of people with simple tastes and moderate means. Let us say 75 roses for the bowl and two each for six ladies and one each for the same number of gentlemen, that makes 93, say 100, \$5, 100 *Adiantum* \$1, loan of bowl \$1, if we figure in the chrysanthemums this would add \$2 more; if we use say 50 valley instead or Roman hyacinths the cost would practically be the same, the total reaching \$9 to \$10 (don't confound this with Christmas prices). Handsome retail price \$20.

In No. 7 we have a violet table. In shape it is round, like the preceding one. The center design is in shape something like a wheel without the tires. The frame (wire) being mossed in the usual way is filled with the violets, these being fastened on picks and arranged at the height of an ordinary wreath. The center, which we might call the hub, contains a clump of valley. Bunches of about 50 flowers tied with a narrow purple ribbon were used as favors. Violets used in a set design of this kind lose their individuality and the more elaborate the more disappointing such an arrangement is apt to be. In mid-winter such a decoration is rather an expensive affair and it isn't very often we are called upon to furnish the like. The number of flowers required depends somewhat on the size of the blooms; 1,500 of the largest flowers would probably be enough, while if the blooms be small it would take a thousand more; even at the low figure of \$1 per 100 the lowest estimate would bring the cost price to something like \$25 to \$30. Our own idea of a table decoration with violets is radically different from the one

under consideration. As for instance, take for the central figure (for round table) a dish filled with growing ferns and then scatter your violets just as liberally as your price allows all over the table cloth among the dishes. Or a combination of growing ferns and pots of violets in bloom plunged in a bed of green moss would make a fine centerpiece. If violets in pots are not to be had clumps of the cut blooms might be arranged with plenty of their foliage to resemble growing plants. But these are suggestions which we intend to illustrate more fully in the future, as well as the various combinations of violets with valley, Romans, etc.

No. 8 shows a design in *La France* roses. A plant of *Adiantum Farleyense* forms the center, the roses being arranged in combinations of crescent wreaths or more properly speaking garlands. These are tied together with streamers of pink ribbon, the arrangement as a whole lacking somewhat in grace. A judicious use of *Adiantum* fronds would greatly add in this respect. The *Farleyense* too in the center instead of giving a relief rather added to the stiff effect. *A. gracillimum* or *cuneatum* would be more graceful. *La France* roses are very effective for a table decoration but these and other roses of the larger type when arranged in low forms like the present where the stems are cut to a length of 3 inches, wired onto picks and treated like a wreath in set form are rather difficult to arrange in graceful style without a liberal use of some airy forms of foliage. As to the cost this design probably represents 300 roses, the cost of which at \$5 would be \$15, a good plant of *Farleyense* would cost say \$5, ribbons \$3, wire frames, etc. \$1.50, total \$24.50. It would therefore follow that the selling price would not be much short of \$50. For one-half the price, however, such a decoration might be furnished by substituting *A. gracillimum* for *Farleyense*, leaving off the ribbon and using one-third less in quantity of flowers.

No. 9 is an oblong table with a large oval center plateau of *Perle* roses and *mignonette*, in the center of which is placed a small glass vase which holds about one-half dozen long stemmed roses. For favors a half dozen roses are used, around the stems of which is folded a Japanese paper in imitation of a lace handkerchief, to which a small knot of violets is tied. A neat decoration of this material could be made at a first cost not to exceed \$10, the one in question probably figuring up considerably more (we are always speaking with a view to November prices): Say 100 first quality *Perles* \$3.50, 100 *mignonette* \$3, 50 roses for favors \$1.75, ferns, etc. \$1.75, total \$10. The arrangement of the same material might be varied. For instance, form an oval plateau of the 100 roses for the center, arrange two clumps of 50 each of *mignonette* and place at either end.

No. 10, the last of the series, is an arrangement of lily of the valley as the main feature. The table being round a circular shaped mirror is placed in the center, around the edge of which is arranged a wreath of *A. Farleyense* and *cuneatum*. Five low glass vases, each holding about 75 blooms and foliage, are loosely arranged, one being placed on the center of the mirror and the other four at equal distance apart around the table; four sprays of *Testout* roses, each containing 6 to 8 roses, are arranged between the vases of valley. Let us figure the cost at say 350 valley \$14, *A. Farleyense* \$3, other ferns \$1, use of mirror \$1, incidental

expense \$1, total \$19. Retail price \$38 to \$40.

Carnation Notes.

It is well at this time to investigate failures in some of our crops, for I question if there is one grower who can go through his place and say, all is well. Why has this lot proven unproductive? Why has this bench failed to come in for the holidays? Can you tell the cause of failure? If so, then are you fortunate; you will not be apt to make the same error again unless it is just as in the past, a lack of attention to detail. Perhaps you planted in this bench when the soil was too dry or that one when too wet; now these are not mistakes but gross carelessness and the best of growers take chances that are fatal and they knew better at the time of planting. Great is their sorrow now, for the crop is not what it would have been had they not been in so much of a hurry to get that bench filled and so we start into the new year with the determination to guard against all the errors of the past year and that great help to all mankind, hope, comes to our rescue and assures us that mistakes are of the past; we will make no more. "Just wait until next year and I will have a better assortment than now," or "I will have them all in for Christmas," is the remark we hear from so many. Better say nothing, for you may be in the same box again.

Then, too, some of us fail in growing carnations and without seeking the cause and sticking we go into something else which we understand as little as the carnation and lose again. I tell you there is no such thing as stick, only be sure what you are sticking to and why. Then again we are impatient and expect a variety which we know is a late bloomer to produce bloom from early until late, and force it along knowing all the time that good flowers will not come until February or March, and when the few that do come are shrivelled and poor, out they go and nothing to take their place, when if we had waited we would have been well repaid. This is a mistake, not so much the expecting a large crop early, but the planting of a late sort at all. Give them up; there are plenty of early sorts, why use late? Remember this in stocking up for next year.

I was surprised to find that in Boston Mrs. Fisher leads in whites. This is because Lizzie McGowan is not understood by the growers; it does not grow as strong in the field as the former and is therefore condemned. In several places where Mrs. Fisher was grown largely McGowan had but small space devoted to it, but upon these few plants were flowers in my estimation much superior to the average Fisher. If the Boston growers would propagate McGowan a little earlier and get larger plants I think (mind, I do not assert) they would discard Fisher. Although McGowan comes star-shaped under certain conditions it is to-day the best white for general cultivation. I merely mention this because it is an error that many make in discarding varieties because they fail the first year

of trying. True, there are failures the causes of which none of us can solve, but there are certain rules to follow which if closely adhered to will lead to an abundant crop and success. This point is plainly demonstrated from the fact that a grower at Flatbush who never grew a carnation until this year has now the finest houses of McGowan and Scott that I have ever seen, and not only this, but they are the finest and best grown plants of any sort which I have ever seen, and this grower, Mr. Suydam, has followed closely the instructions of his neighbors, the Dailledouze boys. Mr. S. has patience and a vast amount of common sense, an admirable soil and uses lots of manure. Some will say it is a greenhorn's luck, but if this were the case why should his violets and mignonette be in the same splendid condition?

CHARLES H. ALLEN.

A Carnation Puzzle.

The Heite Floral Co. have two places, one in Merriam, Kans., and one in Kansas City, Mo. At Merriam, Kans., two houses are planted to carnations, one house running east and west, the other north and south, and both are in terrible shape with the rust. Mr. Heite states that all the remedies advocated in the FLORIST have been tried, but with no good results. At their place in Kansas City, Mo., two houses are planted, one entirely to carnations, one to carnations and roses, houses running each way, are in the most perfect health, in fact could not be in any better condition; stock all grown at their place in Merriam, Kans.

Mr. Heite desires very much to know the reason why they do so well with him in Missouri and so poorly with his son in Kansas. Surely it can not be prohibition!

S. M.

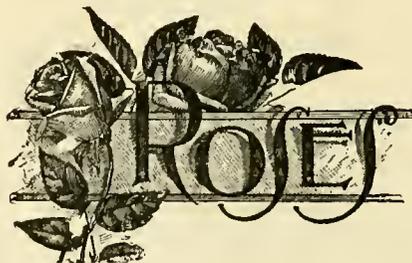

Chester County Carnation Society.

The above named society will hold its monthly and annual meeting January 5, at Kennett Square, Pa., and all introducers of seedlings might do well to exhibit. I will gladly display any flowers that are sent to me. EDW. SWAYNE.

Kennett Square, Pa.

Carnation Profits.

Will some of the carnation specialists give me an idea as to what should be the net profits from a house 14x150 filled with standard varieties grown under ordinary circumstances? W. W.

Cut Worms in Rose Houses.

A worm that has given me considerable trouble this fall in my rose houses is a greyish brown in color and from half an inch to 1½ inches in length. It does all its destructive work at night, coming out about 10 p. m. and hiding in the soil by morning. It climbs the plants, cutting off every leaf as it goes, and eats the bark from the young shoots, finally reaching the bud, where it borers a round hole into

the bud and feeds on the unfolded petals. During the months of September and October it very nearly stripped one house 20x75 feet of leaves, young wood and buds, then seemed to disappear for about three weeks, when we found another crop. We used lime water and tobacco with tolerable effect, but have not been able to entirely rid the houses of it. Can you advise me what to do? I. M. L. Pueblo, Colo.

From the description given I think it must be one of the cut worm family. There are several varieties of this nocturnal marauder (Agrotis family) and they are very troublesome in some sections. The best remedy found so far for exterminating them is to hunt for them in the evening after they have begun their night promenading, for this species prefer "darkness to light because their deeds are always evil." Furthermore they are gourmands of a very pronounced character, as they can eat enough at one meal to allow them to remain inactive for twenty or twenty-four hours after, and they are very wary critters to catch also, as they take care to cover up their places of retreat under some loose soil or similar material. Next to the "ketch 'em and kill 'em" remedy soot sprinkled thinly over the wholesurface of the bed or bench and washed in with the waterings is the best, as the strong pungent flavor of the soot water seems to disturb their repose, and I have seen them crawl out of their hiding place to die on the surface after its application.

If your correspondent will watch carefully just as it is getting dark he will see a dark brown moth around in the greenhouses, and if there happens to be any boards lying loosely together in the house these moths will be hiding there during the day. This is the parent of the worm, and by killing the old sinners the young ones will not come to sin any more. In the summer, principally during August and September, we frequently kill here two or three dozen in an evening. We lay loosely some old boards together purposely to trap them, and by following this up persistently we keep these night walkers in subjection. Like all other species these are more troublesome in some sections than in others.

JOHN N. MAY.

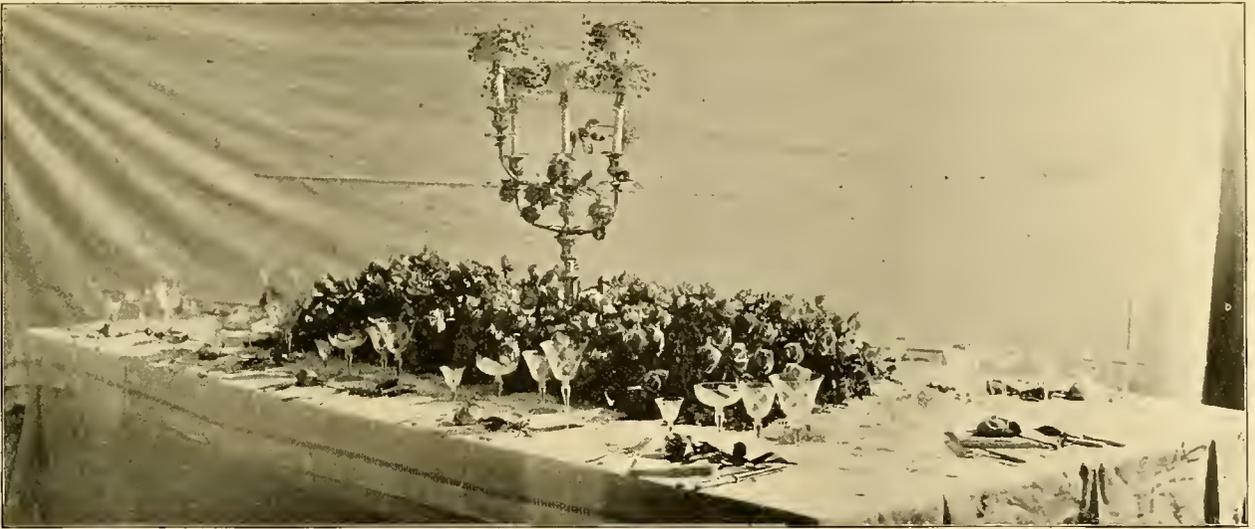

Why We Ventilate.

In a paper on ventilation read before the Society of Minnesota Florists, Mr. Louis Wilde of St. Paul said:

"In my opinion there are two good strong reasons why we should ventilate. First: To change the exhausted air of the houses for the purer one without, full of the elements necessary for plant life. Second: To regulate the moisture contained in the air in our houses."

In reference to his first reason Mr. Wilde holds that unless the air in the houses is frequently changed the plants will have an insufficient supply of carbon. And secondly that ventilation supplemented by artificial heat when the outside temperature is low, is the way to expel an over-supply of moisture. As an example of the value of ventilation during cold damp weather he relates that when through accident a house of roses was allowed to go without fire heat during such weather all suffered a check, and a week later dropped their leaves, with the exception of two batches over which the glass had been broken.

The main points made by Mr. Wilde have been frequently covered in cultural

TABLE DECORATIONS AT THE CHICAGO EXHIBITION.

notes in our columns in the past, though the scientific reasons had not been clearly set forth. To make absolutely certain as to the correctness of these reasons we submitted the paper to Prof. Wm. Trelease, Director of the Missouri Botanical Garden, who kindly replies as follows. "I enclose herewith Mr. Wilde's paper, which you sent me under date of the

20th. I should say that the two points that he makes for a liberal supply of "carbon" (which I should prefer to call available carbon, or carbonic acid, or carbon dioxide) and a reasonable reduction in the amount of moisture in the atmosphere are well made. All of the carbon that our higher plants use is taken from the carbonic acid of the air, and the

fixation of this carbon in the plant is closely connected with the amount of moisture in the atmosphere, which regulates the opening of the breathing pores of the leaves. I suppose that every plant has for itself a percentage of atmospheric moisture which is best, and any deviation from this, either above or below, would make some difference in the success

of the plant. We all know how prejudicial over-moisture (which a gardener would usually call lack of ventilation) is to seedlings, by inducing the fungus which causes 'damping off,' and the example that Mr. Wilde gives of the saving of certain plants where the glass had been broken seems to me capable of interpretation as he interprets it. However, it does not strike me that the ventilation is so much needed for carbon dioxide—of which I think any greenhouse must always contain a liberal supply—as for moisture."

Violets.

I have received from "D. P. S." a few violet plants; he says he bought the plants for Marie Louise variety, planted them on a bench, where they have apparently grown and budded, but never opened a flower. They have been grown cool.

The sample sent me was so dried up I could form no idea of the condition of the plants, much less the variety. I don't profess to be an authority on violets, yet a small bench of a few hundred plants which I have this winter are so grand in every respect that I feel I can say a little about what I don't know about violets. The longer we live the more we find out, and it appears to me that with the vast majority of florists violet growing is a gamble. You have them, and then again you don't have them. I have noticed this fall more than ever before that few men, if any, can say with any certainty "that's the way to grow violets." I have been interested the past month to notice in one small town within a few miles an attempt to grow violets under many different conditions, some with great success, some fair to middling and some a decided failure. Here are a few methods that I have noticed and had an opportunity to watch:

First: Runners taken off in April, kept in 2½ inch pots till August 1, planted in an equal span house running east and west. No glass over them till end of September. Very successful in every way.

Second: Runners taken off in April, planted in flats in three inches of soil; flats stood under apple trees till first week in August, then the plants put on a south bench of a large carnation house. These flower from middle of October, and are to-day a sight, covered with flowers of the finest quality.

Third: Plants kept in 2½-inch pots till October 1, stunted, then put on same bench as No. 2. Coming along, but no flowers worth speaking about up to date.

Fourth: Good large healthy plants lifted from field end of September and planted on same bench as No. 2 and 3. Result quite satisfactory, but not equal to No. 2.

Fifth: Plants lifted from field and planted along the south edge of a carnation bench September 15. Fairly successful; good flowers now and have been for the past month.

Sixth: Rooted runners planted in houses in June with glass on and not very much ventilation. Plants grew finely, flowered well in October and November, but are now on the wane, and have seen their best day. In the establishment is a bench of violets lifted from open ground middle of September, which are far better than those summered over under glass.

Seventh: Good plants lifted from field about September 20, planted on a bench in a lean-to back of a rose house where no direct sunlight has reached them since they were planted. Plants look healthy, but few flowers up to date.

Eighth: Small rusty plants badly

affected with red spider lifted from field end of September, planted in north lean-to without any sun. Plants now looking fine, full of promising buds and beginning to open.

I could go on and give a few more variations, but the above is enough. I would like one of those few violet experts to give us his method. In this neighborhood I can cite two growers at least who never grew violets in their lives till two years ago, and they both have been phenomenally successful. From my experience I shall enlarge on plan No. 2. Give them a carnation temperature, that is 45° to 50° at night, and let them run up to 60° or 65° in day time. Ice house method won't do to produce violets. Direct sunlight is I am sure not at all essential when flowering, but light they should have.

W. S.

Adiantum Farleyense.

Until recent years this adiantum was considered by many growers to be extremely difficult to manage. This difficulty must certainly have been overcome as it is being grown by some large firms in thousands and large houses are entirely given up to its culture.

To be successful in its cultivation, the following requirements are essential: It must be grown under the influence of abundant light, but not the direct rays of the sun; heat and moisture are particularly necessary; it will not succeed where either of these are deficient; i. e., it will not grow freely and make an elegant specimen, but will live and retain its beauty equally as long as any fern with these requirements absent. The temperature should not be allowed to fall below 55° during winter nights or the prettily colored leaflets will turn brown. It delights in a liberal supply of water; this must never be applied over head.

Regarding soil, it will grow best in pure light fibrous loam with a small quantity of crushed bone intermixed. When the plants get old the crowns harden and will not grow freely; in this case it will be best to divide into small crowns; these will grow very readily if placed in some light material in a box and put into a moist warm house; when they commence to grow they should be put in small pots and given a light warm position. This is the only method of increasing the stock as it never produces any spores.

The fronds will last a long time after being cut; they should be cut several hours before wanted and immersed in water; this will make them hard and durable.

F. L. A.

Nomenclature Committee Work.

It appears, from some statements recently brought to the notice of the Nomenclature Committee, that the above committee has been charged with personal bias in offering its criticisms. If such a feeling existed it certainly never manifested itself, and whatever was done by the committee was very carefully investigated before being committed to writing.

With reference to the chrysanthemum James Comley or Uncle Sam, the records of the American Chrysanthemum Society show that James Comley was the first name registered. The names Donald and Eugene Knapp were purely local, and it was not registered or disseminated under them. All the committee could do was to record the facts as presented.

With regard to Good Gracious and Princess of Chrysanthemums the report was accepted without any objection at

the convention. When, later, exception was taken to this the report was already going to press, and no change could be made, even if satisfactory reasons were given for doing so. It would seem that the proper time to amend the committee's report was when it was presented to the society. The Nomenclature Committee as a body were all perfectly willing to correct anything in which they were misinformed had it been proven to them that the report was incorrect at the time it was presented. ONE OF THE COMMITTEE.

Staphylea Colchica.

"Constant reader" ask: "What is the proper treatment to have it in bloom for Easter? Is it perfectly hardy same as the lilac? What time will it require and what temperature should it have?"

It is perfectly hardy; as hardy as a lilac. I forced it for the first time last winter. When received the plants were potted and stood in a cold pit. It will force for Christmas and come into bloom in about 6 weeks in a night temperature of 60°. I think that temperature suits it best, and for Easter it would come into bloom easily in 5 weeks. But the flower hangs on well and there would be no harm in having a week to spare. I forced them in a palm house where there was considerable shade on the glass. WM. SCOTT.

New York.

Christmas has come and gone, the figures are all in, and those interested may now compare results and see how it all foots up. As usual the unexpected has been doing a little happening on its own account, and the prophets, of whom there were plenty, and whose predictions were most often based upon their hopes rather than a knowledge of prevailing conditions, now have the benefit of their experience for use in future emergencies.

The story would be different from what it is had the clerk of the weather been in a different mood. No more propitious weather could have been invented for the production of good flowers in abundance than prevailed during the entire week preceding Christmas. With such weather it is almost appalling to think what might have happened had roses been "in crop" generally. The very large growers were nearly every one at the very lowest limit of production, and had the market been obliged to rely entirely upon these establishments then the predictions of a rose famine would have been fully borne out. But the receipts from the great army of smaller growers counted up enormously, and it was out of the question to bull the market in the face of such an onslaught.

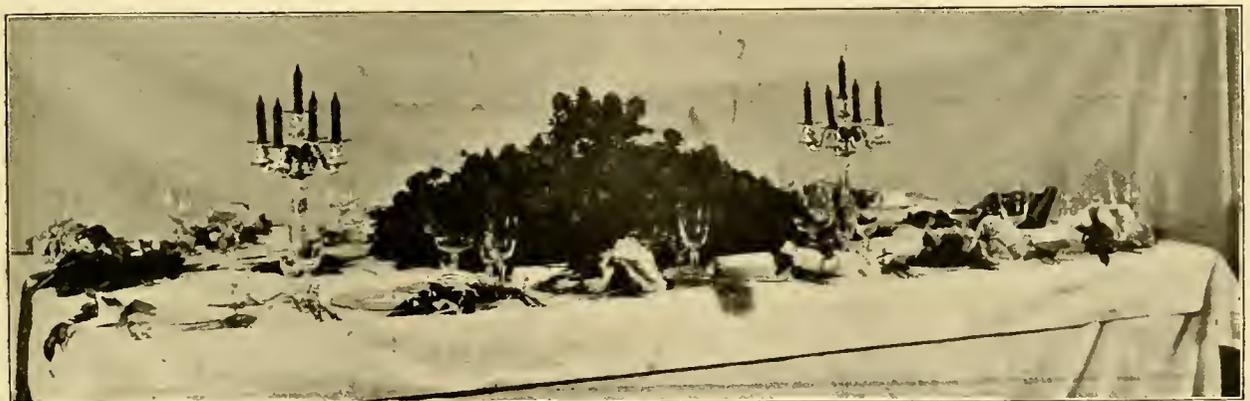

One peculiar result of the conditions above described was the sudden dumping of a quantity of badly spoiled stock on the market in the middle of the week at a time when nobody wanted it. It was very evident that the growers had been trying to save up the stuff, but the weather was upsetting their calculations, a fact which was still further demonstrated by the scarcity that followed immediately after and continued until the afternoon preceding Christmas, when dump number two took place. In the pursuit of this antiquated will-o'-the-wisp, however, it is pleasant to record that the larger and more prominent growers took but little part, and the personification of the quadruped with the long ears was left to their more stupid brethren who do not read the trade papers or whose skulls have not yet developed a vulnerable spot. It is encouraging to note that thies

NO 10. ARRANGED BY O. J. FRIEDMAN.
TABLE DECORATIONS AT THE CHICAGO EXHIBITION.

unwise individuals are rapidly decreasing in numbers, and that altogether the quantity of stored stock seen was much less than ever before.

American Beauty was the best stock in the market. Everybody wanted them, and many more could have been sold, both locally and for distant points. There were some good Magna Charta and Diesbach in, and they sold well at from \$50 to \$75 per hundred. Small roses cleaned up fairly well, especially the colored varieties. White roses suffered somewhat in common with white carnations and other light colored stock. The sunny weather brought out a grand coloring on pink roses, Bridesmaid being particularly handsome. Carnations were aggressive and specimen blooms of the fancy varieties came in as sharp rivals for the smaller roses in popularity. Extra fancy flowers brought from \$6 to \$8 per hundred, and ordinary grades from \$2 to \$3, while the rubbishy lots of small or stored stuff brought nothing at all.

Violets unless superlatively good got it "where the chicken got the axe." In quality they varied greatly, but the supply was far beyond the demand, as predicted in last week's notes. That the stock of violets could have been kept in bounds by picking and putting on the market regularly at reasonable figures, say one-half of the price demanded, there is not the least doubt. A period of meditation on the dangers of overreaching is respectfully suggested to the violet growers before it gets too late.

The shipping trade might with a little encouragement have been made a powerful factor in stiffening up prices locally. The lack of supply at the time needed for this trade together with past experiences in handling stored stock at maximum prices had the effect of making the wholesalers cautious, and some of them preferred not to touch the shipping business. Those who made an effort for it had no trouble in securing orders, and a fair amount of this trade was transacted, but it was by no means as large as it might have been. There was difficulty in procuring stock on the 23d, which fell on Sunday this year, owing to insufficient accommodations on some of the railroads, Summit and Madison being especially unfortunate in this respect.

The retailers held off from giving advance orders and left the wholesale dealers in doubt akin to agony up to the last moment as to their wants. Throughout the preceding week they gave the cut flower trade but little attention, and devoted their time to the trade in holly, mistletoe and greens, and in advising their customers regarding the advantages of azaleas and other plants over cut flowers as holiday gifts. The people evidently believed them, for the trade in fancy wreaths of green trimmed with ribbon, etc., was unprecedented, and azaleas in flower sold as never before, the profit on these goods being much more tangible than that on roses, carnations and violets at holiday prices, and as to ordering stock for cut flower demands "Brer Fox, he lay low."

The large growers spent more or less of their time in town and kept a close watch on the movement of stock and general tendencies, and it was not surprising that an undercurrent of dissatisfaction was discernible and grievances on all sides given an airing. It seemed to be strongly impressed on the growers that opportunities for high prices had narrowed down until now Christmas is about all there is left for them, and this rapidly going the

same way, while the period of low figures is correspondingly on the increase.

Mr. A. Warendorf has offered to arrange the decorations on the table at the banquet of the Florists' Club at the Arena on January 19, and the committee has accepted the offer. All contributors of flowers will be requested to send them to Mr. Warendorf, and he will give his time to the work, which is a guarantee that it will be well worth seeing. The sale of tickets for the occasion is already quite large.

Siebrecht & Wadley are receiving from Trinidad magnificent leaves of *Cycas revoluta* and *circularis*, the latter averaging six to seven feet in length.

Philadelphia.

Christmas, merry Christmas, is over and a right merry time it was for all branches of the business. The grower whose houses were just in crop, or his neighbor who had managed to accumulate a stock by ways known only to those of the fraternity, were made happy by the demand and high prices. The commission men were smiling all week owing to the bright weather and the prospects of plenty of good stock to handle, and their features have hardly relaxed yet, as the remembrance of the good prices obtained flit across their memories. The storekeepers were happy on account of the good business in spite of the high prices. The volume of business increased about twenty per cent and prices on nearly all kinds of stock were from ten to twenty per cent higher.

Roses of all kinds were in fairly good supply, of course there were not enough Beauties or Belles, still there were a great many sold. John Burton had a fine stock of these two varieties as well as a goodly quantity of Brunners and Laings. The first quality of these varieties brought \$75 per hundred. His Meteors were also very fine and at \$20 per hundred there was not near enough to supply the demand. Mr. Lonsdale had a good lot of Beauties and also a good stock of orchids, which sold well, the cypripediums brought \$20 and the cattleyas \$50 per hundred. His Helen Kellers were very fine and all he could get for Christmas brought \$8. In the stores when it came to a question as to whether it should be a dozen of Perles, Gontiers or Helen Kellers at about the same price the carnations were selected as often as the buds.

Mr. Heacock had some Brunners and his stock of other teas, notably Brides and Bridesmaids, was very good. G. Anderson had some fine La France and Kaiserin, and Smith & Whiteley's stock of Kaiserin and Testout was very good. Messrs. Pennock of Lansdowne sent in some extra fine La France and Testouts.

Prices for roses were Beauties and Belles \$75 down to \$25; Brunners and Laings \$75 straight; all the large teas \$15 to \$20, smaller teas such as Gontiers, Perles, etc. \$8 to \$10.

Carnations were in great demand and of excellent quality as a rule; there was no sleepy stock in sight; this may be accounted for by the high prices and demand of the two weeks previous to the holidays. Any advance on these prices would have been prohibitive, and for once the growers were satisfied and let the stock go. It was a very poor specimen of the divine flower that did not sell at sight for \$3, and anything a little better brought \$4, at which price most of the stock was sold. Extra fine flowers sold for \$5, while Helen Keller and Della Fox, of which latter there is a limited stock,

brought \$8. Extra fine Wilders are sent in by Thos. Meehan & Son; as they grow it Wilder is hard to heat.

Bouvardia was to be had in limited quantities, and brought \$2.50 per hundred. Violets were rather plentiful; they were to be seen in all stages of perfection, and brought all sorts of prices. The top notch was \$2.50, but very few aspired to this position. They had to be fine to bring \$2, and the price soon weakened to \$1.50, at which price the majority of the stock was sold. Double violets are in great demand when they are scarce, but their market is soon overloaded; as the stock increases the demand falls off. As an instance of the fact that they were in full supply in some quarters, a Twelfth street florist decorated the harness of his dapple grey with double violets. He wasn't mean with them either; they were to be seen on both sides, front and back as well. Double violets have been considered the flower par excellence for the corsage, but it seems that as a decorative flower they can be made to go much farther.

Bulbous stock was to be had in quantity, and was of good quality, with the exception of valley, which was not up to the standard. \$3 to \$4 was asked for Romans, \$4 for paper whites and \$4 for valley. W. K. Harris had some scarlet Duc Van Thol tulips which brought \$5. Atkinson of Edgewater Park is first in with freesia, and had a few at 50 cents per dozen.

There was a good demand for blooming plants and azaleas; cyclamens, poinsettias and the like sold well. Azaleas sold for from \$18 to \$30 per dozen plants. Cyclamens, the stock principally from R. Craig's, brought \$50 per hundred pots. Edwards & Son of Bridgeton had good ardisias \$6 per dozen in 4-inch pots, well berried. House plants had a great sale, and fern dishes were filled without number; the demand for these dinner table ornaments seems to be increasing.

All kinds of Christmas greens sold well, notwithstanding that the streets were lined with them. Holly and mistletoe was very well berried this season and where it was handled carefully it sold readily at good prices, but there was lots of mistletoe that would not bring enough to pay the freight on it.

Smilax did not sell well for some season, probably because people are more particular and demand adiantum where before smilax used to be good enough, it moved very slowly at \$15.

The weather all the week before and up to Christmas day was perfect; there was plenty of sun, which brought out the flowers and the shoppers alike. There was some 10 degrees of frost on Christmas morning, which made it a little difficult to deliver plants, but this was the only draw-back. Since Christmas the flowers generally and particularly roses have taken a new lease of life and have colored up to a remarkable extent. Bridesmaid that puzzled the growers how to account for their pale appearance on the 24th are now, the 26th, a most beautiful shade and the weather has been cloudy ever since. At this writing a heavy snowstorm has set in, the first of the season, and it looks as if flowers would be scarce for a few days.

H. Bayersdorfer & Co. have just issued a catalogue which for artistic finish is one of the most beautiful we have ever seen. Every page is illuminated with elegant half-tone cuts and designs, illustrating their very large line of florists supplies. It is a very useful book and contains cuts of

designs that should be in every florist's stock.

Hot house tomatoes are now selling at from 20 to 25 cents per pound, and mushroom rooms at from 40 to 50 cents. K.

Chicago.

The Christmas trade, though not phenomenally large, was in every respect most satisfactory. The growers certainly have no reason to complain. In the first place the weather for two or three weeks past has been exceptionally fine, such as the most exacting grower could find no fault with in any respect, the days clear and mostly sunny and at night just a little frost. The effect of these conditions resulted, as might be expected, in a much larger supply than was looked for in the early part of the month, but the demand keeping pace with the supply no drop in prices occurred except on violets. These at one time threatened to be a glut. In the early part of last week the dealers were actually begging for violets but scarcely any could be had. Commencing Saturday they began to come in freely and by Monday the market was swamped with them. Opening at \$2.50 for A1 quality and \$2 for average stock prices gradually dropped to \$1.50, and poor stock went at much less, although towards the close the market advanced again a trifle. In quality the stock was fully up to the average, some being exceptionally fine.

In roses the stock was much more plentiful than was expected; this was doubtless owing to the fact that much of the stuff was held back until the last two days; a good share had evidently been pickled for a long time and caused more or less complaint from the dealers. This stuff, however, had little effect on really good stock, which latter was all disposed of in short order at top prices. On pickled stock of course there was quite a cut in prices but very little of even this class went at less than 5. The best Beauties, of which there was a fair supply, sold at \$75 to \$100. Testout, Bridesmaid and Meteor were greatest in demand, the supply being altogether inadequate to meet the call for these three varieties, the price ranging from 15 to 18 for good stock. In quality Testout and Bridesmaid, particularly the latter, were uniformly fine. The Meteors, however, ran very uneven in color. Brides appeared to be the most plentiful of all roses, in fact this was the only variety that had to be urged upon the buyer. In quality the stock varied a good deal, some being extra fine while a large part of the supply was only fair and some very poor. The best grades went at 15 to 18, medium at 10 to 12. Really fine La France and Albany were very scarce, the best might be classed as fairly medium; the price, however, ruled firm at 12 to 15. Merrimets, though of generally rather poor quality, sold well at 10 to 15, and even higher on some few high grades. Perles, Gontiers and Woottons brought 6 to 12. Some of the Gontiers sent in were extra fine and easily commanded the top figure.

The supply of carnations was about equal to demand, both being heavy. In quality this season's cut is far superior to anything seen before on our market. Of course some of the flowers went to sleep before they left the wholesale shops, still by far the largest part of the stock was in most excellent shape. Daybreak showed up in grand shape, the average quality being extra fine, and although the supply was probably four times as large

as was ever seen here at Christmas very few flowers were sold at less than 5, some extra select bringing 6. Scotts, also very fine, were scarce, and so was Helen Keller, the latter good but not of the phenomenal size we have read about. All the above sold at 5 for the best. Tidal Wave, Portia and Garfield were all good and in extra demand at 3 to 5, some extra fine Tidals (grown by Henry Mundt) going as high as 6. White was most plentiful and the only color of which a few were carried over. Romans came in very freely; the demand for these being rather light some stock was left unsold. Narcissus went fairly well at 4 Valley, demand good, stock fair, both in quality and supply, price 5 to 6. There was some very fine mignonette, selling readily at 3 to 4.

The local retail trade is reported excellent everywhere. Everything was cleaned out and fairly profitable prices were realized. Holly sold well, but green went rather slow.

While the general public lamented the absence of regulation Christmas weather the florists were mighty well satisfied. Delivery was accomplished with comparative ease and there were no losses. The day following Christmas was colder and Thursday was sufficiently wintry to satisfy the most fastidious. The snow fell all day long and was accompanied by a blustery wind. The boys can thank their stars that such weather did not come a few days earlier.

The annual meeting of the Horticultural Society of Chicago will be held at the Sherman House Saturday, January 12. This will be an important meeting as in addition to election of officers for 1895 some proposed changes in the policy of the society will be up for discussion and action.

Boston.

Christmas weather in Boston was glorious, and the florist trade enjoyed its full share of patronage from the multitude of shoppers who thronged the streets. There were a couple of surprises in the cut flower trade. The biggest of them was that the rose as an indispensable favorite got, not quite a black eye, but a slightly discolored one; and what do you suppose did it? "It" said the carnation.

The eagerness with which fine carnations of the modern well-fed type were snatched up at full prices was most remarkable. Equal food for thought was the indifference manifested towards the once invincible rose when carnations could be had instead. Roses were not overplentiful, but there was a supply sufficient to fill all reasonable demands, and white roses went decidedly slow. White carnations were slightly overstocked, but colored ones to the number of many thousands more could have found a ready market. It really begins to look as though the time is not far off when the price of roses will cease to be the all important consideration in holiday trade.

Violets suffered more than any other flower from overstocking, and some of the growers who have been unwilling to pick their flowers for the past two or three weeks, excepting under the inducement of maximum holiday figures, see now where they made their mistake. The present is the first season in which single violets have been grown to any extent for this market. Large quantities of the Czar are being brought in, and their fine color, superior fragrance and comparative cheapness have brought them rapidly into popularity, the effect

being felt sharply by the old favorite doubles. Undoubtedly the single violet has had much to do with the slump in double violets in the present instance.

With the exceptions above noted the wholesale dealers are all well satisfied with their Christmas trade. Local demands materialized late, but were all right in the end. Shipping might have been done more extensively if the stock procurable for that purpose had been up to the mark, but some of the growers have not yet forgotten their old game, and there was too much aged stock floating round to make shipping either satisfactory or safe. The retailers all seem highly elated over their business, which they generally report as the best they have ever had.

Holly sold better than ever before, and even mistletoe showed considerable life at the last moment. Holly wreaths were well cleaned up, but there was not any use for holly crosses, and many of these are left, as are also the large elaborate wreaths made of evergreen foliage, and cones in variety. These were once very popular, but people seem tired of them now. Down at the big markets the usual display of greens were made; whole forest of fir trees whose balsam odor was exceedingly pleasant; coils by the thousand of festooning and countless wreaths, stars, bells and crosses gaily spotted with everlasting in every hue, and on every hand the loquacious country man whose family had spent the whole fall in fashioning the wondrous contrivances and who addressed you as "My friend" and "Captain" as you passed his stand; but apparently this line of trade has declined greatly from its former proportions, the southern holly, pines and other introductions of the florists having largely superseded it.

Mr. Michael Barker of Cornell University is expected to address the Gardeners' and Florists' Club at its next meeting.

Toronto.

The annual meeting of the Gardeners' and Florists' Association which was held on the 18th inst. was largely attended and great good humor prevailed. At the election of officers no one seemed to want to fight, and only in the case of the second vice-president was the ballot necessary. For all that though there were several surprises and great changes were made. Mr. A. H. Ewing for private reasons (that afore mentioned girl I expect) declined to run for secretary for at least this year and Mr. H. Simmers did likewise, for private but not similar reasons. These two gentlemen are not by any means lost to the association, however, they will still take an active interest in all its proceedings. The slate stands as follows now:

President, Walter Muston (of Messrs. Spears & Muston); 1st vice-president, Geo. Reeves (Reservoir Park); 2nd vice-president, A. Macpherson (gardener to Col. Sweny); secretary, E. H. Carter (Riverside Park); treasurer, Wm. Hill (florist, Yonge street); assistant secretary, M. B. Spears (Der Park); executive committee, Messrs. Vair, Chambers, T. Manton, Briggs, Simmers, Tidy and Mearns.

There is a good lot of new and young blood in this crowd and if they don't make things hum this year it will not be the fault of the other fellows.

The late secretary and treasurer made their annual reports, both showing a favorable state of affairs although the balance at the bank is not overpoweringly large. Printed statements were

ordered to be distributed at the next regular meeting.

There was some discussion as to the advisability of amalgamating the July show and the chrysanthemum show and a committee was appointed to confer with the directors of the Electoral District Agricultural Society who hold the July show. This committee wants to be careful how it acts in this business, the circumstances are complicated and peculiar and they will have to deal with men of considerable shrewdness and influence. The association does not want to play second fiddle to this agricultural society if it can be avoided.

On the Saturday before Christmas the market seemed to be pretty lively and the florists were doing a fair business; the weather turned colder in the night but it was just warm enough to allow of palms, etc. being exposed under an open shelter. Twenty-five cents a bunch of seven violets was being asked, not many were being sold at that price though, but the stores want them and they will be scarce on Monday. At the stores trade was very good too and people appeared to be spending their money freely wherever they got it from.

Sunday was a cold day, 20° of frost. Monday morning opened with about 8° of frost and getting milder, business lively all day but rain came on about 5 p. m. and spoiled the evening a good deal. However, when sales come to be totalled up I think it will be found that the average has been maintained if not exceeded.

Later.—Flowers of all kinds were cleared out. Some stores had sold all their roses by 12 o'clock and could not get any more. I was told that the big rose growers could have sold 20,000 more if they had had them. E.

Baltimore.

Merry Christmas to all! We have had one here in Baltimore, and though by the time this reaches the eyes of our neighbors Christmas will be a fast disappearing memory, yet we wish them all the quick sales and prosperous business which we have enjoyed here.

To begin with, there was a fairly sufficient stock of everything, even including violets, and the quality was uniformly excellent. The store men took advantage of it and made one of the most brilliant displays of window dressing ever seen here. The weather was as mild as May and with the exception of a slight rain late Christmas eve there was nothing to prevent the most delicate of shoppers from doing all the buying she wished personally. Don't say they didn't take advantage of it. Seldom, if ever, before have the streets been taken possession of so completely by eager and jolly sight-seers and shoppers.

The market men ought surely to be happy, for better weather for displaying plants and flowers in the open air could not have been expected; and a more extensive display of plants, flowers, holly, wreathing, and all sorts of Christmas "fixings" from the twenty foot spruce "tree" to the moss for laying around it could not be put in the stalls; and it all seemed to sell too. Everybody seems struck with an idea that the reign of hard times is over for a little while at least.

The customary aberrations of prices marked the season, particularly in violets, which had no doubt been boarded until the time when all expected \$2 at least at wholesale. In fact they were marked up at the exchange to \$2.50, but the supply

was so good and plentiful that they were sold at the same place Christmas morning for 50 cents a hundred. These violent fluctuations in the wholesale market did not affect the retail prices as much as might have been expected, and though a little inclined to droop Christmas morning prices were pretty uniform all over town.

The stock of primulas, cyclamens, ardisias and araucarias disposed of was something surprising, and at fair prices, cyclamens in 6-inch pots bringing \$1 each, primulas 35 to 50 cents, ardisia \$1, and other things in proportion. May the ball keep going now that it has had a good start is the earnest wish of many besides MACK.

St. Louis.

Christmas trade from all accounts can be classed as very satisfactory; almost all report having sold out at good figures early enough to insure a successful season.

Beauties, as was expected, took the lead, ranging in price from \$1.50 to \$2 at retail, according to the location, and were scarce even at that figure. The wholesale price was \$1 for firsts, ranging downward for seconds and thirds. Meteors were easily second in demand, good flowers selling as high as \$9 per dozen, this being the top notch, however, poorer stock dropping according to quality. Colored roses seemed to be called for in preference to white, good Brides would not bring \$5 per dozen. The same parties refusing to pay \$5 per dozen for good Brides made no objection to paying \$1.50 each for Am. Beauties.

Violets were in good demand, Marie Louise bringing \$4 per 100 retail; southern grown single went up to 40 cents per 100 wholesale, at which figure quite a number were sold.

Parties handling plants report an exceptionally good demand both for green and flowering plants, also for ferneries, quite a number of them having been filled.

Green of all kind sold well, several having sold out clean before Christmas day, and not having time to make up anything in the final rush lost considerable in possible sales.

Stock coming into the wholesalers showed less the effect of pickling than any received at the same time for several seasons. It is to be hoped that the improvement in handling will continue as it is vastly more satisfactory all round.

Wholesale prices were about as follows: Beauties 100 to 25, Meteors 15 to 25, Mermets, Brides and Bridesmaids 15 to 25, Perles and Woottons 8 to 10, Narcissus 5, Romans 3 to 5, carnations 3 to 4, poinsettias 12 to 20, double violets 2 to 2.50, and single 40 cents per 100.

R. F. T.

Buffalo.

Christmas has once more passed away and to the florist it must be called a satisfactory one. The weather continued its fair course and nearly all day Monday tender plants could be delivered without any protection of any kind, which helped along wonderfully. There has been no time to interview many of the craft, but what little I can glean is to the effect that trade all round was equal to the best of former years, and prices were certainly as high as ever and in some lines, more particularly plants, were a considerable advance over other years. The same old favorites ruled the day, roses, carnations and violets; Beauty was too ex-

alted altogether and most everybody kept their fingers off them. Brides, Bridesmaids, Meteors, Woottons and Perles sold well. There were flowers enough to go round and with roses and violets a few to spare. Carnations sold out very clean and retailed at one dollar per dozen.

The trade in holly and green was very heavy and although it was sold at every street corner it all went. Everybody wants a piece of holly in some shape or other. The demand for mistletoe was light and so was the supply. We could very near get along without this imported parasite.

The feature of this Christmas trade was decidedly the demand for plants and some of the firms could have sold far more than they had to offer. Medium sized palms went well. The plants that figured most in the sales besides palms were poinsettia, azalea, Liliun Harrisii, begonias, linum, primula, pans of valley, Roman hyacinths and narcissus. It can safely be said that in this branch of the business there was a marked increase, and it did not all come on the last day either, but started in a week ago.

W. J. Palmer & Son had a few good chrysanthemums, but W. J. senior says they did not create any great enthusiasm. The same gentleman showed me this morning a bunch of La Reine tulips that he said took fourteen days to force; they were grand with stems a good 12 inches in length, but there is no great demand for that stuff for a few weeks yet.

Daybreak held its own against all rivals as the popular carnation of the day, and within a radius of twenty-five miles of Buffalo a great many thousands of that variety were picked. W. S.

Cincinnati.

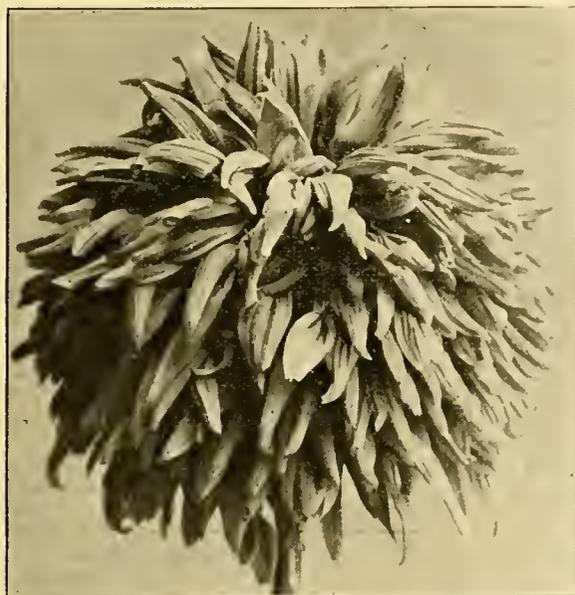

Christmas proved a surprise to most in the trade, business being much better in every way than was expected. The sales were larger than last year, but in most cases prices fell considerably below former averages, which was due to the bad weather. But neither wholesale nor retail men are inclined to complain, and as a rule they feel very cheerful.

The bulk of the flowers received here were of good quality. Red roses and red carnations and violets were in greatest demand. Beauties brought from 50 to 60. Meteors and Gontiers sold well but were very scarce. Perles sold at 6 to 8 and were a little scarce. Romans were in good supply and sold at 4. Some good valley was seen. Carnations sold readily at from 4 to 8; Harrisii only averaged \$2.50 to \$3 per dozen; callas hardly sold at all.

Among the retailers the general expression is one of satisfaction. Buyers were slow in placing their orders, most of them coming in the last day. Holly sold very well and was fine; many of the dealers ran short.

Plants of most all kinds sold well. There is a decided increase in demand for small palms for Christmas gifts, such as could be sold for \$2 to \$3. Azaleas, poinsettias, cyclamens and primroses sold quick. The finest primroses I have ever seen were grown by Mr. P. Popp of Central Covington. They were in 5-inch pots and sold for 50 cents each retail. There were a few good "mums" left in the market and they brought good prices. They were mostly E. G. Hill and Christmas Eve.

There was a great demand for ferneries and small jardinières and the stock of suitable ferns was none too large. There has been a great call for this class of

CHRYSANTHEMUM JOHN E. LAGER.

CHRYSANTHEMUM J. H. TROY.

goods this fall. The growers could not get the plants to a suitable size to sell before it was ordered and had to go as it was.

The retail orders were mostly for cut flowers, very few baskets being made up.

Of bulb stock the valley sold poorly. There was but a limited stock in the market grown from this season's pips, with hardly any leaves. Roman hyacinths were more plentiful than in former seasons but good stock brought \$4 per 100 at wholesale. Freesia was to be seen in small quantities and sold readily.

One of Mr. Schwartz's greenhouses was partly destroyed by fire. P.

Chrysanthemum John E. Lager and J. H. Troy.

These two chrysanthemums were among those favored by the committee for certificates from the Chrysanthemum Society of America. The accompanying photographs show flowers that had been fully expanded for three weeks.

The varieties are equally robust in growth and habit, the leaves well up to the flowers. They grow three to four feet high in the bench. The first flowers were cut October 5. Apart from their earliness they possess excellent shipping qualities.

John H. Troy is a large globular flower, Japanese, white, the florets broad and of great substance. John E. Lager is a Japanese reflexed, rich golden yellow, the florets of medium width and good substance. F. L. A.

Short Hills, N. J.

Wild Flowers.

Now that quite a number of our native wild flowers are being used in quantity in our gardens it may be of value to some to have the benefit of my experience as to the proper time for transplanting the various species from their native haunts to the garden or nursery. It is very essential that these plants be lifted at the right time as otherwise failure is almost sure to result. As a general rule the proper time to transplant a hardy perennial is when it is dormant. Aquatics

should be gathered just as growth begins in spring or as it ceases in autumn, as when absolutely dormant they cannot be found.

The following may be handled at any time though the best results will be had if done in spring and fall, orchids excepted: *Chiogenes hispidula*, *Coptis trifolia*, *Galium* species, *Mitchella repens*, *Mitella media*, *M. diphylla*, *Parnassia caroliniana*, *Phlox divaricata*, *P. pilosa*, *P. subulata*, *Pyrola* species, *Smilacina trifoliata*, *Maianthemum bifolium*, *Tiarella cordifolia*, *Trientalis americana*, *Calla palustris*, *Caltha palustris*, *Drosera rotundifolia* and other varieties of *drosera*, *Sarracenia purpurea*, *Aplectrum hyemale*, *Calopogon pulchellus*, *cyripedium* species, *goodyera* species, and most ferns except *Woodwardia virginica*, which is an aquatic species, growing where at some seasons the water is too deep for it to be gotten at. Its proper season is May and autumn.

The following can only be handled successfully at the time I indicate; the stems decay entirely later, and they grow all winter: *Amenonella thalictroides*, April 20 to May 30; *Isopyrum biternatum* the same. *Anemone nemorosa* (after flowering) May 30 to August 15, *Arisæma dracontium* (after flowering) June 1 to September 10; *A. triphyllum* the same. *Claytonia virginica* (after flowering) April 20 to May 15. *Dentaria diphylla* and *D. laciniata* (after flowering) May 1 to June 30. *Dicentra canadensis*, April 1-10 and from May 15 to winter. *Eriogonum bulbosum*, May 15 to June 15. *Erythronium americanum*, May 10 to June 10. *Hypoxis erecta*, June 1 to October 1. *Panax trifolium*, May 10 to June 30. *Podophyllum peltatum*, April 1-10, June 1 to end of year. *Ranunculus fascicularis*, May 20 to September 1. *Sanguinaria canadensis*, April 1-10, June 1 to end of year. *Gentiana crinita* and *G. serrata*, May 15 to June 15 (annual). *Trillium grandiflorum*, *T. erectum* and *T. cernuum*, May 15 to August 30.

Bog plants: *Sagittaria variabilis* and *S. heterophylla*, May 1 to June 1, September and October.

Aquatics: *Brasenia peltata*, May 10 to July 1, September and October; *Nuphar*

advena the same. *Nymphaea reniformis* (tuberosa) May 1 to July 1, September and October. *Pontederia cordata*, May 1 to June 20, October.

Orchids: *Pogonia ophioglossoides*, after flowering, May 20 to close of year.

Liliums: *L. canadense*, and *L. superbum*, August to October, never in spring; *L. philadelphicum*, July 15 to October, never in spring.

The latest dates named are generally the latest at which a plant of the species named may be found. Most of them will have disappeared ten or fifteen days before. The periods named are when the plants are dormant or nearly so and they may then be lifted, and shipped if necessary, with no more risk than with other plants. W. A. BROTHERTON.

Address THE AMERICAN FLORIST CO., Chicago.

ALWAYS GIVE THE STATE.—We have received a communication dated "Dexter, December 11, 1894." As there are 22 postoffices named "Dexter" in the U. S. Postal Guide, the address given is quite valueless. We mention this case for the reason that it is not an isolated one. Hardly a day passes that we do not receive addresses equally vague. In some cases we get the state from the postmark on the envelope, when this happens to be legible—which is not often. But omitting the state is not the worst. Not infrequently we receive an envelope enclosing simply a dollar bill, without a scrap of information as to where it came from. These cause us much annoyance, and in a few cases that we were unable to trace out we suppose the senders have condemned us as swindlers because we did not send them the paper.

"A LADY VISITOR" sends us a communication in which she severely criticises the appearance of, and the language used in her hearing by, the employees at a greenhouse establishment recently visited by her. But she goes too far in assuming that these men were representative of florists' employees as a class. While it is possible that some employers are not as particular as they should be, it certainly is a fact that the majority thoroughly understand the importance of having in their employ only men of gentlemanly instincts. As to appearance, a greenhouse hand can not, from the nature of his work, be always as neat as might be desirable, but "lady visitor" will find more true gentlemen in working overalls than in more showy raiment.

MR. C. W. NORTHRUP, Lagrange, Ill., sends us a bunch of violets that would be hard to beat. Mr. Northrup's violets have long held a high place in the Chicago market, and he is evidently still secure in his position as the crack grower of this flower.

THE AMERICAN FLORIST (\$1.00) and *Gardening* (\$2.00) together to one address for one year for \$2.50. Send orders to American Florist Co.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. HIGGINS Toronto, 1st vice-president; A. L. HOEN, 114 Chambers street, New York, secretary and treasurer.

THE EXECUTIVE COMMITTEE of the American Seed Trade Association will meet at the Cosmopolitan Hotel, New York, on Friday, January 4, 1895, at 10 a. m.

Catalogues Received.

Sunset Seed and Plant Co., San Francisco, fruit trees; C. S. Harrison, Weeping Water, Neb., Rocky Mountain evergreens; F. Harteldes & Co., Lawrence, Kans., seeds; Wm. Swayne, Kennett Square, Pa., carnations; A. Blanc, Philadelphia, electrotypes of flowers, plants and shrubs; A. Blanc & Co., Philadelphia, new and rare plants; same, Japanese flower pots; same, sacaline; W. R. Sch mire, Avondale, Pa., carnations and coleus.

Greenhouse Building Association.

A German stock company has been organized on the building association plan for the purpose of selling land to and building greenhouses for gardeners, in a suburb of Berlin. The land is sold on the following conditions: The purchaser pays not less than one-tenth of the price in cash and furnishes proof that he has a like amount as a working capital for carrying on the business. The remainder of the price is to draw interest at 4%, secured by a life insurance policy to be deposited with the company. The policy expires with the party's 60th year, or at his death, in which event the company collects on the policy and turns the property over to the heirs free of debt.

News Notes.

SALEM, MASS.—Levi Dodge has purchased the greenhouse of W. S. Ward on Bridge street.

BUSTLETON, PA.—Jas. T. Baker has added a new violet house 10x100, heated with hot water, and a pansy house 5x100.

GREENLAND, PA.—Jacob B. Weever has just completed two new houses, one a carnation house 24x70, the other a violet house, 10x70.

BALTIMORE, MD.—Matthew Richmond has recently gone into the florist business on Erdman avenue, between Belair and Harford roads.

LANSING, MICH.—H. F. Dew has sold his Capitol avenue greenhouses and will remove to Albion, Mich., where he will start a new business.

MILWAUKEE, WIS.—Messrs. W. H. Ellis and C. C. Pollworth have resigned their positions as secretary and treasurer of the Wisconsin Flower Exchange.

PARSIPPANY, N. J.—Harrison Quinby of the Meadow View Greenhouses has added four new houses to his plant, two 100x25 and two 25x10, making his total glass area 11,000 feet.

FALL RIVER, MASS.—Woodcock & Lannagan is the name of a new firm here. They have built one house 37x16 at 58 New Boston road, and will add more glass next spring.

TERRE HAUTE, IND.—Mrs. Sarah C. Deming has generously donated 50 acres of land to the city to be used as a public park, on condition that the park be improved within three years.

BRUNSWICK, GA.—C. S. Tait has retired from the florist business, having accepted a position with a local firm in another line, the same position that he held for 10 years prior to embarking in the florist trade.

WATKINS, N. Y.—Jas. Andrews has leased the old Frost greenhouse for a term of three years, and is now putting it in order for business. Another greenhouse of equal size will be erected early in the spring.

HINGHAM, MASS.—W. L. Bradley, the manufacturer of superphosphate whose name is familiar to every farmer and gardener in the land, died on the 15th inst. He owned large phosphate mines in North Carolina and Florida and was reputed to be a millionaire. Thirty years ago he was without a dollar. He leaves behind him an untarnished business record.

Blacktown Philosophy.

It am a mos' seryus mistake to s'pose dat jes stiekin flowahs in a wiah frame 'ticles de pahy to de name ob floral artist.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser in these columns.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By competent florist, age 25, single. Best of references. Address FLORIST, care The Royal, 308 State St., Chicago.

SITUATION WANTED—By a first-class gardener or florist, age 22, 8 years' experience, sober and reliable; best of references. Address GARDENER, 706 Central Ave., Dover, N. H.

SITUATION WANTED—As all round florist; good propagator, growing roses, carnations, palms, ferns and general stock; single, 10 years' experience. Best of references. H, care American Florist.

SITUATION WANTED—By competent man as gardener in private place; understands all branches of gardening, building and laying out of grounds. Rose and grape culture a specialty. Address M. M., care American Florist.

SITUATION WANTED—By a competent gardener, S. German, 41, married; has experience in all branches of gardening; first-class references; can take charge about private or commercial place; Pennsylvania preferred. Address G. H., care Am. Florist.

WANTED—Agent, by one of the oldest Dutch bulb houses. Particulars and references, address BULL, care American Florist.

WANTED—Cut flower arranger to take charge of a cut flower department. Must be a fairly good maker-up, quick and energetic. Write, giving experience, references and wages wanted, and when can commence work, to SAMUEL L. MARSHALL, Penn. Ave. near Sixth St., Pittsburg, Pa.

WANTED—For vicinity of San Francisco, a thoroughly competent man to grow cut flowers, principally carnations, lilies and roses. Must well understand propagation, and take sole charge of 15,000 feet of glass. Best of references required as to reliability, honesty and sobriety. Address, stating wages expected and giving references, L. GETZ, 310 Market St., San Francisco, Cal.

FOR SALE CHEAP—Large second-hand florist's Ice Box, value about \$75. VAUGHAN'S SEED STORE, 88 State Street, Chicago.

FOR SALE CHEAP—Florist business, \$5000 a year, in Pueblo, Colorado. Best trade in the city. Apply to PUEBLO FLORAL CO., 325 W. 4th St., Pueblo, Colo.

FOR SALE—3000 lights of 8x10 A single thick glass. Will sell for \$1.00 per box f. o. b. Chicago. Make me an offer. Address MARSHALL, care American Florist, Chicago.

FOR SALE—Down combined steam boiler and pump, 4-horse power, 1½ inch suction, 15-inch discharge pipe; good repair. Cost new \$300; price \$150. Write for particulars. C. E. ALLEN, Brattleboro, Vt.

FOR SALE CHEAP—And on easy terms, on account of dissolution of partnership, one of the best paying florist's places in the center of Chicago. Two new houses 100x12 feet, stocked with bedding plants. Long lease. Address CONTRACTOR, care American Florist, Chicago.

FOR SALE—Having recently inherited some property in the Old Country which necessitates my going over there, I offer my entire business for sale, consisting of 25,000 to 30,000 square feet of glass with large house and store, fully stocked with roses, carnations, violets, palms, and general stock, together with a fine catalogue seed trade, spring bedding, bulb and cut flower trade. This is a grand opportunity for a party with capital, or to form a stock company, as there is plenty of scope to develop an immense home trade. For further particulars inquire of THOS. T. HOLTON, 81 South St., Morristown, N. J.

"HARD TIMES" PALM COLLECTIONS. The hard times are going and so are the palms, but we can still supply 17, 3 and 4-in. palms for \$3 and \$1 for \$5 each (regular price \$8). These comprise the best varieties, including Lantanas, Kentias. JUST WHAT THE RETAILER WANTS.

WILLIAMS & SONS CO., Babvsh, Ill.
Mention American Florist.

FOR SALE

MY ENTIRE

Horticultural Establishment.

One of the largest in this country devoted entirely to the culture of

CUT FLOWERS.

Situated on Jersey City Heights, N. J., within 20 minutes of New York City by steam railroad every half hour, or within 30 minutes by electric cars every 3 minutes. For convenience to the Metropolis, it will be seen the location is unsurpassed.

The "Plant" covers 3½ acres of land, on which are 26 Greenhouses, (Over 50,000 Square feet of Glass),

All at this time well stocked with 30,000 Carnations, 15,000 Roses, all of the leading forcing sorts, as well as a large miscellaneous stock, in fine condition.

The houses, all of the most modern construction, are heated by the Hitchings Co. and The Lord M'g Co.'s systems of Hot Water. There are also 250 Hot Bed Sash, 50,000 Flower Pots, and large packing rooms, potting sheds, wagons, harness, in fact all essentials that go to make up a Complete Floral Establishment.

There is also a comfortable dwelling house of 8 rooms, and large barn and cow stable. A large windmill assures at all times a full supply of city water. While the "plant" here described is on 3½ acres, I will also sell, if desired, an adjoining plot of 6 acres.

For price, terms or more detailed information, please call on, or write to

Groton, Mass.

Groton is a grand old place abounding in beautiful scenery, stately residences and elm shaded avenues, complacent and dignified, as becomes a typical Massachusetts town possessed of a proud history. Groton now claims a new distinction, one of which her old revolutionary heroes never dreamt, but nevertheless worthy of record in these days of horticultural activity. It is the American home of the Lady Campbell violet. What this means only the grower who has felt the full effects of the much dreaded violet disease can fully appreciate. When Mr. H. Huebner announced a couple of years ago that he had found in the new violet a variety that seemed to have the vigor and constitution necessary to withstand the violet disease which was making such havoc among the growers of Marie Louise much interest and considerable incredulity were manifested. To-day the best proof of Mr. Huebner's claims is found in the splendid showing made by the Lady Campbell as seen growing in his houses.

His large house contains between twenty-five hundred and three thousand plants, and they are a sight worth seeing. The plants are big clumps of strong healthy foliage, and they are profusely covered with big long stemmed blooms, many of which come not far from the oft claimed, but seldom attained, size of a silver dollar. The recently noticed trouble known as "curly leaf," in which the edges of the foliage assume a scorched appearance, as though scalded by steam or hot water, manifests itself occasionally through the beds, but of the regulation "violet disease" there appears not a trace, a fact that would be of little importance if it were not that at every trial in the same houses Marie Louise has proved a complete failure.

The single violet, The Czar, is grown here in considerable quantity. Mr. Huebner has, in addition, some twenty varieties of violets, most of them imported, under trial in frames and houses. Carnations are looking very fine, especially such varieties as Scott, Hector, Daybreak and Brutus. Cartledge does poorly, and New Jersey is badly rusted. A boys' seminary is located in Groton. The lads are all sons of wealthy families and are good customers for flowers in a small way. Mr. Huebner has introduced a novel plan in dealing with them which may be of value as a suggestion to retail florists similarly situated. A boy selects any plant as it stands in the bed, such as a carnation or violet, which for a certain price becomes his exclusive property, and he is at liberty to go in and cut the blooms from it as they appear. A tag with the name of the owner is attached to each plant so disposed of, and the plan is evidently very popular judging by the number of tags seen.

PROVIDENCE, R. I.—Mr. Patrick Sweeney's greenhouses were destroyed by fire December 24. Loss about \$4,000.

TRUMBULL, CONN.—The large greenhouses of C. P. Noyes were partially destroyed by fire on the morning of December 24. Many valuable plants were ruined.

TARRYTOWN, N. Y.—Lewis Nash, 74 years old, a gardener employed at Lyndhurst, Helen Gould's summer home at Tarrytown, was instantly killed Saturday night between Irvington and Tarrytown by being struck by a train on the New York Central Railroad while walking on the track.

NEW GANNA "GLARA PELEY"

A seedling from Mme. Crozy, same size flower but broader petals; color, even red, darker than its parent, without yellow edge; very stout stem and broad, waxy green foliage.

Mr. Fred. Kanst, manager of South Park, Chicago, and who was a judge of Cannas at the World's Fair, kindly tried some of my seedling Cannas on the park grounds last summer, and wrote to me in September: "Your Canna No. 1 is really a fine one. I have shown it to several different parties and they all agree that it is very good. If you get a stock of this one you ought to be able to do something with it."

I have not a large stock of it, about 400 dormant roots, I offer half of it to the trade at \$2.00 each or three for \$5.00. It may seem high, but when I think that every one of them will make at least 15 next fall, I wish I could keep them longer. And I make the agreement not to sell any more than these 200 this year without privately notifying the purchasers of this lot.

CASH WITH ORDER.

The roots will be sent by Mail or by Express according to purchaser's choice. No extra charge by mail.

A. PELEY, Fort Lee, Bergen Co., N. J.

Address **PARKS, care American Florist, Chicago.**

THE beautiful and continuous Exhibition of Tropical Plants and Flowers at Short Hills, N. J. is conveniently reached from New York City via D. L. & W. R. R. from foot of Christopher or Barclay Street ferries, and is about an hour's ride. The round trip ticket is 80 cents.

Visitors who are continually arriving from all parts of the country express great surprise and pleasure at the magnitude and completeness of the exhibition contained in the 50 spacious greenhouses, in which are grown in great numbers and luxuriance nearly every variety of plant known to greenhouse cultivation.

Thousands of Orchids may be seen in bloom, and the forest of Tree Ferns, some of the specimens being a thousand years old, and the noteworthy collection of two hundred and thirty varieties of Palms, over a quarter of a million in number, the many houses of old, new and rare Decorative plants, together with the ferneries in which are grown half a million of Ferns, are something visitors will never regret or forget having seen. The public are always welcome, and are never importuned to purchase.

Our plant Catalogue will be issued in February and will be mailed to all patrons.

Foreign Notes.

Among chrysanthemums receiving certificates in England from the National Chrysanthemum Society were Niveus, The Queen, H. L. Sunderbruch and W. G. Newitt.

A most remarkable bi-generic hybrid orchid is *Epilaelia* × *Hardyana*. It was produced by crossing *Epidendrum ciliare* upon *Laelia* aneaps. The habit of the plant is similar to the epidendrum, as is the style of the flower scape. The flowers have sepals and petals of bluish white, tinted with rose on the lower halves; the base of the lip is bluish white, the tips of the side lobes and front lobe rich crimson purple. This is the first known hybrid produced from these genera.

Laelio-Cattleya Decia is one of the newest bi-generic orchids, recently receiving a first-class certificate from the Royal Horticultural Society. It is a cross between *Laelia Perrinii* and *Cattleya Dowiana aurea*. The sepals and petals are rosy lilac, silvery white at base and midrib; the interior of the tube of the lip is pale purple, with white veining, the front portion rich mauve purple. Another unique bi-generic hybrid, also receiving a first-class certificate, is *Phaio-Calanthe Sedeniana*. It is the result of a cross between *Phaius grandifolius* and *Calanthe Veitchii*. The flowers are creamy white tinted with pale rose, borne on a tall spike.

We are informed that at the funeral of President Carnot one Belgian florist sold in Paris blooms of *Odontoglossum crispum* to the value of 68,000 francs (\$13,600).

Serrastylis modesta is a new genus and species of orchid, discovered in 1893, and recently flowered in England. It is said to be near the brassias, and resembles in habit a small *Oncidium sarcodes*. The sepals and petals are reddish, edged with yellow, the lip white, with a few purple streaks. The flowers are arranged in a long, dense, drooping spike.

The annual exhibition of the society of Danish Gardeners was held in the Tivoli Gardens, Copenhagen, last September, and there were 50,000 paid admissions. The Tivoli is a large amusement park within the city to which admission is charged. The special attractions are concerts, comedies, pantomimes, etc., which are free within the gates when no special occasion draws the thousands. The florists of the larger cities were well represented and even the small hamlets had sent in their best. Pot grown plants were quite a feature as well as competitive bedding in the lawn.

The new green flowered chrysanthemum of which mention has been made lately is *Ethel Amsden*, a sport from *Vivian-Morel*. Singularly enough the same sport has appeared almost simultaneously in several widely separated localities.

A new variety of the bow string hemp, *Sansevieria Kirkii*, has been discovered in southeast Africa. According to the *Botanical Magazine* the broad strap-shaped spotted leaves are in tufts, and the peduncle bears a head of white flowers, each with a very long slender tube expanding into a limb, with six narrow reflexed segments about a quarter the length of the tube.

THE GREAT ANTIPEST.

Give the Employees Credit.

Why are section-men who produce prize winners not recognized by the Florist's Club in a public way. It seems to me they should be, at any rate in the cut flower growing branch of the business.

As is well known the popular way on big places is to divide it in sections with a man in each. If the man, through his talents and ability produces flowers which win prizes in competition and command attention, why is he not recognized so as to enable him to advance? If you happen into a show when the flowers for exhibition are being set up and ask who grew them your large place proprietor will throw out his chest and rub the rotundity under it and calmly remark "I did," and proceed to receive the congratulations of the trade. The section-man toddles in after the judges are through and if the coveted blue ribbon is on the stuff he grew who congratulates him? Who gives him credit that he can use? No one, simply because there is no way of making it known to other employers than his, who very seldom does it.

I respectfully submit a suggestion which I think should find favor with section-men and employers alike. Let the Florists' Clubs call the section-man whose stuff wins before it and give him a certificate stating that the stuff for which his employer got a prize was grown in his section. This would not take away the glamor of a victory from his employer, and certainly would draw attention to the section-man's ability.

TO TAKE PLACE OF WIND MILLS

HOT AIR PUMPING ENGINES

A Windmill

Is unreliable because it depends upon the elements for its power; hydraulic rams also depend upon favorable conditions and waste as much water as they secure. Steam pumps require skill and hand pumps demand labor and time. The

DE LAMATER-RIDER OR DE LAMATER-ERICSSON

Hot-Air

Pumping Engines

are especially designed for pumping water, and from shallow streams or any kind of well. They are simple, safe and reliable, require no steam and have no valves. They require very little heat to operate them, and can be arranged for any kind of fuel.

Send for illustrated catalogue to **The DE LAMATER PUMP WORKS, 87 South Fifth Av., NEW YORK, N. Y.**

PAWTUCKET, R. I.—Alonzo Vose has just completed a 100 foot greenhouse.

WORCESTER, MASS.—C. C. Kenyon, formerly with F. S. Platt of New Haven has bought out the retail flower store of N. J. Herrick at 301 Main street.

READING, PA.—The thirty-sixth annual meeting of the State Horticultural Association will be held in this city January 15 and 16. The program has been issued and copies may be had by addressing the secretary, E. B. Engle, Waynesboro, Pa.

ST. JOHN, N. B.—The St. John Horticultural Association is in a very prosperous condition. A large greenhouse has been erected on the public grounds, and two very successful flower shows have been held during the past fall. Mr. C. G. Knott is superintendent and gardener. Horticulture is making rapid strides in this section, and the florist trade shows evidences of great prosperity. The holiday trade was unusually brisk, and the season starts out with most encouraging prospects.

THE CHRISTMAS TRADE.

Reports From All Sections.

Below we print replies to inquiries addressed by us to many different cities as to first, how sales compared with last year; second, how retail prices compared; third, whether supply was equal to demand; fourth, how quality compared with last year; fifth, whether there was any marked increase in the call for any special flower; sixth, whether any interesting peculiarity was noted in the trade this year and not covered by our inquiries. Reports of the trade in most of the larger cities appeared in our last issue.

DELAWARE, O.—Increase of about 35%. Not enough roses and carnations. Increased call for holly, palms and pot plants.

NEW ORLEANS, LA.—Very large increase. Retail prices same as last year. Supply good. Quality fully as good. Increased call for ferns and palms.

LYNN, MASS.—A slight increase. Supply short. Increased call for small palms, ferns and rubbers. Christmas greens were very freely used this year.

EVANSVILLE, IND.—About the same. Retail prices somewhat better. Supply good. Quality about the same as last year. The first and last call was for roses.

WILMINGTON, DEL.—Up to the average. Retail same. Supply short. Quality about same as last year, probably better on carnations and violets. Increased call for fern dishes.

DAVENPORT, IA.—A slight increase. Retail prices about the same as last year. Supply hardly equal to the demand. Owing to cloudy weather quality was not so good as last year.

BLOOMINGTON, ILL.—An increase of about 20%. Retail prices ruled about the same as last year. Supply not quite equal to demand. Quality about as usual at the season. Increased call for carnations.

CLEVELAND, O.—About the same. Retail prices a little lower. Short of colored roses and carnations. Quality about equal to last year, except violets which were better. Roses, carnations and violets were as usual in greatest demand.

MILWAUKEE, WIS.—An increase of about 25%. Retail prices a trifle higher on flowers, about the same on greens. Supply somewhat short. Quality fully equal to last year except on some roses. But few orders were placed in advance.

ELMIRA, N. Y.—About the same. Retail prices lower. Supply not equal to de-

mand. Quality better. Increased call for violets and carnations. Flowers for churches in great demand. Large call for small and medium sized palms and blooming plants.

FT. WAYNE, IND.—Increase of 25%. Retail prices about same as last year. Supply good except roses and carnations. Quality not quite so good. Increased call for roses. No call for bulb stuff. Holly sold well, considering the quality which was poor.

ST. PAUL, MINN.—A very large increase. Retail prices a trifle higher. Supply nearly equal to demand. Quality better. Increased call for violets and carnations. An unusually brisk trade in greens, also in potted plants, such as palms, Harrisii, cyclamens, azaleas and ferns.

PITTSBURG, PA.—An increase of 25%. Retail prices about the same as last year; in some flowers a little lower. Supply was ample with the exception of carnations. Eastern flowers not so good in quality, local stock much superior. An increase in the call for carnations.

KANSAS CITY, Mo.—An increase of 25%. Retail prices much better. Supply just about equal to demand. Quality good. Marked increase in the call for American Beauties, violets and valley. Increased demand for palms, azaleas and all plants in bloom. Business in general much better.

PATERSON, N. J.—Increase of about 10%. Retail prices about same as last year. Supply fully up to demand but sold quite close. Quality fully up to the standard. Increased call for carnations. Very largely increased demand for holly, a good quality of which sold well at good prices.

PEORIA, ILL.—About 25% greater. Retail prices lower, caused by cutting of prices early in the fall. Supply of scarlet carnations was short. Quality much finer, especially carnations. There was a greater demand for holly and pot plants. Bouquets and baskets not called for. Bulb stuff sold well.

TAUNTON, MASS.—Increase of about 10%. Retail prices better. Supply short. Greater call for carnations. Last year, owing to sharp competition, carnations retailed at 35 cents a dozen. This year the price was 50 cents, and 65 cents for Daybreaks. Can't afford to handle any but home grown stock.

YOUNGSTOWN, O.—About the same as last year. Retail prices also ruled about the same. Supply not equal to demand. Quality not so good. Increased call for carnations and cheaper flowers. Cold storage flowers sent to customers from the large cities were practically worthless when exposed to the air.

MINNEAPOLIS, MINN.—Increase of about 15%. Retail prices about same as last year. Bulb stuff was abundant but there were not enough roses and carnations. Quality better. Christmas trade was satisfactory all round, but New Years trade was not up to the standard.

NASHUA, N. H.—An increase of about 25%. Retail prices about the same as last year. Supply a little short. Quality equally as good. More call for carnations and less for roses. The call for palms and ferns was far ahead of last year, and holly was in more demand.

SPRINGFIELD, MASS.—Increase of about 10%. Plenty of flowers except roses. Retail prices about the same as last year. Quality fully as good. More call for medium priced flowers. Greens were abundant with the exception of native lycopodium which the early snows covered up.

RICHMOND, VA.—A very large increase over last year. Retail prices about as usual at the season. Supply was good with the exception of Beauties and violets. Quality better. Increased call for colored flowers both cut and growing plants. Large increased call for American Beauty roses and violets.

DETROIT, MICH.—An increase of 25%. Retail prices about the same in roses, carnations higher. Supply not fully equal to demand. Quality somewhat better, especially carnations. An increased call for violets, one firm retailed 18,000 Christmas. Greater demand for potted plants, palms and blooming plants.

NASHVILLE, TENN.—About the same. Retail prices lower. Supply abundant. Quality not so good. The demand seemed to be for cheap flowers regardless of quality. The prevailing prices on roses was \$1.50 to \$2 a dozen, a very few of excellent quality bringing \$3. Hyacinths and narcissus were abundant at 50 cents a dozen.

NEW HAVEN, CONN.—About the same. Retail prices compared favorably. Supply of carnations and violets not equal to demand. Quality as good as last year. A greater demand for small flowering and other plants such as Chinese primroses, begonias and ferns. Also increased demand for holly and evergreen wreaths, etc.

ROCHESTER, N. Y.—An increase of about 20%. Retail prices about the same as last year, a little less on some flowers. Supply as good though more good roses and colored carnations could have been sold. Quality better than last year. More plants sold than usual; warm weather helped the sale of them. There seems to be more holly sold each year.

DES MOINES, IA.—Very much larger than last year. Retail prices about the same. Supply short, could have sold $\frac{1}{2}$ more roses and carnations. Quality was better than last year. Not so much pickled stock sent in. Increased call for carnations and roses. Violets and bulb stock were not very largely called for. Sales of holly and other greens very much larger than ever before.

TERRE HAUTE, IND.—An increase of about 15%. Retail prices about the same as last year with the exception of Beauties which were higher. Supply equal to demand. Flowers of better quality. Increased call for American Beauties and violets. Trade all came a day before Christmas and there was a larger per cent of cash sales than ever before. More palms were used for presents.

NEW LONDON, CONN.—An increase of 25%. Retail prices about the same as last year. Supply was not equal to demand. Carnations and some roses were scarce and too high in price for this market. Quality was better all round. An increased call for carnations and plants. Palms and flowering plants were in brisk demand; more were sold than ever before, the weather being fine.

PORTLAND, ME.—About the same as last year. Retail prices about 20% lower on some flowers. The supply of flowers was larger than the demand. No perceptible difference in quality except in home grown carnations which were far superior. More call for carnations than for any other flower. Some of the dealers bought heavily in Boston but were left with the stock on hand.

LOUISVILLE, KY.—An increase of about 15%. Retail prices about the same as last year. Supply was equal to the demand; quality better. Increased call for carnations, Beauties and violets. Sold to more people but in smaller amounts than last year, but taken altogether there was an increase of about 15%, but a large proportion had to be charged on the books and was not cash.

NEW BEDFORD, MASS.—An increase of about 25%. Retail prices were about the same as last year though a trifle lower on some things. Supply was short on carnations and violets; quality better than last year. Increased demand for violets and colored carnations, the call being fully double what it was last year. The call for holly and wreaths was good, the quality of the holly was very good this year.

UTICA, N. Y.—Would have been much larger if there had been sufficient home grown stock to supply the demand. Prices at wholesale do not make it pay to buy from the large cities. Retail prices about the same as last year. Supply short on account of facts above noted. Quality about the same. An increased call for pink roses, orchids and violets and pink carnations. Orders were more numerous but smaller.

GRAND RAPIDS, MICH.—About 30% increase. Retail prices somewhat lower. Supply good except carnations and violets, for which there was an increased call. Large quantities of holly were sold but little mistletoe. Green was sold in smaller lots. Needle pines will not sell here. More plants and flowers were sold, fine palms selling so cheap that one could get a nice one for usual price of a dozen roses. This had a tendency to lessen the call for roses.

THE RETAIL TRADE.

The Arrangement of Flowers.

XVI

ROSE BASKETS.

The five illustration of rose baskets we present in this issue comprise part of the exhibit at the recent Chicago show.

The first principles in basket arrangement have been so fully covered in former articles, that we deem it unnecessary to again go over the whole treatment in detail, as to mossing, stemming, etc. These baskets represent what we would term the high grade article, though none of them are extremely large nor necessarily expensive. The best grade of stock that the market afforded was employed in

their make up. Here again we must emphasize the point made before, which is especially applicable to arrangements of long stemmed material without a supporting wire, that is the importance of imbedding the stems firmly in the moss to assure their lasting a reasonable length of time. In our desire to produce an artistic effect, we are too apt to neglect this very important point altogether, and the result is too often a production which though highly appreciated as regards arrangement proves a sore disappointment to the buyer when he finds that the choice roses for which he paid a good round price, are wilted in one short hour.

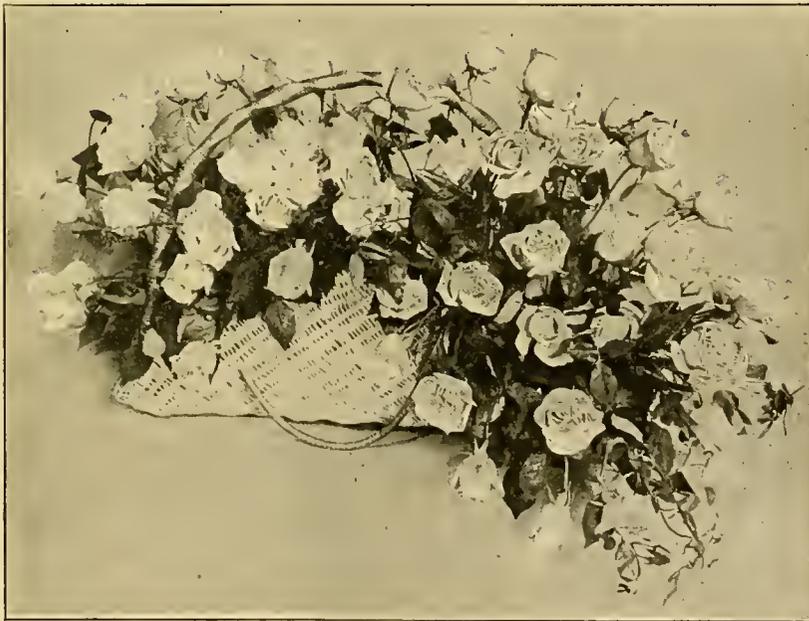

The first illustration shows a medium sized round splint basket with a moderately high handle, the buff tint of the basket harmonizing well with Meteor with which it is filled. No green except the natural foliage is used. Although we are rather partial to a judicious use of adiantum or other suitable foliage in a basket we must always consider the material with which we employ it. In the case of the Meteor rose a better effect probably can be obtained by barring the fern altogether. The stems of these flowers are clothed thickly with foliage closely up to the flower, thus giving us all the green necessary to bring out a desired effect to much better advantage than by adding any foreign material. The stems of the flower also being firm as a rule it lends itself admirably to an arrangement of this kind when no supporting wires are admissible. As no ferns are used, even around the rim of the basket, we should take good care that the flowers are draped well over the edge, though the lower part of the basket, particularly if it be a handsome one, should not be entirely covered up. As to the cost, such a basket at the present price of Meteor at \$15 to \$20 per 100, would be considerable more than the average customer would be willing to pay. But let us figure at the average price of \$6, and we have the cost as follows: 100 Meteors \$6, basket \$1.50, moss, stemming material and ferns to cover moss 50 cents, total \$8. Add your profit and we have say \$15 to \$16 as the selling price.

No. 2 is a white wicker basket with low handle, twisted in shape to form two pockets, the handle running diagonally across. The front pocket is filled with Bride roses arranged so as to project well over the lower rim, the other side is filled with Bridesmaid set somewhat higher and kept within the basket form. As the flowers reach well up to, and some above the handle, this is left undraped as it should be. This basket also is arranged without ferns. As these roses, however, are rather bare of foliage on the upper part of the stem it is well to add (if these can be procured) some branches of blind wood and place between the flowers. The cost would be, say 35 Brides at 5, and 35 Bridesmaid at 6, basket \$1 and incidentals 50 cents, total \$5.85. At retail the basket would be worth \$10 to \$12.

The third illustration shows an entirely different type. This is an oval white willow basket with high handle, filled with about 125 very long stemmed Testouts and Adiantum gracillimum and cuneatum. The handle is draped with about a dozen of the same roses and tied with a pink ribbon. It is not the easiest matter in the world to match a ribbon with a certain shade of flower, indeed it is next to impossible to find the exact shade of pink in a ribbon with the tint of the different pink roses. Nor is it necessary that it should be as long as the tint

FIRST PRIZE. ARRANGED BY P. J. HAUSWIRTH.

SECOND PRIZE. ARRANGED J. M. GASSER.
ROSE BASKETS AT THE CHICAGO EXHIBITION.

harmonizes with the flower. Often the effect is really much better if the ribbon is several shades either darker or lighter than the flowers. If you have an eye to color effect you won't go amiss; if you have not, better let the ribbon alone. The wrong shade of ribbon is simply killing the effect of the best arrangement that was ever made. This basket might be duplicated at the cost of say \$11.50 to \$12; 125 roses at 6, \$7.50, basket, moss, etc., \$1.50, 50 adiantum 50 cents, 3 yards

ribbon at 50 cents \$1.50. Selling price \$22 to \$24.

No. 4 is a very pretty arrangement of Brides and Bridesmaid in a square basket with medium high handle, on which a bunch of the same roses is tied with a cream tinted ribbon. Adiantum is used in this arrangement with very fine effect. The Bride rose in particular shows off to good advantage in connection with adiantum. First cost: 75 roses, let us say at 6, \$4.50, basket and stemming

material \$1.75, fern 50 cents, 3 yards ribbon \$1.50, total \$7.75; at retail \$15.

The last illustration is a very showy and handsome basket of a style which we term a "Theatre basket." It is a typical French opera basket designed principally for show. The effect of the arrangement as is plainly shown in our illustration is superb, the whole make up showing good taste and skill. The basket is filled with Bride roses with their own foliage while the handle is trimmed with a massive bunch of Meteor and Mermets at the top with a graceful spray of Perles on one side and Brides on the other, reaching down to the bottom, tied with cream tinted ribbon. Cost: say 125 roses at 5, \$6.25, basket, etc., \$1.50, ribbons \$1.50, total \$9.25; retail \$18 to \$20.

Violets.

Violets are now in season. Like the rose the violet is always welcome and always in demand. It is safe to say this condition will endure for all time, unless indeed we should by our own fault make this little favorite unpopular to the general public by offering it for sale in an objectionable condition, such as alas! is too often the case at the present day. The violet is not what might be termed a decorative flower, its chief charm being its fragrance, and when the latter is lacking the flower is almost worthless. The extreme high prices which have prevailed for a number of years during the fall and winter months have kept it practically out of the reach of the mass of the people and more is the pity. But even the rich will object to paying a dollar for a bunch of 25 blooms, no matter how fine these may look, if devoid of fragrance. How to manage the stock to preserve that fragrance as long as possible must therefore be considered as one of the most vital points. The grower first, the commission dealer next, and last, but not least, the retail florist, should study this question thoroughly.

We know that the violet is apt to take up and hold longer even than their own fragrance the odors of articles with which it comes in close contact. Thus we often find in freshly pulled flowers that peculiar odor arising from decayed wood. For the cause you may not have to look further than the house the flowers are grown in; the rotten benches are plainly in evidence. Some growers use a top dressing of light manures; the result so far as the odor of the flower is concerned is often disastrous. It should follow therefore, aside from all other considerations, that the air in the violet house must be pure and sweet. It is a well known fact that on a bright sunny day, with the ventilators open, the violet emits a much stronger fragrance than in damp and cloudy weather and the blooms picked at such a time will retain their fragrance for a much longer period. But we don't have the benefit of sunshine every day to aid us and the violets have to be gathered when our trade demands them.

If the houses are clean and sweet the flowers will be fragrant when picked at the proper time, and that is when the blooms are fully expanded. A partially developed flower is not as sweet as the former and will not retain its odor as long. As the picking and bunching of violets take time and the stock is required on the market at an early hour in the morning, it is generally found necessary to gather the stock the evening before. There is no objection to such practice if the blooms are treated properly before

shipping. *Avoid a chilling temperature always* should be a maxim lived up to from the time the blooms are gathered until they reach the consumer, since it is a well known fact that the odor will depart in a few hours if the flowers are kept in a cold place. If the stems are placed in water and kept in a temperature of nearly the same degree as that maintained in the house where they were grown the flowers will be found sweet the next morning and will retain their fragrance for that day at least.

The commission dealer is the next to handle them. If the stock passes at once into the hands of the retailer well and good, but that left over from the morning's sales is generally placed in the ice box to "keep it fresh," which is fatal to the preservation of the fragrance. When late in the day you buy your stock it is practically worthless and all for want of a little judicious care. To the commission men we would say: *Keep the violet out of the refrigerator*, and the retail florist must observe the same rule.

There are various modes of keeping the stock fresh and sweet. Some florists wrap each bunch in tissue paper and then place the stems in water and keep them on the sales counter. This is all right but it necessitates the unwrapping of each bunch for the inspection of a prospective buyer, which consumes too much time. One of the best methods, perhaps, which is practiced by a number of dealers, is to lay the bunches in a box, placing a sheet of damp tissue on the bottom and another on top, closing the lid tightly. This box, if kept on the counter to have it handy, should be neat in appearance and kept scrupulously clean inside; tin or galvanized iron answers best. Paper boxes are objectionable for several reasons. In the first place the dampness renders them unfit for use any length of time, and the flowers are apt to absorb an objectionable odor arising from the glue and paste used in making the box.

As has been stated in a previous article, fresh violets which have lost their fragrance by chilling might be treated by placing the stems in warm water and kept for a few hours in a warm atmosphere, under which treatment the flowers often regain a partial degree of their natural fragrance; but such experiments are not always successful. How often have we heard a remark of the dealer confessing his own ignorance, if nothing worse. Customer: "Are these violets fresh? They haven't a particle of odor." Florist: "Why, you see, madam, the flowers have just been taken out of the cold ice box, but just as soon as you place them in a warm temperature they will again become delightfully sweet." In the first place are you sure of it? And if the buyer is an intelligent person won't he or she argue: "If you know that the cold atmosphere in your ice box robs the flower of its main value why do you place it there? And if you are sure the flowers will regain their natural fragrance under the conditions you suggest why don't you try that experiment yourself before you offer them for sale?" Besides the buyer may not care to carry her purchase home and wait for several hours for the transformation. The fragrance is wanted *now*, when you make your sale.

Of the daily supply of violets probably one-half reaches the consumer entirely destitute of fragrance. But this is not the worst, bad as it may appear. Stock is offered at the wholesale markets, and too often retailed also, the odor of which suggests the barnyard in a painful degree. To sell such stuff is simply criminal.

There is one other offense worse than this, and that is to try to doctor such material with violet perfume. B.

Carnation Notes.

Many of the boys are thinking now of starting into business on their own hook. Well, boys, that is all right if you have pluck enough to start, but be sure to begin on the right line and whatever you undertake, do it well and stick to it. Men have made fortunes by sticking to the business into which they first entered but they followed the advice which our Chauncey gave to a college graduating class, "stick, dig and save."

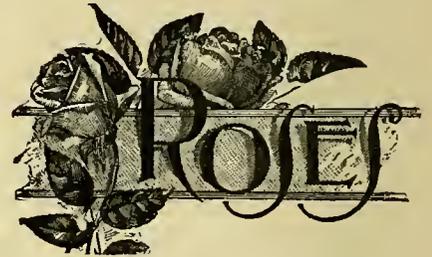

Boys, let whatever you undertake be a specialty; in the majority of cases you must begin in a moderate way and if you are growing for the wholesale market you must have enough of one article to make it an object for the commission dealer to handle; if you grow a miscellaneous lot of stuff and only a little of a sort, no one wants it and you will suffer. I have heard some say that growing for a retail or local trade is not a specialty, but this is a mistake, do not undertake this line unless you have had some experience and it must have been thorough at that. Then again some say that for a local trade you must not confine yourself to one class of plants; this is not a fact, if you are in the neighborhood of a large town. Buyers will go where they can get the finest flowers. The flower buyers in my vicinity are paying for carnations nearly double what they could get fair stock for. If you have and will use a little judgment in advertising or getting your goods before the people you will soon have the best of the trade. There is no better stock for you to handle than carnations providing you don't get the big head and think that the only thing for a full grown man to raise is roses or orchids. Try all the new kinds if you will but twelve of a sort will fill the bill and will serve every purpose especially when you remember that every plant takes up one square foot of bench room. Grow for your main crop varieties that are recognized as standard sorts and such as you know will do well in your vicinity. The following do well in nearly every locality: Scott and Daybreak for pinks; Portia, red; McGowan or Silver Spray, whites; about yellow it is a question, Buttercup puzzles nine growers out of ten, so do not use it; Bouton d'Or is a good one, in fact it is all in all the best of its class yet on the market; Goldfinch is very good but the flowers are not quite as large as desired; it is, however a more profuse bloomer than any yellow we have seen. For a crimson get Meteor; it is a novelty of this year and comes high but when the quality is taken into consideration it is cheap. I saw it growing with the originator, Fred Dorner and The Cottage Gardens have it in magnificent shape; as it is now bringing eight dollars in the New York market it will pay to grow; it is the best all round crimson yet introduced.

Boys, above all things leave seedling raising alone until you can afford to undertake it as a pastime or hobby; it is expensive and very uncertain and when you con-

sider that not one per cent. of the plants raised prove worthy of disseminating it will show you very conclusively that the specialist in this line has a great advantage over a beginner.

Make up your mind that if you ever are successful it must come through harder work than ever you did for your employer; the hours must never be counted, your work will never be in such shape that you will have leisure time. You must have your fun but never neglect business for pleasure and the time will come when you can go with the rest who have had the same hard row to hoe. Have your broom in a handy place, for cleanliness is next to having the best flowers in the market; when ever you see very fine flowers you will find clean surroundings. There are exceptions to this rule I am told but they never have come to my notice.

CHARLES H. ALLEN.

Small Spots on Rose Foliage.

We send a few leaves taken from a plant in our rose house. You will notice that both surfaces are covered with small black spots. Can you tell us what they are and what caused them? Even the flowers are covered. Bride buds look as if pepper had been sprinkled over them.

The way we account for it is this. About a week ago we remulched the beds with 1½-inches of pure cow manure, which was rather fresh. That is, it was manure that had been dropped since early last spring. Upon the manure, in time, appeared a light fungus of white appearance. Upon stirring the manure, or upon syringing, this fungus appears to explode and cast up the matter that makes the black spots. Upon stirring with one hand and holding the other 18 to 20 inches above the bed you can feel the particles fly up and attach themselves to your hand. We do not know whether the spots will result in any further harm than disfiguring the flowers and foliage. K.

Your surmise as to the manure being the cause of the trouble is correct. Fresh manure will always cause it when the atmosphere of the house is moist or confined. After a while the fungus will pass off and will not trouble you further, but in the meantime your flowers will be damaged. In all my notes regarding the mulching of roses I have always recommended *well decomposed* manure, and put on in light quantities each time. This was to avoid any such trouble as you now have.

The best thing to do now is to make a weak solution of lime water, say 10 pounds of fresh lime, thoroughly dilute it in 50 gallons of water and moisten the whole surface of the mulching through. It will destroy the fungus that you have, now growing so abundantly in the manure, and will prevent the trouble spreading or increasing, and after the present crop of flowers is cut I do not think you will have any more trouble with it. It is always best to avoid using fresh manure if possible and certainly if compelled to do so use only a very thin mulching each time. JOHN N. MAY.

THIRD PRIZE. ARRANGED BY W. J. SMYTH.
ROSE BASKETS AT THE CHICAGO EXHIBITION.

Miscellaneous Seasonable Hints.

The New Year is somewhat of a turning point, or at least a large mile stone, in our floricultural operations and without further remarks I shall endeavor to remind you of several things which of necessity will be very old to most readers, but most likely a reminder to a few.

With the large sale of plants which all retailers have during the holidays you will now have room to spread out many things needing room, as well as bring in from the frames crops for Easter. Before mentioning anything that now needs attention, don't forget at this time to make a memorandum on paper as well as on brain of what you were short of this Christmas and be prepared in good season either by seeds or cuttings or bulbs as the case may be to have an abundant supply for next year.

Save all the poinsettias you can and lay them on their sides under a dry warm bench where no drip will reach them, or if you have a warm shed stand them up in a corner, they are best served by being perfectly dry both at root and branch for the next three months.

Don't forget to save a few old plants of

Stevia serratifolia. Cut them down to within a few inches of the pot and stand in some light cool corner of your houses, no matter how cool so long as no frost touches them. Don't be in a hurry to propagate them; they are rapid growers like most of their kind and if cuttings are put in the sand in March it is plenty of time. Some may laugh at this cheap plant, particularly specialists, but for the retailer it comes in very useful; it helps out wonderfully on many occasions.

You will be sure to have a few plants of *Linum trigynum* left over. When they are entirely out of flower cut them back to within 7 or 8 inches of the pot, keep a little warmer than they flowered in and well syringed, and in a few weeks you will get plenty of cuttings which root very readily. As far as I have noticed I am about the only commercial florist who has been advocating the growing of this plant. Last year I grew but 2 or 3 plants giving them a good test in my own dwelling house; it proved so entirely satisfactory that I felt warranted in advising my brother florists to grow it. I now assert once more it is a good house plant, and what is greatly in its favor it flowers exactly on time for the holidays. It drops

its flowers 'tis true, but for every flower that drops two will open and the plants covered for weeks with its large bright, yellow blossoms. It rather seems to like the dry atmosphere of a living room, but is a great feeder and must never be allowed to want for water.

Once more look well after your azaleas. It is well to have a few coming along all the time, but the great bulk of them are more profitable for Easter. Give them more room now and when standing them over, look out for the leaf growth which starts at the base of the flower bud. If you want to sell them this spring you must rub that growth off or that will take the lead and the flower buds will never develop. Almost all (perhaps all) our azaleas are imported from Europe and in the main wonderfully well grown for the price. It pays the average florist to dispose of his plants the first year. Watch out for dates and get them right for Easter. The azalea will stand a very low temperature (even under some conditions a slight freeze) so you can retard them at will. Cut off those long prominent growths, they are blind and add nothing to the beauty of the plant.

Another leading article for Easter is the Bermuda and longiflorum lily. Constant vigilance will be well rewarded when bestowed on these important plants. No man living can put them in a house and say they will be in flower at Easter. Many times perhaps you will have to move them round from one temperature to another and it is time well spent. Even in a batch of plants potted at the same time and the same grade of bulbs they won't all flower at the same time, so a constant watch and moving is necessary. Continual and regular fumigation is absolutely necessary, and in addition to that let a boy go over the plants once a week with a small syringe and squirt a little weak tobacco water down into the heart of the young leaves. Aphis will get there and in spite of frequent fumigating will get in their deadly work which later accounts for the crippled buds.

If you force a few lilacs bring them in at intervals.

They force easily in a night temperature of 60° and a shaded house. If you have not a palm house then put some cheese cloth or some such material over them. Don't bring in your crop for any special occasion before 6 weeks of the time when you want them.

It is well now to bring in your *Spiræa Japonica* (astilbe). They should have been potted and in a cold frame six weeks ago and now be all the better for it. Start them in a moderate temperature and if you are crowded for room, under the benches is good enough for a few weeks or until they begin to make leaves. Plenty of water and no tobacco smoke are the only requisites to grow *spiræa* well.

Don't crowd your cypripis; they are easily injured when allowed to stand touching and will lose their bottom leaves. Watch out to keep them back in flowering; they pay better at Easter than any other time and no harm will be done by keeping them in a temperature but a few degrees above freezing.

If you force any hydrangeas for Easter it is time to start them. For early forcing choose those plants that have ripened their wood the most, start in a night temperature of 55° and slowly increase it; when the flower bud is visible you can raise it to 65°, and higher the last few weeks if necessary. There are now so many fine plants grown for the Easter trade that I scarcely see where we need hydrangeas, yet there is room always for

a few. The balance of your stock can be left under a cool bench till March 1, giving them only sufficient water to prevent the stems shrivelling. Those started early in March will bloom middle and end of May, when they are in great demand.

There are not many seeds to sow just now. If you have not yet sown cyclamen do so at once. If you grow *Centaurea gymnocarpa* it should be sown early in January.

Those who were fortunate enough to depend on cold storage valley for holiday trade had some flowers but those who depended on new stock had poor results, for there was so little need of firing before Christmas that there was a sad lack of heat in the sand. Now real winter is here you can get good results; a batch of the new stock should be regularly put in at least once a week.

You can now bring in a large batch of the best kinds of tulips as well as Von Sion. For the next 6 or 7 weeks to do them well they will want a good shade and a continuous temperature of 70°; without the shade your stems will be short. Don't attempt to force any of the double varieties for two months to come. La Reine, Vermilion Brilliant, Chrysolora, Yellow Prince, Keizers Kroon, Prosperpine and White Pottebakker, will now flower well and by the end of the month will be in grand form and sell well.

If you potted any Dutch hyacinths early and they are now well rooted you can bring a few in to force, and keep up a succession by bringing in a few every week. As the season advances they will require much less time to flower.

W. SCOTT.

Chrysanthemum Society of America.

Below we present an alphabetically arranged list of the new chrysanthemums submitted to the committees of the Chrysanthemum Society of America during 1894, with awards noted, where given, and the committees' classification and description. "Cert." is used as an abbreviation of certificate. Of the 66 varieties submitted for judgment 28 were recommended for certificates, further trial was advised for 14, while the remaining 24 were not considered as worthy of even further trial.

Allamanda (E. G. Hill & Co.). Chicago, Oct. 20. "Reflexed yellow."
Cincinnati, Oct. 20. "Type of Yellow Queen, but inferior as to texture, form and size."
Amaranth (F. Dornier & Son). Chicago, Nov. 17. Cert. "Reflexed Jap. White, shaded and lined with amaranth. Very high built. A pleasing color. Great substance. Good form. Stem and foliage good."
Arlington (Chas. Bird). New York, Nov. 10. "Creamy white incurved Jap. Deficient in texture of petals, showing eye badly; also lacks in foliage."
Arriere (F. Dornier & Son). Chicago, Nov. 24. Cert. "Bright yellow with brown shadings. The combination of the two colors gives a light bronze effect."
Baby Charles (Wm. Anderson). New York, Nov. 10. "Yellow reflexed Jap. Resembles Golden Wedding, a little lighter in color, but not so good."
Bird, Lettie (Chas. Bird). New York, Oct. 20. "Reflexed Jap. Yellow. Resembles Pres. Hyde. Medium size."

Bird, Sallie (Chas. Bird). New York, Oct. 20. "Reflexed Jap. White, yellow center; small."
Black, Miss Louise D. (E. G. Hill & Co.). Philadelphia, Nov. 10. Cert. "Deep bright yellow Chinese incurved. An improved Mrs. L. C. Madeira. Has a stout erect stem; much better in every way."
Bloodgood, Helen (T. H. Spaulding). New York, Nov. 10. Cert. "Clear bright pink incurved Jap. Good stem and fair foliage. Resembles Challenge in build, but has narrower petals. A grand flower."
Philadelphia, Nov. 10. Cert. "Clear pink incurved Jap. A very pretty bloom."
Bock, Betty (Theo. Bock). Cincinnati, Nov. 10. Further trial advised. "Pink incurved Jap. Resembles Ada Spaulding in form and color, but has greater petalage. Blooms shown were poorly finished."
Brigand (T. H. Spaulding). New York, Nov. 17. "Crimson Jap. Resembles Geo. W. Childs, but no improvement. Good full flower, good stem and foliage."
Campbell, Mrs. Jas. E. (Theo. Bock). Cincinnati, Nov. 10. Further trial advised. "Blush pink incurved Jap. Size and color too irregular to warrant an opinion."
Chipeta (N. Smith & Son). Chicago, Nov. 17. "Buff incurved Jap. An immense flower; shade of vanilla paper; of great substance, lacking a good color effect only."
Columbine (P. D. Hatfield). Boston, Oct. 20. Further trial advised. "Incurved Jap. Face of petal light red, reverse bronzy yellow. This is not sufficiently distinct from many others in this class, unless it may be its earliness; stem weak on crown and stiff on terminals; foliage good."
Dean, Helen (T. H. Spaulding). New York, Oct. 20. "Incurved Jap. yellow. Resembles Cannell. Good stem and foliage, but lacking in color."
Debutante, The (R. Witterstaetter). Chicago, Oct. 20. Further trial advised. "Jap. incurved. White. Not far enough developed."
Dugdale, John (T. H. Spaulding). New York, Nov. 10. "Crimson reflexed Jap. Resembles Geo. W. Childs, but not so good in either color or build."
Durango (N. Smith & Son). Boston, Nov. 10. Further trial advised. "Reddish brown tipped yellow. Stem strong and foliage good. Petals very broad and flat; good substance. Flowers considerably bruised when unpacked."
Egyptian, The (E. G. Hill & Co.). Philadelphia, Nov. 17. Red. Further trial advised. "Form good. Beautiful in color, and would be popular."
Ellerslie (T. H. Spaulding). Philadelphia, Nov. 10. Further trial advised. "White Jap. Full to the center. Graceful in form, but rather too weak in stem."
Falconer, Jeannie (T. H. Spaulding). New York, Nov. 10. Cert. "Canary incurved Jap. Resembles Emma Hitzeroth in color; flower higher built; good stiff stem, but a little deficient in foliage."
Ferris, Dr. Randolph (T. H. Spaulding). New York, Nov. 10. "Flesh pink reflexed Jap. Good stiff stem, foliage and substance of flowers good."
Gold Fever (E. G. Hill & Co.). Philadelphia, Nov. 17. Cert. "Yellow Chinese. Flower larger than Mrs. L. C. Madeira, which it resembles, and has better stem."
Harris, Grace (T. H. Spaulding). New York, Nov. 17. "White Chinese incurved. Good stem, fair foliage. Improvement on Mrs. Robt. Craig. A grand addition to this class. Almost identical with Miss G. Spaulding, as shown on the 10th inst."
Hatfield, Mrs. T. D. (T. D. Hatfield). Boston, Oct. 20. Cert. "Incurved lemon yellow. This variety is of fine form, with high center; foliage is ample and well up to the flower; stem straight and stiff. At this date flower is about two-thirds developed."
Hayes, Francis B. (N. F. Comley). Boston, Nov. 17. Cert. "Deep rose pink incurved Jap. This variety is the result of a cross between Ada Spaulding and Louis Boehmer and is a flower of great substance, and beautiful in form. It is dwarf in habit, with very fine foliage which is well up to the flower. Stem very stout. Petals show a few glandular hairs. Certificated by Mass. Hort. Society."
Her Majesty (E. G. Hill & Co.). Cincinnati, Oct. 20. "Jap. incurved. Very pale pink. Resembles Mrs. E. G. Hill in form, but far inferior in color."
Chicago, Oct. 20. Cert. "Jap. incurved. Pale salmon pink. This, while but a few shades different from Mrs. Hill, is, if it remains constant, a much better color, especially for commercial purposes. Sport from Mrs. E. G. Hill."
Hole, Dean (J. N. May). Philadelphia, Nov. 10. Cert. "White, beautifully flushed with delicate pink. Very large and of fine form. Japanese."
Hurley, Mrs. Wm. H. (Hugh Graham). Philadelphia, Oct. 20. Cert. "Jap. Bronze or old gold. The flowers are graceful in form; a shade lighter and somewhat similar to Source d'Or; foliage very handsome. Desirable on account of earliness. About 8 inches in diameter."
Johnson, Miss M. M. (E. G. Hill & Co.). Cincinnati, Oct. 20. Cert. "Jap. incurved yellow. The six blooms shown were perfect specimens, and we think it a valuable acquisition. We were unanimous in this decision."
Chicago, Oct. 20. Cert. "Jap. incurved yellow. A fine early commercial variety."
Kemble, Mrs. Wm. H. (Chas. W. Cox). Philadelphia, Nov. 24. Cert. "This is a very distinct and beautiful variety. The flowers are very full, the petals somewhat resembling those of Elkshorn. A valuable late variety."
Kupferle, Rosa (R. Witterstaetter). Chicago, Oct. 20. Further trial advised. "Japanese magenta pink. Not fully developed."
Lager, J. E. (Pitcher & Manida). New York, Oct. 20. Cert. "Jap. reflexed. Bright yellow. Resembling J. H. White in build, stem and foliage."
Nada The Lily (R. Gardner). New York, Oct. 20. "Reflexed Jap. White. Resembling Pandanus in form; much larger; long twisted petal; full; good stem and foliage."
Neal, Mrs. Jas. E. (Theo. Bock). Cincinnati, Nov. 10. "Dull wine color. No good whatever."
Nemesis (J. N. May). New York, Oct. 20. "Reflexed Jap. white. Good stem and foliage." [The name "Nemesis" has already been used. It is a recent introduction by E. Lacroix and is described as "Jap.; delicate rose, pointed, striped white."—Ed. A. F.]
Neva (N. Smith & Son). Philadelphia, Nov. 10. Further trial advised. "White suffused with light pink. Jap. Loose flower; stem rather weak. Arrived in poor condition."
Newbold, Miss Margaret (R. G. Carey). Philadelphia, Nov. 10. Cert. "Delicate pink incurved Jap. Mermaid type, better color. Good stout stem."
New York (T. H. Spaulding). New York, Nov. 17. Cert. "White suffused lemon and bluish. Incurved Jap. Bold massive flower 6½ inches in diameter and 12 inches over. Fair stem and foliage, style of Edward Hatch." Also certificated at Philadelphia.
Oakshade (R. G. Carey). Philadelphia, Nov. 10. Cert. "Purplish pink. Very distinct and beautiful form. Petals very peculiar; somewhat resembles a salvia floret."
O'Farrell, Elma (F. Dornier & Son). Chicago, Nov. 24. Cert. "Deep rose pink reflexed. A new color in the Vivand-Morel class."
Opal (E. G. Hill & Co.). Chicago, Oct. 20. Further trial advised. "Jap. Magenta pink. Not developed."
Parker, Mrs. M. R., Jr. (T. H. Spaulding). New York, Oct. 20. Cert. "Incurved Jap. Lilac pink, silvery reverse. Bold flower, full and solid. Strong stem and foliage."
Parting Guest (T. H. Spaulding). New York, Nov. 24. "Lower half of flower rose, upper half white. Incurved Jap. Good stem and foliage. Flower medium size, very attractive; unique."
Philadelphia (Hugh Graham). Philadelphia, Nov. 1. Cert. "An entirely new type in coloring and in form of petal or floret, and in the general contour of the flower, though it is very nearly globular as a whole. It is the greatest step onward that we have had among chrysanthemums for many a day. In color it is white, illuminated with a charming shade of lemon yellow, giving it light and life never before noticed in any flower. The petals are similar in formation to a canoe with the prow incurving, similar to a parrot's bill. The committee recommend the award of the highest honors in the gift of the Chrysanthemum Society of America."
Rand, Mrs. W. H. (J. C. Vaughan). Chicago, Nov. 10. Cert. "Orange yellow reflexed Jap. Long interlacing petals. Very graceful and good substance."
Reynolds, Maud D. (T. H. Spaulding). New York, Nov. 17. "Bright canary reflexed Jap. Fair flower, good stem, foliage deficient. No improvement on existing varieties."
Rieman, Henry W. (E. G. Hill & Co.). Philadelphia, Nov. 17. Cert. "Deep yellow Chinese. A superb variety. Should rank in the very first class."
Riverside (Riverside Floral Co.). Chicago, Nov. 10. "Lemon yellow reflexed Jap. So poorly grown we cannot consider it."
St. Louis (A. Jablonsky). Chicago, Nov. 10. "Yellow shaded buff. Jap. Sport from Mrs. Frank Thompson. Of no value."
Sinaloa (N. Smith & Son). Philadelphia, Nov. 10. Further trial advised. "Light pink incurved Jap. This is a very pretty flower, but is rather undersized."
Boston, Nov. 10. Further trial advised. "White with pearly tint. Inc. Jap. This variety is very full and beautiful in form, with fine stem and good foliage, but as shown lacks size. Arrived in poor condition."
Smith, Edith (T. H. Spaulding). New York, Oct. 20. Further trial advised. "Full large flower. Good stem and foliage."
Spaulding, Miss G. (T. H. Spaulding). New York, Nov. 10. Cert. "White Chinese incurved. Resembles Mrs. Robt. Craig, but is larger. Good stem and foliage. A grand flower for a Chinese."
Boston, Nov. 10. Further trial advised. "Creamy white Jap. incurved. A remarkable full and deep flower, with very strong stem and good foliage, but lacks in size of bloom

nat, Oct. 20. Cert. "Jap. incurved yellow. The six blooms shown were perfect specimens, and we think it a valuable acquisition. We were unanimous in this decision."
Chicago, Oct. 20. Cert. "Jap. incurved yellow. A fine early commercial variety."
Kemble, Mrs. Wm. H. (Chas. W. Cox). Philadelphia, Nov. 24. Cert. "This is a very distinct and beautiful variety. The flowers are very full, the petals somewhat resembling those of Elkshorn. A valuable late variety."
Kupferle, Rosa (R. Witterstaetter). Chicago, Oct. 20. Further trial advised. "Japanese magenta pink. Not fully developed."
Lager, J. E. (Pitcher & Manida). New York, Oct. 20. Cert. "Jap. reflexed. Bright yellow. Resembling J. H. White in build, stem and foliage."
Nada The Lily (R. Gardner). New York, Oct. 20. "Reflexed Jap. White. Resembling Pandanus in form; much larger; long twisted petal; full; good stem and foliage."
Neal, Mrs. Jas. E. (Theo. Bock). Cincinnati, Nov. 10. "Dull wine color. No good whatever."
Nemesis (J. N. May). New York, Oct. 20. "Reflexed Jap. white. Good stem and foliage." [The name "Nemesis" has already been used. It is a recent introduction by E. Lacroix and is described as "Jap.; delicate rose, pointed, striped white."—Ed. A. F.]
Neva (N. Smith & Son). Philadelphia, Nov. 10. Further trial advised. "White suffused with light pink. Jap. Loose flower; stem rather weak. Arrived in poor condition."

St. Louis (A. Jablonsky). Chicago, Nov. 10. "Yellow shaded buff. Jap. Sport from Mrs. Frank Thompson. Of no value."
Sinaloa (N. Smith & Son). Philadelphia, Nov. 10. Further trial advised. "Light pink incurved Jap. This is a very pretty flower, but is rather undersized."
Boston, Nov. 10. Further trial advised. "White with pearly tint. Inc. Jap. This variety is very full and beautiful in form, with fine stem and good foliage, but as shown lacks size. Arrived in poor condition."
Smith, Edith (T. H. Spaulding). New York, Oct. 20. Further trial advised. "Full large flower. Good stem and foliage."
Spaulding, Miss G. (T. H. Spaulding). New York, Nov. 10. Cert. "White Chinese incurved. Resembles Mrs. Robt. Craig, but is larger. Good stem and foliage. A grand flower for a Chinese."
Boston, Nov. 10. Further trial advised. "Creamy white Jap. incurved. A remarkable full and deep flower, with very strong stem and good foliage, but lacks in size of bloom

ARRANGED BY J. M. GASSER.
ROSE BASKETS AT THE CHICAGO EXHIBITION.

Resembles Mrs. Rob't Craig, and in some ways Mrs. T. H. Spaulding. We would recommend a more distinctive name, as there is already a Miss Gladys Spaulding, and several other Spauldings.

Philadelphia, Nov. 10. Cert. "An improved Mrs. Rob't Craig. An exceedingly well built flower. A charming variety."

Sunrise (J. N. May). New York, Oct. 20. Further trial advised. "Jap. Mahogany red, reverse old gold. Large flower. Good stem and foliage. Earliest of the color."

Sunshine (E. G. Hill & Co.). Philadelphia, Nov. 17. Further trial advised. "Light yellow Jap. Good form, but rather undersized." [Sunshine is the name of a variety introduced last year by Owen. It is described as "Jap. yellow, large petals, early."—Ed. A. F.]

Tippecanoe (F. Dörner & Son). Chicago, Nov. 17. Cert. "Inc. Jap. Pale reddish terra cotta, reverse satiny straw color inclined to buff. Has a changeable effect difficult to describe, but novel and charming in color. Half globular."

Trotter, Mrs. Edw. H. (R. G. Carey). Philadelphia, Nov. 10. Cert. "Pure white reflexed Jap. A well built bloom of great solidity; stout stems. Should make a first-class commercial variety."

Troy, J. H. (Pitcher & Manda). New York, Oct. 20. Cert. "Incurved Jap. White shaded canary. Large, full, bold flower. Strong stem and foliage."

Venus de Medici (J. N. May). New York, Oct. 20. "Reflexed Jap. Dull lilac pink."

Walz, Ella (Fred. S. Walz). Boston, Oct. 20. "Jap. Creamy white. Not sufficiently distinct from Marie Louise, and not as good as Mme. LaCroix. Poor substance; stems stiff; foliage good."

Philadelphia, Oct. 20. Further trial advised. "A promising variety, its chief merit being earliness."

New York, Oct. 20. "Jap. white. Arrived in poor condition."

Chicago, Oct. 20. Not considered.

Walz, Fred (Theo. Beck). Cincinnati, Nov. 10. Cert. "Lilac pink incurved Jap. Form perfect; full to the center; petals boat shaped, lower ones falling to the stem forming a ball. Good for variety."

Weller, Sam. (Chas. Bird). New York, Nov. 16. "Lilac purple with silvery white reverse. Inc. Jap. Resembles Mrs. Geo. West, but not so good."

Wentworth, Mrs. Moses J. (J. C. Vaughan). Chicago, Nov. 10. "Yellow Jap. Style of Lincoln, but not as large. More globular in form, a fine flower of great substance, but not enough in advance of existing varieties to warrant a certificate."

White Cloud (E. G. Hill & Co.). Cincinnati, Oct. 20. "Creamy white. Type of Mrs. Langtry. No improvement except in earliness."

Wiedersheim, Mrs. T. E. (Hugh Graham). Philadelphia, Oct. 20. Cert. "Jap. Very light delicate pink, resembling Daybreak carnation. Somewhat globular in form; good stiff stem; fine foliage; dwarf grower; very full; excellent substance. Very desirable on account of its earliness. About 6 inches in diameter."

Chrysanthemum Names.

The following correspondence is self explanatory:

Dec. 15, 1894.

MR. T. H. SPAULDING, Orange, N. J.

Dear Sir:—We are compiling a resume of the work of the Chrysanthemum Society of America for 1894, and in documents received from the secretary of the society we note that one variety exhibited by you at New York November 10, and which received a certificate, is given as Mrs. G. Spaulding. From other sources we have received it as Miss G. Spaulding. We understand that there is also a Gladys Spaulding. Will you kindly advise us as to the exact name of the variety that received a certificate at New York November 10, and also whether Miss G. Spaulding and Gladys Spaulding are the same or not, and thereby oblige Yours very truly,

AMERICAN FLORIST CO.

JERSEY CITY, N. J., Dec. 20, 1894.

AMERICAN FLORIST CO., Chicago, Ill.

Gentlemen:—I have been absent for a few days, and on returning find yours of the 15th instant, and in reply would state:

I propose calling my new chrysanthemum Miss

Gladys Spaulding. I am well aware that in 1888 an anemone variety was sent out under above name, but as there is not a plant of it in existence on this side of the ocean, and I doubt if there is more than one or two parties in England who have it, thereby making it practically extinct, there can be no harm done to anyone, as the general public are not conversant with such fine lines or discriminations as regards names, and those that are well posted are aware that the old variety is practically extinct. These same facts would apply to at least fifty per cent of the names as published in your directory, and I can see no harm in having them duplicated, and I can see no harm and descriptions as given by you are of plants that were never distributed, and of some that were distributed but a very, very limited number were ever sent out, and in many cases such distribution occurred six or eight years since.

I also doubt, if a reward was offered for 50 per cent of the names above mentioned, if a true plant of each could be found.

Under such circumstances I can see no harm in reviving a name, when its predecessor is practically extinct.

I believe Smith this year has named one of his set Juno, and if I am not mistaken, there was a Juno distributed in either '88 or '89.

Trusting this may be satisfactory, I remain,
Yours respectfully,
T. H. SPAULDING.

No. It is not at all satisfactory. In the report of the Chrysanthemum Society of America and in the list in our directory and reference book the variety Gladys Spaulding is on record. These lists have been widely disseminated among American chrysanthemum growers, and the duplication of the name is bound to cause confusion. What evidence are we to accept that a variety is extinct? And where is the necessity for duplicating the name even if the variety is extinct? Mr. Spaulding will confer a favor by designating those varieties in our list that were "never distributed." Varieties that were not disseminated should not appear in the list, but any one of which even one plant was sent out should be on record, and its name should under no circumstances be knowingly duplicated, otherwise confusion is sure to result.

Mr. Smith was notified that the name Juno had already been used, and he at once gave his variety another name.

Foreign Notes.

In the London *Garden* of November 17 appears the following from the pen of Mr. C. Harman Payne, foreign corresponding secretary of the National Chrysanthemum Society of England:

On the second day of the N. C. S. exhibition blooms of a variety called Philadelphia were received from an American grower, Mr. Hugh Graham. This variety, presuming our climate does not make any difference, is destined to occupy a prominent place in our collections. After its voyage across the Atlantic Philadelphia certainly seemed none the worse, and it may be described as a very large round Japanese incurved flower with grooved, pointed florets of great width. The reverse is ribbed and the color white, with a faint primrose marking at the tips. It has already been awarded a first-class certificate by the American Chrysanthemum Society, and the English N. C. S. thought so highly of it that they awarded the raiser their silver-gilt medal. Mr. Hugh Graham may be congratulated on his enterprise in despatching blooms for exhibition such a distance, and he is certainly the first American who has been awarded such a distinction.

And the following chrysanthemums of American origin were honored by certificates by the National Chrysanthemum Society of London, England:

W. G. Newitt.—A very large white Japanese, with long drooping florets, seen in good form last season and fairly well known.

Niveus.—An excellent Japanese from America. A deep, chaste-looking flower of the purest paper white. The blooms are compact and the florets of medium width.

The Queen.—Rather a large, solid-looking Japanese, with curly, notched florets of great length; color white.

E. L.

DO YOU WANT Mr. Scott's seasonable hints for the year in book form, so that you can refer readily to his suggestions for any week in the year? You will find them in this form in our trade directory and reference book for 1894. Price \$2.00.

Boston.

Trade has been at a standstill since Christmas. In this respect Christmas seems to come as a positive injury to the flower market. It disarranges things generally, for the time being, and in exchange we get a couple of days of extra activity, followed by a week of the dulllest kind of dullness. There was a time when New Year's demands served as a partial recompense for this condition, but this is the case no more, and New Year's now makes not the slightest ripple on the surface of the flower trade in Boston, the shipping trade for this occasion being also a thing of the past. The lack of demand has been accompanied by a rather short supply of stock, and so there has been but little trouble with any overstock, and no great slaughter of prices as yet. Roses vary greatly in price realized. While, for instance, for Mermets of fair every day quality \$8 per hundred is about the average figure obtainable, some growers with special grown and handsome stock are asking and getting as high as \$25 per hundred. Carnations are not too plentiful for regular requirements, and go all the way from \$2 to \$4, according to quality and variety, Wm. Scott bringing the higher figure, and colors selling better as a rule than whites.

New Year's eve was a gala occasion at the residence of Mr. Wm. W. Edgar, at Waverly. This very popular gentleman has just returned from his bridal trip, and found on his return a handsomely furnished side-board, set up in his dining room with the congratulations and good wishes of his gardener and florist friends. The happy couple were "at home" on New Year's eve, and this occasion was selected as a fitting time to put the side-board into active service. Some forty of "the boys" with their ladies participated in the happy event, which will be long remembered as one of the merriest on record.

The schedule of prizes offered by the Mass. Horticultural Society for 1895 is all ready, and may be had on application to Secretary Manning. The amounts appropriated for regular prizes and gratuities during the year are as follows: For plants \$2,100, for flowers \$2,500, for fruits \$1,800, for vegetables \$1,150, for gardens, etc. \$500. For the large exhibitions of the society the following dates are announced: Spring Exhibition March 26 to 29, Rhododendron Show June 6 and 7, Rose and Strawberry Exhibition June 20 and 21, Annual Exhibition of Plants and Flowers September 4 and 5, Annual Exhibition of Fruits and Vegetables October 2 and 3, Exhibition of Chrysanthemums November 5 to 8. The annual convention and exhibition of the American Carnation Society will be held in these halls on February 21 and 22. Last Saturday a handsome collection of carnations in six varieties was staged by C. W. Ward of Queens, N. Y. Complimentary notices were awarded to two seedlings, named Bridesmaid and Meteor. In this connection we are inclined to remark that the selection for carnations of names which have already become identified with certain roses is unwise, and calculated to make confusion in the future.

Mrs. Jas. Rough Jr. died on December 31, after a long and painful illness. Mr. Rough is one of our most popular retail florists, and a large number of gentlemen identified with the trade took occasion to show their sympathy by attending the funeral, which took place on Wednesday, January 2.

Mr. C. M. Atkinson has resigned the

position held by him for many years as gardener in charge of the estate of John L. Gardner at Brookline, and will be succeeded by one of his under gardeners, Mr. Wm. Thatcher, a young Englishman of experience, formerly in the employ of the Duke of Westminster. Mr. Atkinson is a gardener of rare attainments, with few equals in the culture of hard-wooded greenhouse plants and other difficult subjects. Simultaneously with his laying down the implements of gardening he will assume the duties of married life once more. He proposes to spend the winter in the south, possibly visiting England at a later date.

There was an unusual glow of reflected sunlight or something of that sort in the vicinity of the stand occupied by Wm. M. Robertson at the growers' market on New Year's morning, which was duly accounted for when that gentleman blushingly acknowledged that there had been a wedding the night before, and that he was one of the happy principals.

The wife of Mr. Wm. Robinson of North Easton, who has been nursing a daughter sick with scarlet fever for several weeks, has now been stricken down with the same disease, and is seriously ill.

The January meeting of the Gardeners' and Florists' Club has been postponed until the evening of Tuesday, January 8.

New York.

The week succeeding Christmas has been exceedingly dull, one of the dulllest weeks of the season in fact. Receipts of flowers of all kinds have been heavy and considerably in excess of the market for same at quoted prices, and the overstock has been moved with difficulty and at unsatisfactory figures, as a rule, the only notable exception to the prevailing overproduction being the American Beauty rose. Of this much coveted stock there has been, and is, a decided shortage, first-class blooms bringing \$1 each, and being called for in quantities far in excess of the supply. Hybrids of good quality are coming in in moderate quantity, and are taken as second choice when American Beauties fall short. The best selected Meteor, La France and Testout have commanded as high as \$15 per hundred, but for the average run of roses figures have gone much lower, \$10 per hundred being considered top price and much of the average stock going as low as \$35 to \$40 per thousand when sold in quantity. New Year's did not bring much relief, and was in general very disappointing in its results. Many of the leading flower stores were closed up by 11 or 12 p. m. on the 31st, something unheard of in the former days, when New Year's was New York's greatest holiday.

There had been considerable stock hustled in on the 31st, and much of it laid over in the boxes as received until the following day, wholesalers finding it impossible to get it off their hands. Violets continued as in the previous week, too plentiful for the needs of the market, prices obtained ranging all the way from 50 cents to \$1.50 per hundred, and in rare cases for gilt edged stock \$2. Bulbous stock also went slowly. The first yellow narcissi were in for New Year's, and brought but \$4 per hundred. The weather being very cold an unusual amount of stock has been frozen in transit to the city. The disposition noted recently among the growers to fluctuate from one commission house to another continues without abatement, and quite a number of changes of this nature have occurred during the past week; wherein the advantage lies it is difficult to see.

The annual Christmas prize bowling contest of the Flatbush Bowling Club, wherein the participants roll for prizes that they know nothing about, came off at Bantel's Park Club House on the evening of December 27. Notwithstanding the very cold weather every member of the club with but two exceptions was on hand. Mr. Julius Kretchmar and A. T. De la Mare were present as invited guests. The customary "sight unseen" selection of trophies took place amid much hilarity, fickle fortune decreeing that most of the articles drawn should fall into the hands of the party for whose use they were least appropriate. A substantial lunch was served, and pleasant remarks were made by the various members, this part of the program being opened by the old veteran Mr. Chas. Zeller, who spoke feelingly of the unity and good fellowship which prevails among the Flatbush fraternity.

Mr. F. Schuyler Matthews has been examining with critical eye the new rose, Belle Siebrecht, and pronounces it a true pink, without any inter-mixture of other colors, a rare self color, most beautiful and rich. This rose seems to be a good keeper in regard to color, fading lighter with age, without showing an inclination to purple.

Nothing has yet been heard of F. B. Wenderoth, who disappeared December 10. Nor has anything developed which would in any way explain his disappearance.

Chicago.

New Year's as a red letter day in the florists' calendar is certainly a thing of the past. The transient business is no larger than on any good Saturday. If it hadn't been for the fact that a number of entertainments were held at the various clubs on New Year's eve, and a few good sized weddings New Year's day, the business would have been flat indeed. In the down town district particularly things were very quiet, a fair activity being most noticeable in stores located in the residence quarters; here in a few places there was an actual rush for a few hours. Taken collectively, however, the trade was very light. It is well on the whole that the demands made on the market were not heavier as the supply was also extremely light, particularly as regards carnations.

The most noticeable feature in the recent holiday trade was the marked increase in the demand for first-class quality of carnations. There is no question that this flower is gaining in public favor with marvelous strides. It is most gratifying to note also that the carnation growers in this section are fully alive to the importance of this question. In no other line has the improvement both in quantity and quality been so marked. Really fine whites have probably been the weakest on the list. Uncle John is certainly very fine, but so few flowers of this variety are grown around here that it really cuts no figure. Puritan, grown well in some places, is out of crop. The bulk consists of Silver Spray, fairly good in average but certainly not first-class. McGowan is good but rather indifferently grown. Mrs. Mailander, a promising new variety, is also off crop. This latter sort, a cross between McGowan and Hinze's White, though grown quite extensively by the originator has not as yet been disseminated, but we shall speak of this variety later. In reds the main bulk consists of Portia, which is fairly well grown by quite a number, and very poorly by others. When we say poor we mean small, since the color is always fine.

ARRANGED BY GALLAGHER FLORAL CO
ROSE BASKETS AT THE CHICAGO EXHIBITION

Violets had been picked very closely last week and consequently the supply was very light. Prices jumped up again to \$2 for good stock and ranged down to \$1.50 for fair to medium. Stevia, for which there is quite a lively demand this season, is all cut out. In bulbous stock the supply is unusually light. Some fairly good valley of this season's forcing is now coming in, but is as yet sadly lacking in foliage. Romans move much better than last season, at the same time the quality is very good and the supply but meagre. In tulips Proserpine is the only variety sent in in salable condition and these are very short. Scarlet Duc Van Thol are of no earthly use. One or two growers brought in some good poinsettias which sold well at \$1.50 to \$3 per dozen. It is something unusual to see an active demand for smilax; very little is grown around here at present and the stock is pretty well cut out. Really good mignonne finds a ready market, but the poorly grown stuff finds no buyers at all. Peters & Arnold, Damm Bros. and Stielow are cutting some fine spikes.

The demand for orchids, cattleyas in particular, is very lively and as now the regular season is on the demand will be increasing. Harrisii is in fair supply and of average good quality, which always find a ready market.

We are well pleased to note the fact that so far as has come to our notice there was no pickling of stock for once. Nor was any stuff which can not properly be called "pickled" held back unduly. If there was little or no stock on the market the early part of the week it was because there was none to be had. It is owing to these conditions that the high prices have steadily been maintained with hardly a break in any one line.

It is remarkable that in spite of the high prices shipments to outside points went out in a steady stream. Although there is more or less kicking as regards exorbitant prices, there is far less complaint as to the quality of stock than in former seasons.

Thos. C. Ruston is now with Wm. Blackman, Evansville, Ind.

Wm. E. Hearne recently passed through the city on his way to Belgium.

The annual meeting of the Hort. Society of Chicago will be held at the Sherman House January 12.

Philadelphia.

Although the trade has been quiet since Christmas there has not been an overplus of flowers, etc. Prices have not declined much as yet. Carnations have been scarce and prices very little below those of Christmas.

January 1 brought an extra demand, but this holiday has ceased to be much of a factor in the flower trade. There was quite a hustle for flowers, however, as the cold days of the past week when the thermometer was hugging zero made stock of all kinds scarce. The large teas brought \$12 to \$15, a few extra La France touching \$20. Small roses sold for \$6 to \$8, most of them bringing the latter figure. Beauties ranged from \$25 to \$60. Brunners brought \$60. Smith & Whiteley, Burton and Heacock are cutting Brunners. Anderson's first house will not be in before the 15th, when he expects a good crop.

Carnations have been in good demand, Daybreak leading in popularity. All good flowers sold readily at \$3, while the fancies brought \$4. Helen Keller, which seems to travel in a class by itself, was offered at \$8. Double violets were in

Chas. Hartwig was to the front again with a magnificent house of old Garfield; there is nothing the matter with this sort if you can manage to bring it into full crop for Christmas, but there is the rub. We have found this variety grown in any number of establishments but nowhere except at this one place did we see it in full crop; too late everywhere. All the pink varieties except Wilder are uniformly fine.

The supply of roses was just about equal to demand, except in Bridesmaid, Testouts and Meteors. As at Christmas

these three varieties sold short early in the day and twice the number could easily have been disposed of. Mermets had to be substituted largely for Bridesmaid to the great disappointment of the dealers. The Mermet by the way is improving considerably in color. Brides are still the most plentiful and under light demand weakened a little in price, at least as regards the off grades. First quality went at 12 to 15. Perles also declined a point or two, with 8 as the ruling figure. On the balance of the list prices held firmly at Christmas quotations.

demand at from \$1.50 to \$2. Valley, Romans and paper white moved lively at \$4 per hundred.

Blooming plants are scarce, there being but little assortment. J. W. Coffish has some begonias and *Harrisi* lilies in pots; nice plants. R. Craig's cyclamens are getting into shape and are full of bloom, a necessary requisite to a salable plant. There are also some primulas, but none of the celebrated Harris strain. Mr. Wm. K. says there is no money in primulas at less than \$3 per dozen for 6-inch pots, and so he dropped them. They have been a specialty with him for a long time for Christmas.

Chas. Fox has purchased a property on Broad street above Thompson, about one block south of his present location, which he will improve to suit his business and occupy some time next summer.

H. C. Sheaffer, on 7th below Chestnut, has sold his business to H. Waterer, who will continue at the old stand. K.

How to Lay out and Plant an Acre Plot for a Suburban Residence.

BY JOHN CURWEN, JR.

[Read before the Florists' Club of Philadelphia, December 11.]

While the subject does not especially interest all florists, it does interest those who, living and carrying on a general business in the neighborhood of the city an often called upon to do such work. And to these I address myself more particularly.

First let us select our ideal lot: In dimensions the width should be about one half the depth or 145x300 feet; the surface a little above the highway, gradually rising to the position the house is to occupy, and falling away again at the back and sides. The distance of the house from the highway is sometimes regulated in the conditions of sale or by village ordinance but should be not less than 60 to 75 feet from the middle of the highway. The house should stand towards one side or the other of the lot, as convenience, surroundings or the lay of the ground may determine. The position of the house being decided upon, the approach, whether by foot or carriage, must be planned so as to be most convenient and direct, consistent with graceful lines, remembering that whatever is appropriate is artistic, and therefore graceful, though as a rule curves are preferable to straight lines. If the approach is to be by carriage, bring the driveway in near the sideline, carrying it directly in front or to one side of the house as may be necessary, with the turn at the back of the house or at the stable if you have one. The stable should be as far from the house as the lot will permit (then it is too close sometimes) but allow access for supplies and removing manure, etc., unless there be a passage back of the lot.

But to return to the front; if a footpath is necessary, in addition to or in place of the driveway, the same principle will apply; it should be as direct as possible, without being obtrusive or stiff, for green sward is more pleasing to the eye than the best kept gravel. For the same reason the approaches must not be made wider than necessary, 3 feet to 3 feet 6 inches for the path, and 10 feet for the driveway. If the approach is laid out in a curve, there should be a real or apparent reason for it, in the shape of a tree or clump of bushes to go around or a steep grade to avoid.

So much for the laying out; now for the planting. But I have forgotten to speak of the sidewalk which all self-respecting suburbs should have. In most modern

villages there is a space of 10 to 12 feet between the curb and the fence or hedge; the walk should occupy about four feet of this, a foot nearer to the fence line than to the curb, and should be of uniform width and lasting material (concrete on a good foundation) in front of all the lots.

The street trees should be planted between this walk and the curb, and kept trimmed to a good height so as not to interfere with passers by. A list of desirable trees for this purpose was published in the horticultural papers some time ago by Mr. Meehan, than whom there is no better authority. Let me emphasize the desirability of having all the trees in the same street of one kind or of two kinds

CHRYSANTHEMUM MRS. POTTER PALMER

planted alternately; and another kind in another street. Tall shade trees should not be planted very close to the house, as they cause dampness in summer and the falling leaves stop up the rain conductors. Nor should they be too close to each other, for they will spoil one another when they grow; it is very hard to cut down a tree that you have planted and cared for, just when it is developing into a fine specimen. It is easier not to plant.

For this reason and others make haste slowly in planting a new place, for unless you have a very conscientious adviser you will find, when you become more familiar with trees and plants, and meet with something rare or especially desirable, that you will have no suitable place for it without crowding the others or encroaching on the lawn space, which you will find is not any too extensive on a one acre lot. Also remember not to plant out your desirable views when planting out undesirable ones. Plant the tall growing trees along the side lines, or to screen some unsightliness or the blazing sun of summer afternoon. Do not have these of only one or two kinds, for we Americans have the richest native flora of any country, I believe, to select from. Not to mention those trees, etc., from other countries, that will thrive here.

Probably the tree that is most generally popular is the sugar maple, followed closely by the Norway and silver maples. Native and foreign oaks are among the most desirable lawn trees, as many varieties grow quickly and none are very subject to disfiguring attacks of insects or diseases. Birches, beech, tulip tree, elm, ginkgo or maiden hair tree, and for lower growing kinds, dogwood, flowering thorns, white fringe, magnolias, double

flowered peaches and cherries, and many more. Evergreens should have a place too in front the other trees, a few pines and spruces with the little gems of *arborvitae* and *retinospora*.

Cluster the trees to a certain extent, but not so closely as to present full development, unless you want to form an especially shady nook, when it is a good idea to have several of one variety, or several varieties of one species planted close together. The space between the curve of the drive and the side fence is a good position for a shrubby bed, and on the corner, just at the entrance put a clump of *Hydrangea paniculata* or *Spiraea Thunbergii*. Other good positions for shrubbery are for a screen where a hedge would be too stiff to soften bare walls and fill in vacant corners.

Do not overlook the ornamental inconsidering the useful qualities of fruit trees. Who has not admired the snowy petals of the early cherry blossoms, and gone into raptures over the exquisite tints of the apple's buds and blooms or wondered at the masses of quince blossoms, the last of the tree fruits to bloom. Surely we must make the best use of all this beauty. Plant these at one side of the house towards the back, where they will make an effective screen for the drying ground. Apples, except the crabs, take up more room, by the time they are of bearing age, than we can spare, so pears will be the largest growing fruit trees we will plant; begin at the back, planting about 20 feet apart; peaches, cherries and apricots next and quinces in front of all.

The vegetable garden will begin at the back of the lot, and if there is no stable, extend the whole width, occupying as much ground as the size of the family will require. Plant only those things that always taste better freshly gathered out of one's own garden. Plant a wind break of evergreens on the north and west of the garden if there is no other protection on those sides. The sunny side of this hedge is the places for the hotbeds and frames for pansies and violets, and early vegetables. There should be a screen too on the side towards the house, unless the windbreak should happen to serve the purpose. On the house side of this screen is a fine place for the rose or hardy herbaceous border. A very pretty effect is given by having an opening in this hedge, with an arch over it either of the evergreen of the hedge, trained or of rustic work, with *Ampelopsis Veitchii* growing over it, with its gracefully trailing sprays. Opposite this arch, make a substantial path the full length of the garden and wide enough for a cart to travel on, to haul the manure for the garden etc., and to remove the rubbish.

If a great quantity of cut flowers is required through the summer, have a border of hardy and annual flowers on either side of this path on purpose for cutting; then the beds on the lawn will not have to be robbed of their beauty. Define the edge of the path with a box edging or golden honeysuckle trimmed very low, and back up the border with the grape trellis or dwarf fruits, for both flowers and fruits like high living and you will find a few plants, like pansies that like some shade through the summer.

[CONCLUDED NEXT WEEK.]

SING SING, N. Y.—Christmas trade was very good this year, with an increased demand for palms and flowering plants such as primulas, cyclamens, etc. More cash business than last year; weather very fine.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a gardener and florist; 20 years' experience. First-class references. Address J. J. P. O. Box 18, Riverdale, Ill.

SITUATION WANTED—By a single man in greenhouse; private or commercial; 4 years' experience; steady and reliable. A. J. care Am. Florist.

SITUATION WANTED—With seed house; 7 years' experience; capable of filling any position; reference furnished. AD KEYSTONE, care Am. Florist.

SITUATION WANTED—By February 1, as foreman in first-class commercial place; 11 years' experience; single. Address A. RASMUSSEN, 310 Liberty St., Warren, Pa.

SITUATION WANTED—By Jan. 15th by a young man in my employ, of 3 years' experience; a good all-round workman; not afraid of general florist work. GEO. L. GRAHAM, Bradford, Pa.

SITUATION WANTED—By a young man having 5 years' experience, to do general greenhouse work. The very best reference given. Address ILLINOIS, care American Florist.

SITUATION WANTED—By a second man, commercial or private place. Well experienced also in landscape gardening. Wages moderate. Best references. F. H. H., 135 Harrison Ave., Boston, Mass.

SITUATION WANTED—To any one wishing a first-class foreman for commercial place, we take pleasure in recommending a thoroughly practical man; single, age 29; now in our employ. Address HONAKER, Lexington, Ky.

SITUATION WANTED—By gardener; competent in growing all varieties of plants, violets, carnations, roses; also forcing fruits. Private place preferred. Married; age 35. Address GARDENER, 144 West Water St., Elmira, N. Y.

SITUATION WANTED—As headgardener, by first-class grower; 7 years European and 8 years American experience. Commercial or private; German, married. Address A. EISENHARDT, Sunnyside Greenhouses, Walden, N. Y.

SITUATION WANTED—By two competent florists with about 5 years' experience, would like a situation together in a large commercial place—vicinity of Chicago preferred. Can furnish good recommendations. Address A. B. care American Florist.

SITUATION WANTED—In a first-class commercial establishment as foreman or general manager by a practical seed grower and plantman who has had a life experience in commercial business, is a thorough grower of plants, roses and general cut flowers, and is thoroughly posted in nursery stock, fruit and ornamental trees, evergreens, shrubs, etc.; only those who require the services of such a man and pay the highest wages need answer. Best of references furnished from the largest commercial places in the country. Address A. B. C., 203 Columbus Ave., N. Y. City.

WANTED—Agent, by one of the oldest Dutch bulb houses. Particulars and references, address BULB, care American Florist.

WANTED—An assistant; must be quick at working among roses, etc.; \$5 per week and board. Address with reference and experience. WM. KIRKHAM, Maywood, Ill.

Gladioli, mixed, light shades predominate, \$1 per 100. Small bulbs of above for florists' growing. McCREA & COLE, Battle Creek, Mich.

TWO NEW CHRYSANTHEMUMS.

*

"MRS. POTTER PALMER." (Seedling of Fred S. Walz, originator of "The Queen" and "H. L. Sunderbruch"), Winner of Columbian Medal, Chicago, 1893, for best pink seedling. Certificate at Indianapolis, 1894. I claim it to be the best pink, commercially, for cut flowers, and as valuable as "The Queen." Flowers large, full to the center, outer petals reflexed to stem with incurved tips, inner petals interlace and incurve to a fine globular form; color rosy pink, reverse silver, stem stiff, growth vigorous, unexcelled keeper.

PRICE: \$5.00 per dozen; 6 at dozen rate, \$30.00 per 100; 50 at 100 rate. Ready March 1st. Orders booked strictly in rotation.

"FRED WALZ." (Seedling of Theo. Bock.) Winner of the National Certificate of Merit, 1894. Flower incurved full to the center, making a perfect ball, medium size, clear lilac pink, reverse silver, petals boat shaped. Plants short, better grower than "Ivory" for cutflowers, market or specimen. Stem stiff, foliage dark green, close up to flower.

Stock limited. Orders booked strictly in rotation for March 1st, at \$40.00 per 100; 25 at 100 rate. \$6.00 per dozen; 6 at dozen rate. ☐

Address **FRED S. WALZ, Station A. Cincinnati, O.**

OBITUARY.

JOHN A. SHEPPARD.

John A. Sheppard, the only surviving son of the well known and oldest Lowell florist, Edwin Sheppard, died at his home in Lowell, Mass., Tuesday, January 1, 1895.

His loss will be keenly felt by his large circle of intimate and business friends, both in Lowell and Boston, where he was well known and appreciated for his active business ability and thorough knowledge as regards floriculture and its advancement, which he firmly believed in.

Great sympathy is extended to his wife and father for he was their all, being the last one of a family of three brothers, sister and mother, all succumbing to the same dreaded disease, consumption.

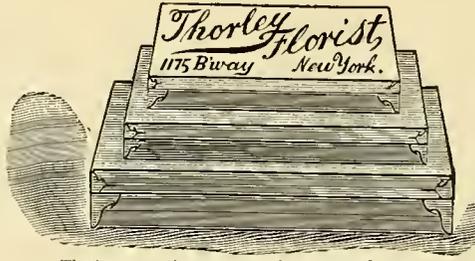

Mr. Sheppard was 37 years old, born in Lowell and graduated with high honors from the grammar and high schools. His natural taste in business was the cultivation of flowers, but as his two brothers were with their father, he learned railroad engineering, and at their death, about seven years ago, returned home and started in business with his father, styling the firm, E. Sheppard & Son. Owing to Mr. Edwin Sheppard's advanced years the management has devolved upon his son, whose sterling integrity and indomitable pluck, has greatly increased the volume of business. Shortly afterwards he was married; he leaves no children. He was a prominent member of many social orders and high up in the Masons, Odd Fellows, Elks and Knights of Pythias.

Funeral took place Friday, January 4 from his father's home on Fairmount street, Lowell, Mass. J. W. HOWARD.

HON. MORRIS. R. JONES.

Hon. Morris R. Jones, a well known florist and esteemed citizen of Rome, N. Y., died at his home on North George street on Wednesday, December 26, aged 60 years. He came here from Wales at the age of 20 and soon secured a situation as gardener in charge of the greenhouses and grounds of the late Edw. Huntington and afterwards had the care of the grounds of B. N. Huntington, a position which he retained until about 20 years ago when he established himself as a florist. Mr. Jones was a model citizen, a man of integrity and kindly disposition. His loss will be deeply felt and his memory cherished by all who knew him.

THE CHRISTMAS TRADE reports that appear in this issue, and those printed last week, make very cheerful reading, in view of the times. With the prevailing business depression it would have been gratifying had the trade only held its own, and to be able to report the usual annual increase is a very great pleasure.

The boxes as they appear when set up for use.

We make them in a sufficient number of sizes, including for violets, to meet all necessary requirements.

MR. CHAS. P. BRASLAN is in New York City in attendance at the meeting of the Executive Committee of the American Seed Trade Association.

BERLIN, GERMANY.—F. J. M. Plumpe, editor of *Der Gartenbau*, died November 12.

Bone Meal.

Mr. Robert Simpson in his essay on fertilizers read before the convention at Atlantic City says: "There is danger from bone meal in the greenhouse if it has come in contact with acid." And mentions a gentleman having lost \$2,000 worth of roses at one time through its use. Did Mr. Simpson mean bone that has been reduced with sulphuric acid to make the phosphoric acid more available? This fertilizer, dissolved bone or bone superphosphate has been in general use for years, but I have never before heard of it being harmful to plants or seen any ill effect from its use in the garden. How do rose plants show the injury?

Hamilton, Ont. CHAS. M. WEBSTER.

Replying to Mr. Webster's criticism, I would say that I consider bone cut with acids of any kind in process of preparation, altogether too risky an article for a florist to use in his greenhouse benches. I am well aware it is used regularly on the farm and in the garden with good results but there is a vast difference between the way it is used on the open ground, and as generally used for greenhouse crops.

In using bone meal for roses and other plants grown on benches we have used about 200 pounds to 100 running feet, taking a regular three-quarter span rose house which averages from 18 to 20 feet in width; this would give about one pound of bone to every 2½ cubic feet of soil; it is safe to say that bone is never applied in such proportions out of doors, consequently there is less risk in using an inferior or adulterated article. The freer circulation of air, etc., too would be an additional safeguard in the field.

Am glad to say I have been fortunate enough to escape trouble from this source but I have known several less fortunate growers. Only this fall a florist in this state wrote me to the effect that bone meal had ruined all his roses, and it was only after the plants were lifted and put into soil free from bone that they would make any growth whatever.

The gentleman I mentioned in the article referred to, as having lost \$2,000 worth of new roses on one occasion from bone cut with acid was the late Mr. Myron A. Hunt, who I know was a very careful and intelligent cultivator of the rose, and one who certainly knew what he was writing about.

If it were necessary instances of this kind might be multiplied, but I think the average florist has enough enemies to fight and perplexities to puzzle out in his business, when he does his level best to avoid them, without being desirous of running unnecessary risk, by using an impure article in his soil when the genuine thing can be obtained at the same price.

ROBERT SIMPSON.

Culture Leaflets

A series of single-sheet instructions on the main plants, including Roses, Chrysanthemums, Tuberosus Begonias, Cannas, Palms, Lilies, Pansies, Foliage Plants, etc., etc.

Save lies, jaw wear and dissatisfaction if used with counter and greenhouse sales; insure proper treatment if shipped with plants. Don't cost much, either; send for samples, and you'll want a lot.

THE most successful farmers and gardeners buy their seed directly from the growers; for this reason we raise largely the most risky kinds, especially Cabbage and Onion Seed. This latter is extra fine this season. No catalogue contains more varieties of vegetable seed, and none more of the new that are really good—see outside cover for an illustrated selection from our new specialties, which we will sell at half rates. Catalogue free.

Baltimore.

New Year was bright and beautiful but business was very little ahead of any ordinary week day in winter, when the skies are clear. Whether the customers had bought themselves poor Christmas, or were so busy making good resolutions that they had no time for buying flowers, or the frosty air daunted them, or they were all up so late December 31, that January 1 went by before they knew it, or some other equally weighty reason held them, no one perhaps can certainly say, but certain it is that the first day of the year is neither better nor worse in any marked degree, barring the weather, than dozens of days before and after it as far as the sale of flowers and plants is concerned.

The delightful weather which we so much enjoyed Christmas was succeeded by a driving snow storm next day, and on Friday night the mercury had such a fall that it must have been stunned, for it has only made the feeblest kind of efforts to get up again, so we have everything covered with ice and snow and frost in the air even under cloudless mid-day skies, and perfect sleighing and beautiful skating but nothing very extraordinary in the way of business to chronicle this time. "Always a calm after a storm," say the old stagers, and no doubt they are right.

Stock is still plentiful and of fairly good quality, at least as far as roses are concerned. Carnations though are scarce, and violets becoming more so.

Some one in the club once raised the question whether it was right that flowers should be sold in dry goods stores, as one of our enterprising Hebrew merchants was running a plant counter. The general feeling seemed to be against it, and the practice apparently was not profitable for it soon lapsed, but a new departure was started recently out Charles street above North avenue where on one side of the street may be seen a barber shop with "choice flowers for sale" and a lot of miscellaneous plants standing about; and on the other side a confectionery with much the same display. It gives rise to a rather curious question or rather series of questions. If the proprietors of the shops buy the stock to sell again how can they possibly make it pay them? If the owners of the flowers bring them there and sell them having too small a supply to run a store themselves, it seems that a more profitable plan would be to find some regular customer at wholesale or take a stall in market. The same thing has been seen in several places, mostly small towns unable to support a regular florist, but a report as to the profitableness of the plan has never appeared. Will some kind friend having experience give a little light on the subject? A gentleman who shared his store with a mineral water man here, has abandoned the plan and is now occupying the entire store, but the two cases mentioned seem to indicate that there are believers in the hybrid business still.

MACK.

A Christmas Order.

The following order was received by Mr. Wm. Blackman of Evansville, Ind., December 24.

Dear Sir:—Enclosed find order for 30 cents for which please send me some white roses and a little smilax. If you haven't the white, send cream or pink. Please send late this evening, so as to get here on to-night's or rather morning train, as I wish them fresh to-morrow. Send by mail, and greatly oblige.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

YOU CAN never invest \$2 to better advantage than in a copy of our trade directory and reference book.

WANTED!

A good, free blooming, healthy, vigorous **Yellow Carnation**. Flowers must be perfect, of fair size and borne on long, stiff stems. There must be plenty of pips, and these easily rooted.

AND HERE IT IS—Any one of the following will fill the bill:

ELDORADO—Pure yellow ground edged with light pink. Picotee marking.

KITTY CLOVER—Light yellow striped red with a little white.

EULALIE—Yellow ground penciled with pink.

We also offer this year

PRINCESS BONNIE—A beautiful pink variegated flower of large size; and
DAISY BELL—A white, variegated similar to Chester Pride, but very much larger flower.

Send for general price list of both Carnations and Coleus.

F. A. BALLER, Bloomington, Ill.

The * New * Scarlet * Carnation LIZZIE GILBERT.

Undoubtedly the finest scarlet yet introduced. Bright scarlet, strong grower, good long stem, does not break the calyx, is fragrant, early, and NOT A CROPPER.

Dr. L. L. Lamborn, Alliance, O., writes Dec. 20, '94 of Lizzie Gilbert as follows:

"I have all of the sixteen varieties of carnations introduced in 1894 now blooming, and some of them are sterling sorts, also Lizzie Gilbert, the famous scarlet to be offered the coming spring. If I were compelled to save but one of the lot I would sacrifice all for Gilbert. Portia has long held the boards against all comers as the queen of scarlets, but the marvelous development of carnations has comparatively further dwarfed its naturally diminutive flower until it is now refused in critical markets.

"The advent of Lizzie Gilbert is most opportune. It steps upon the dais with the air of a conqueror and dons upon its magnificent corolla a crown of scarlet which rivarly will not disturb for twenty years to come."

L. L. LAMBORN.

We are now booking orders for Rooted Cuttings of this grand Carnation for delivery commencing February 15th.

Price, per 1000 Rooted Cuttings, \$80.00; per 100, \$10.00.

250 at thousand rates; 25 at hundred rates.

Cincinnati.

The annual meeting of the Cincinnati Florists' Society for the election of a board of directors will take place at the rooms of the society, January 12.

We are having some winter at last. The day after Christmas there came a snow storm worthy of the name and it is staying with us. The weather has been cloudy and flowers are scarce. Trade, both wholesale and retail, is very brisk. The cry of "sold out" has been an oft repeated one.

Mr. Hardesty had a fine display of orchid blooms in his window and Peterson had a few fine blooms of his own growing. The demand here for orchids is very limited as yet, but we hope a persistent display of them will educate the flower buying public and create a demand.

Many good potted plants were sold for Xmas and New Year presents. Azaleas, poinsettias, begonias, primulas, Roman hyacinths and paper white (3 or 4 in a pot) all sold well and there was quite a demand for good palms and dracenas.

The stock of roses has not improved in quantity or quality, though Mermets showed an improvement in color. Brides and Mermets were held by the commission men at from 12 to 14. Perles were almost an unknown quantity; stock was very small and very poor but the price commanded was from 10 to 12. Gontiers were a little more plentiful, but still not enough to go around at 6 to 8. Beauties were held at from 50 to 60, with good demand and limited supply. Carnations were scarcer than for Christmas. All the growers had cut for Christmas everything that was fit to market, consequently there was a shortage in most varieties.

Violets are still extremely scarce and are held at very high prices. In bulb stuff the market was also short. Romans, which in former years had been a perfect drug, were in good demand and every flower was sold at good prices. Valley has not improved; most of the stuff that appears on the market has not a single leaf and takes poorly.

The wholesale men report an extraordinary shipping demand. From the middle of December up to date fully one-third of the orders could not be filled.

Corbett & Wilson, of College Hill, are troubled a great deal with ground mice eating their carnation buds. In one night Mr. Wilson said they ate as high as 80 or 90 buds. P.

T. H. NEVIN CO.'S
"GREEN HOUSE PUTTY"

(TRADE MARK.)
 To be applied with a bulb. The only putty made to work this way for greenhouse sash.
PUT UP IN 20 lb. CANS.

Has been used by florists in this city for years. Try it and you will use no other.
 Read the following good report of our Green House Putty:

PITTSBURGH, PA., September 1st, 1894.
 We have been using the T. H. Nevin Co.'s Green House Putty for some time, and are pleased to recommend it to all those who wish a number one article. It has always given us perfect satisfaction. When you use this Green House Putty you will be sure of good results from same. Signed:
 JOHN RODGERS, Florist, Green Tree Boro., Pa.
 HARTMAN BROS., Florists, Allegheny, Pa.
T. H. NEVIN CO.,
 Corroders of STRICTLY PURE LEAD,
 P. O. Box 928, PITTSBURGH, PA.
BEWARE OF IMITATIONS. None genuine unless labeled as above.

Springfield, Mass.

Every dealer reports the biggest holiday trade in years. In almost every instance the sales exceeded expectations, roses and greens being particularly in demand.

An attractive advertising souvenir was issued by the Gale Floral company just before the holidays. It consisted of a twelve page leaflet, daintily illustrated, and contained a brief description of various kinds of greens appropriate for Christmas decorations, the last page being devoted to some interesting facts about choice cut flowers.

Charles R. Miller & Co., report the best Christmas trade in years. The firm disposed of ten large cases of holly and Mr. Miller says he could have sold as much again if he had had the stock.

The annual prospectus of the Hampden County Horticultural society will be issued early in February and besides the usual announcements and premium lists of the year's exhibitions it will contain much interesting information for dealers and growers. The special premium committee appointed at the annual meeting of the society in November will make its report to the board of managers next week and among other things it will recommend that \$1,000 in premiums be offered next season, about \$400 more than on any previous year. F. W. J.

STOCKTON, CAL.—Mrs. E. M. Shaw has succeeded to the business of M. J. Shaw, corner Eldorado and Channel streets. Two small houses belonging to E. C. Clowse were recently destroyed by fire. H. P. Fitch is building a greenhouse 16x30 feet. The cut flower trade here is small; demand for funeral designs good.

TAYLOR, TEXAS.—The entire contents of a small greenhouse 16x40 filled with general pot and bedding plants belonging to A. J. Seiders was frozen on the night of December 27. A severe hail storm followed by an unusually sudden and severe cold spell was the cause. No insurance. Loss about \$250.

SEE HERE

BROTHER

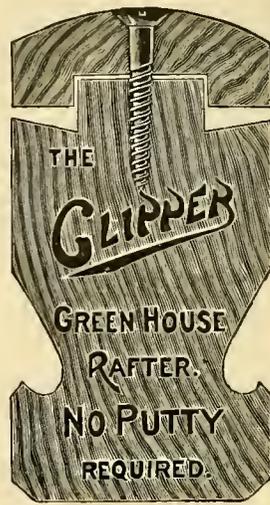

FLORIST!

Aren't you tired going through your houses two or three times a day year after year and lifting your ventilating sash one at a time and propping them up with sticks or pots, with a chance of having sash blown off and broken glass to pay for? If you are

We have got just the thing you need, the NEWEST and BEST thing out. "The New Departure" for about half the cost of the old style. Send for Descriptive Catalogue to

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Doppfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

Society of American Florists.

President Lonsdale has appointed the following gentlemen as members of the executive committee for three years beginning January 1, 1895: Jackson Dawson, Jamaica Plain, Mass.; Grove P. Rawson, Elmira, N. Y., and H. H. Battles, Philadelphia, Pa.

DAYTON, O.—Ernest L. Seitner, the florist, died January 2, aged 71 years. He was born in Germany in 1823 and came to America in 1853. His wife died nearly fourteen years ago. He leaves five children.

TOPEKA, KANS.—Christmas trade and retail prices were about the same as last year. Supply short. Greater call for carnations.

Horticulture and Floriculture at Cornell.

BY MR. MICHAEL BARKER.

[Read before the Gardeners' and Florists' Club of Boston, January 8.]

The education of gardeners and florists has been often discussed, and apparently with but small approach to a settlement of the points at issue. Practical men in general are not in favor of the higher education for gardeners, and it is frequently stated that the common school years afford a sufficiency of knowledge wherewith to enter upon the pursuit of horticulture, leaving the practical education to be completed by a thorough course of training in the ordinary work of gardens and nurseries. Hitherto I have looked upon this as the best way to acquire a profitable knowledge of gardening in all its branches. A boy, for instance, graduating from the grammar school may begin work at once, and in five or six years become quite competent to command an income sufficient to provide the necessities of life; and in the case of the vast majority of boys this is the main question. There are many, however, who aspire beyond this, and it has always appeared to me as most unfortunate that there are so few institutions where one may receive a high-class education and at the same time such experience in garden operations as would qualify him for a position as gardener.

Where in all the world is there one such establishment? Kew and Chiswick all lack much that is desirable. At Kew, indeed, the young gardeners are required to be generally competent before they can gain admission, and as might be expected in a place of its character, the lectures, observations and experiences there favor botany rather than horticulture. The Chiswick Garden of the Royal Horticultural Society is a much better place for training in the practical work of horticulture; but the facilities for intellectual improvement are much restricted, and the corporation, owing to financial difficulties, is, or was a few years ago, unable to expand to meet the requirements of the age. But in times past Chiswick has made many good gardeners, while Kew has only polished those who were already qualified. The Shaw Garden of St. Louis, as I understand it, aims to rival Kew, and as a consequence her gardeners will probably excel in botany at the expense of horticulture and floriculture. As a subordinate factor botany is of great utility to all horticulturists and floriculturists; but when all phases of gardening having to be examined through a botanist's spectacles, the science becomes a clog on progress. A good combination of the practical with the theoretical is most useful in the education of gardeners, and in this regard—in the way of a thoroughly practical education in horticulture and its allied arts and sciences—I can say without hesitation

that in Europe or America there is nothing equal to the practice and instruction afforded by the Horticultural Department of Cornell University.

It has been my good fortune to see and know something of all the more important horticultural institutions in England and the United States, and last July in looking over with Professor Bailey the material for instruction at Cornell, I was much surprised to find that a work of such superior quality had been going on quietly for years quite unknown to a large majority of the gardeners and florists throughout the country. The Horticultural Department of Cornell University has no delusive ancient history with which it might decoy those in search of knowledge to its fold; it is new in conception, modern in appliances and methods, and practical in all its work. The department was established in 1889, and its growth since that time has been healthy and rapid. The students have abundant opportunity to become expert in the general work of the farm, garden and greenhouse. They are expected to do something more than make a compilation of notes in the lecture halls. In the extensive orchards they have ample experience in planting, spraying, pruning, budding and grafting. Spraying has of late years become a most important matter in farm and garden work, and as in all other divisions of instruction the fullest and best practice and information is given under this head. The collection of spraying machines and contrivances, fungicides and insecticides, is one of the most complete to be found anywhere, and all new appliances and remedies are added as they appear and are tested repeatedly. The expert in spraying, Mr. E. G. Lode-man, is well known in this country and Europe to be one of the leading authorities on insects and fungi injurious to vegetation, as well as for the facility with which he can prescribe a remedy for any known pest.

Vegetable culture outdoors and under glass is given a large share of attention, and the raising of new and improved forms of our commonest vegetables is pursued in a manner that can not prove other than of the greatest value to all who may embark on a horticultural career. The students at Cornell do practically all of the work incident to the raising of vegetables under glass, and lettuce, cauliflowers, radishes, tomatoes, cucumbers, melons, mushrooms, etc., are among the crops grown annually. Their work, including the preparation of soils and manures, sowing seeds and in other ways propagating stock, potting, planting, tying and training, making and spawning mushroom beds, watering, ventilating, etc., is, of course, subject to competent direction, and it would surprise many able gardeners to see the excellent crops these beginners produce.

Just at this time there is a crop of tomatoes in full bearing which would be creditable to any expert, and every operation in connection with the same has been performed by regular students.

The leading plants and flowers of the florists, notably roses, chrysanthemums, carnations and violets, are similarly grown in quantity, and the work of their propagation (including grafting and budding), potting and planting, staking and training, disbudding and crossing, and treatment for diseases and insects is likewise relegated to students with very marked success. The merits and defects of various systems of heating, glazing and ventilation come under their observation daily, and there is much practical work of the most useful character in piping, glazing, the construction of benches and the application of shading materials in which they participate all through the college year. This is supplemented by similar work in the greenhouses of the Botanical Department, where there is a large and varied collection of palms, ferns, orchids, cacti and other exotics. And the work of the lecture halls and laboratories covers the fields of agricultural chemistry, botany, horticulture and floriculture, so far as theory is concerned, as perfectly as the best practice is demonstrated in orchard, garden and greenhouse.

The most complete garden library in this country, so far as I know, is that of the Massachusetts Horticultural Society, and that of Cornell University certainly stands second. But if the present rate of increase in number of volumes continues very long, Cornell will speedily advance to first place. I do not mention this with a desire to convey the impression that any number of books will ever make a gardener; but as much of our advance is due to the faithful records of work done in similar directions by our predecessors, I refer to the matter simply to show that nothing is neglected at Cornell which will tend to promote the interests of the student. And in the same way I may call attention to the garden herbarium—the most extensive thing of the kind in existence. Speaking in a botanical sense, there are some herbariums of far greater extent and importance; but from a purely horticultural standpoint the Cornell collection of dried specimens of cultivated fruits, flowers and vegetables is unrivalled. Many students of garden botany have found this herbarium to be of great service in tracing the origin of numerous forms of cultivated vegetables. The herbarium is one of the many good works of Professor Bailey, and it will perhaps be interesting to record that he regards it as his best assistant. In some investigations of garden beans, of which, he says, there is a great deal yet to be learned, he has found this herbarium of immense utility. I might go on to speak of many minor collections, among which is one of three thousand photographs illustrating varied phenomena in the lives of garden plants, but on these points sufficient has been said to indicate that horticultural education on a solid, lasting and profitable basis has only begun.

Aside from the regular work of instruction, all the officers of the department have special experiments and investigations in hand in the interests of horticulturists and floriculturists in general. The students may keep records of the progress made in such investigations, and in that way gain valuable knowledge and experience. All new plants, fruits, vegetables and flowers sent to the department are thoroughly tested, and the results of such

tests are printed and distributed gratuitously among interested parties. Novel inventions and appliances, fungicides and insecticides, etc., are treated in the same manner. Efforts are being made to improve our native fruits, and foreign varieties of standard fruits are introduced and tested as to their reliability in our climate. A careful watch is kept on the vegetables imported from foreign countries and grown in and about immigrant settlements, notably such as are introduced by the Chinese and Japanese. Many of the plants, particularly garden vegetables, which these people of the Orient have brought with them and established around their new homes are of great importance to the student of economic botany, as in some cases they undoubtedly afford a better clue to the origin of some of the occupants of the kitchen garden than any we now possess. Some of our most valuable vegetables have been in constant cultivation from a period so very remote that their original types in many cases cannot now be identified, if they exist at all in the earth to-day, and if the more primitive types introduced by the modern generations of Mongolians assume any of the characteristics of our own products, it will be a distinct gain to have these records of their quality and character when first established in this country. Whether any of these imported vegetables ever attain to anything like the high quality of our own produce is a question which we cannot hope to see solved for many years to come. But in any case the records retain their utility, and as at Cornell some of the imported plants have already been crossed with the commoner kinds of Europe and America, it may be that at some time we may find greater light on this interesting subject.

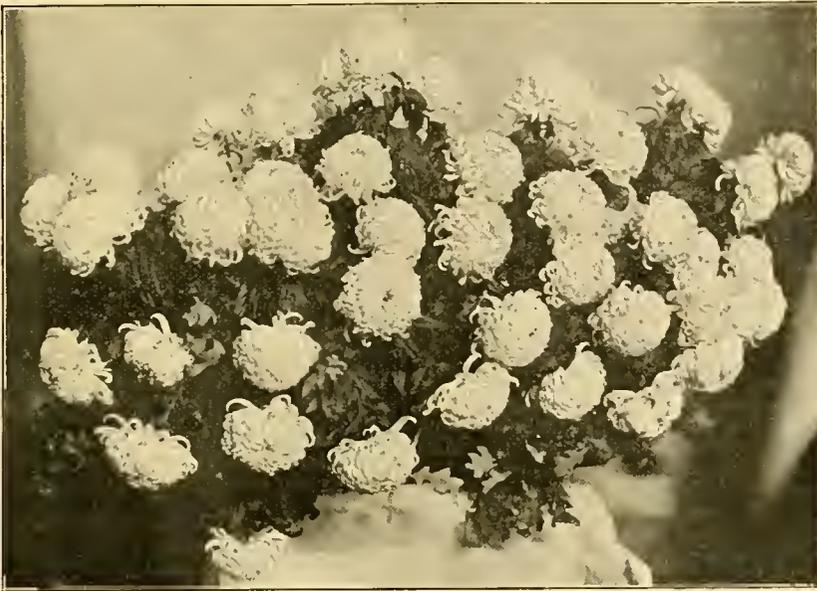

An investigation of perhaps more immediate concern to florists is one now being carried on with the common callas of our greenhouses. It is known that the calla in its natural state exists under periodical seasons of drouth and moisture, and the common practice in cultivation, as you are all aware, has been to imitate the natural conditions by alternating the periods of rest and activity. In this it has been found that callas under amended treatment will continue to grow luxuriantly throughout the year, and that their physical character is somewhat changed by the novel conditions. That the plants produce a greater or lesser number of flowers under this system is a matter so far undetermined, but one which will be announced in due time. In like manner it is known that those begonias which are cultivated for their flowers generally produce a large number of pistillate or female blooms. Ordinarily the female flowers are not so showy as the staminate or pollen blossoms, so that obviously it would be an advantage to influence the plant in such a way as to make it produce more staminate flowers and fewer or none of the pistillate order. It is generally believed that the application and lack of food produce opposite effects in the development of sex in the flowers of monoecious plants; but the data on the subject is hardly sufficient for practical purposes, and our object is to gain such a knowledge of the matter as may render it serviceable to gardeners and florists.

While speaking of begonias, I should perhaps refer to the nomenclature of the genus. This group of plants, embracing both the foliage and flowering species, hybrids and varieties, is undoubtedly the

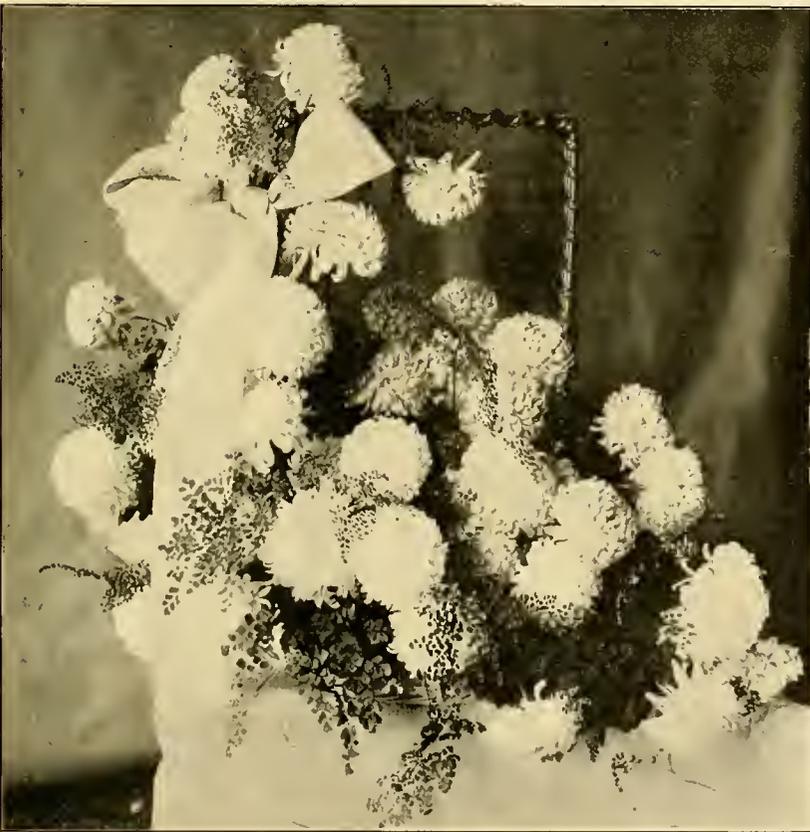

most popular for indoor cultivation with all grades of gardeners. There is a large number of species and their attractive qualities have led to the production of a large number of hybrids and varieties. Many of these plants are so much alike and there are so many synonyms that even now the catalogues have the names badly mixed. It is desirable that the evil should not be allowed to extend and Mr. E. G. Lodeman has entered upon the task of unravelling the tangle before it becomes too intricate, and in this I would here solicit for him the cordial assistance of the fraternity in all parts of the country. At Cornell we have one house devoted exclusively to the cultivation of begonias, and a list of such kinds as we now possess (which will be mailed to all growers of these plants) is now in preparation. Many kinds, especially hybrids, are still lacking in our collection, and growers are kindly requested to aid in the work by forwarding seeds or cuttings of any uncommon sorts they may be able to spare.

We are also engaged in a series of investigations touching on the troubles and problems which beset chrysanthemum growers, and a preliminary bulletin reviewing the present situation in some important chrysanthemum matters will shortly be issued. There is here a large field for useful work, and with the support of the growers in supplying material we hope to be able to accomplish some of it. The scope of these investigations is better outlined and discussed in the bulletin already mentioned, and at this time I need only refer to some of the heads under which we feel certain there is plenty of room for improvement. One of the most pressing of these is the classification of varieties. The matter of fungous and insect pests is assuming serious proportions, and needs prompt and effective ventilation. It is also hinted that we are threatened with bacterial troubles, and there is no telling what other plagues may seize upon our plants in years to come. But we must be prepared for all emergencies, and the growers of the United States and Canada can rest fully assured that all questions submitted to us will have our most prompt and careful consideration. We are well equipped with experts in culture, fungiology, vegetable pathology and entomology. The utility of the various commercial fertilizers in chrysanthemum culture is another matter which requires extensive experiment, and one to which we propose to devote some time during the coming season. Grafting the various weak growing varieties on a vigorous stock with a view to the production of good specimen plants is an experiment yet to be tried in this country, and the trial of new varieties, all grown under the same conditions, to ascertain the degree of annual progress, demands some of the space at our disposal. The various systems of culture also should be properly compared, but that we shall be able to enter upon this question is doubtful, the greenhouse space at command being now fully occupied. In these matters, again, we must look to the growers for co-operation and assistance, and past experience informs me that our expectations shall be fully realized, as where it has been possible the patrons of horticulture and floriculture in America have been most generous in supplying needed material.

Violet growers are harassed by numerous difficulties generally traceable to disease in some form. The extent of these troubles may be imagined from the fact that one grower has in five years lost no

NO. 2. SECOND PRIZE. ARRANGED BY J. M. GASSER.
CHRYSANTHEMUM BASKETS AT THE CHICAGO EXHIBITION.

less a sum than six hundred dollars through the diseases to which these plants are subject. We have collected all the varieties of the violet cultivated in the United States, and these, with new varieties expected from Europe, we propose to propagate and treat systematically to ascertain their respective merits, comparative immunity from disease under the several methods of cultivation, and to experiment with a view to subjugating the disease where it makes its appear-

ance. Considerable space is given to roses and carnations, and we are hopeful of being able to secure sufficient funds to enlarge the accommodations for these plants so as to permit of desirable experiments with them. A good piece of ground has been set apart for a test of all the varieties of the canna during the coming season, and in this we shall be pleased to include plants of every kind sent to the department. A prominent feature of the place is the experiments

with electricity. The electric light is employed, principally in forcing vegetables and flowers; and as the work in this direction goes on it is anticipated that some results of great importance to those who grow plants under glass will be obtained. Some of the advanced students are doing good work in the laboratory greenhouses in demonstrating the effects of fruit bearing upon the mechanical tissue of various plants, and in studies of the physics of greenhouse roofs. The latter experiments, entailing the cultivation of average greenhouse stock under roofs disposed at varied angles and glazed with all the qualities and colors of glass in the market, employing both the lapped and butted systems of fixing the material, are of peculiar interest to all greenhouse men.

Having noticed thus briefly some of the more conspicuous phases of horticulture and floriculture which are given attention at Cornell, I think it may be safely assumed that any young man of ordinary intelligence who observantly goes through the general routine of work which they render necessary, should in a short time become a gardener or a horticulturist of no mean ability. And young as is this department of instruction at Cornell there are many of her horticultural graduates occupying positions of much importance in all parts of the country. Among the Cornellians who have taken full advantage of these opportunities are some whose names at least are familiar to most of you, such as Mr. Willis N. Rudd, secretary and superintendent of the Mount Greenwood Cemetery, Illinois; Mr. C. J. Pennock, the carnation specialist of Kennett Square, Pa.; and Mr. C. D. Beadle of Biltmore, North Carolina, said to be the most expert propagator of hardy stock in the country.

THE RETAIL TRADE.

The Arrangement of Flowers.

XVII.

CHRYSANTHEMUM BASKETS.

The three illustrations presented herewith are from photographs of the prize-winning baskets at the late Chicago exhibition.

In considering the arrangement of chrysanthemums in baskets it certainly is a fact that the flowers that best meet the standard of the grower to-day are difficult to combine into a really graceful arrangement. While stoutness of stem is desirable in many cases, in certain positions this characteristic is a decided detriment. The basket in our first illustration is filled with the variety Mrs. Jerome Jones, and while the individual flowers are fine, with stems that are surely up to the standard as to stoutness, and each bloom is fully displayed, it is simply a display of flowers and nothing else. This arrangement consists of a large sized splint market basket filled with moss, into which are placed about 50 blooms, the outside of the basket being covered with autumn foliage. Such a basket as this, however, being so large and unwieldy, is seldom if ever called for. Its cost would probably stand like this, 50 "mums" at 25, \$12.50; basket and foliage \$1, moss 25 cents, total \$13.75, and could therefore be furnished at a profit for \$25 to \$28.

The second illustration shows a combination of The Queen and Ada Spaulding arranged in a celluloid basket with gilt handle. The treatment of the material in this basket is of an entirely differ-

ent character from the former. It is a fine example of the florists' art, and shows what can be accomplished with such material. The Queen belongs to that class of large sized blooms best adapted for arrangement in vase or basket. The stem of the flower is not so exceedingly stiff but that it will yield to a desired form. Ada Spaulding also is a variety suitable for arrangements and the two make a very good combination. As will be seen in the photo the flowers are carried on the left hand side up to top of the handle, which is tied with a broad pink ribbon. The blooms in the body of the basket are of uneven height and interspersed with Adiantum cuneatum. There are strong objections by many against the use of adiantum in any form in chrysanthemum arrangements. We have ourselves expressed the opinion frequently that the small and more delicate forms such as cuneatum, gracillimum, etc., seem out of place. It must be admitted, however, the style and character of the arrangement must be taken into consideration. There is no doubt that in such a style of basket as we have under consideration some variety of fern is not only admissible but even necessary. At the same time we should say that A. princeps, for instance, seems better suited in combination with large flowers. It takes about 3 dozen good sized blooms to fill a basket of this kind, which at 25 cents each will cost us \$8.50, basket and moss \$1.50, adiantum 50 cents, 3 yards ribbon \$1.50, total \$12. At retail the basket would bring \$20 to \$25. It is, however, not necessary to use the highest priced material and the cost would of course vary with the quality. The same general effect might be produced at a much less cost.

The third illustration is an oval white willow basket with high handle. This is filled with about 50 medium sized Eugene Dailedouze arranged with Asparagus plumosus. If a basket is of sufficiently large size this variety is one of the best of its class for the purpose. The use of A. plumosus is commended by some and condemned by others. We are of opinion that the asparagus is rather detrimental to a good effect as the chrysanthemum seems to lose its individuality to a certain extent in connection with it. The cost price of such a basket would be, figuring the "mums" at 20c, 50 blooms, \$10; basket \$1, asparagus \$1, total \$12. Selling price \$20 to \$25.

But there are many other varieties far better suited for decorative purposes than the above. Most of these, however, have almost entirely disappeared from our markets, and it is in vain we look for them even in our exhibitions. Take for instance the anemones, most all of which are admirable in a decoration, and then again the single varieties which are also good, and take the type of which Belle Poitevine is a good representation, and our old favorite Snowball.

CHRYSANTHEMUM VASES.

Last November Mr. Grove P. Rawson sent us a box of chrysanthemum blooms which among other varieties contained a lot of Belle Poitevine and the beautiful anemone James Weston, saying that he found them exceedingly useful in adding grace to arrangements of chrysanthemums. To show what could be done with these two varieties we arranged them in a vase and had them photographed as shown in the accompanying plate. Note the graceful way in which the blooms of Belle Poitevine dispose themselves. The yellow centers of the anemone variety added a charm to the

arrangement that the engraving does not convey.

The box contained also a lot of Kiotos, the stems of which were twisted in a most grotesque fashion. Such flowers, if put on the market, would probably find few buyers, and yet they are useful in a vase arrangement, although we may find it necessary to use in connection with them some other variety with a straighter stem. In our illustration Harry Widener was used in combination with them.

Decorations at the White House.

The public reception of President and Mrs. Cleveland on New Year's day was properly speaking the beginning of the social events of the season at the Capitol. It was attended by an unusual number of persons in all stages of society, from the dignitaries of the foreign world to the honest laborer, the president and Mrs. Cleveland grasping the hands of each alike. The large East Room was handsomely decorated for the occasion. The large old fashioned window on the east side of the room was banked from the floor to the ceiling with palms, pandanus, crotons, marantas, dracaenas, aspidistras and ferns, brightened by the brilliant poinsettias. The six huge mantels beneath the great mirrors framed in white and gold were banked with small palms, crotons, marantas, pandanus set in white celluloid baskets, dracaenas and ferns fringed with asparagus. The two mantels on the north side were banked with double white primulas. The three massive crystal chandeliers were draped with garlands of smilax. On either side of the entrance into the main corridor were two fine specimens of dracaenas. The mass and profusion of all varieties of foliage and decorative plants brightened by gay colored flowers offset the fresh new white and gold finish of the ceilings and walls of the beautiful East Room.

The Blue Room was of course the center of attraction, it being the reception room for the day. Here the massive gold framed mirrors were draped with smilax, looped back after the fashion of portieres. The west mantel beneath the mirror was banked with adiantum, the centerpiece being a fine specimen of Angraecum eburnum superbum, having two very large spikes of bloom. Concealed in the bed of adiantum were the following orchids in baskets: Lælia Arnoldiana, L. autumnale atro-rubens, Cattleya Trianae, Cyripedium venustum and Io, with four plants of begonia President Carnot. The east mantel was banked with adiantum studded with camellias, roses, Begonia Saundersonii and Romans. The entire north side of this room was banked with foliage and flowering plants forming a background for the receiving party.

The Green Room mantels were banked with foliage and flowering plants. The mirrors were draped with smilax.

The mantel in the Red Room was done with double white primulas in jardinières of bright red. The long corridor connecting the last room with the state dining rooms is furnished in the same warm shade as the red room, and was decorated with foliage plants. The decoration of all these rooms, with the exception of the East Room, was under the direction of Mr. Henry Pfister, who has charge of the White House conservatories. The East Room was decorated under the direction of Mr. G. H. Brown, superintendent of public grounds, who always has the arranging of this room. REYNOLDS.

Carnation Notes.

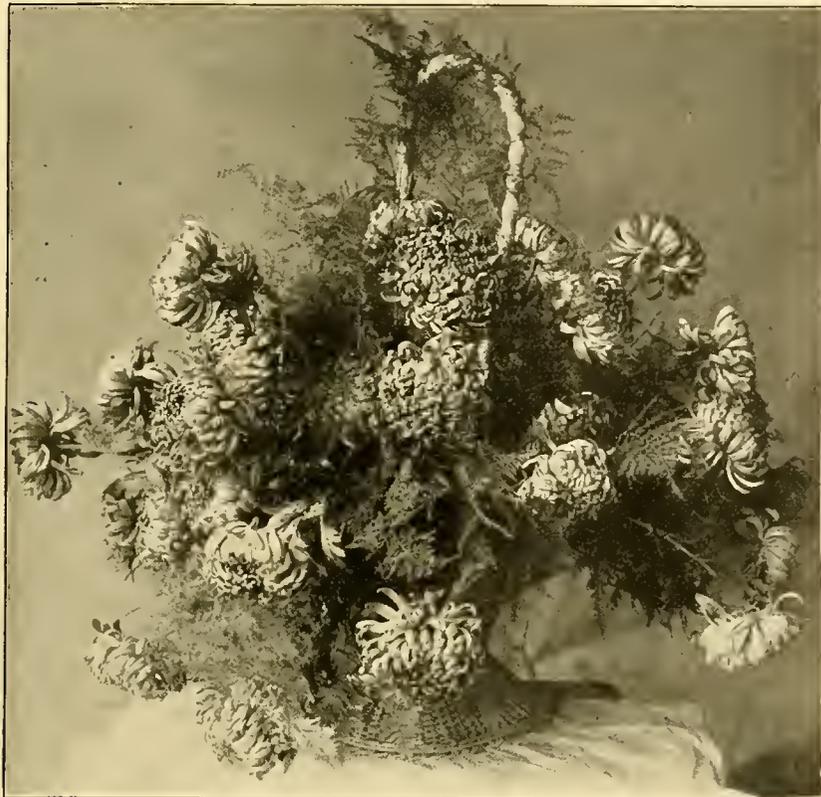

In looking over an old book by Thos. Hogg, published in 1839, I find that no carnation less than three inches should ever be staged. Would it not be well to make a rule similar to this in all exhibitions at the present time? True, the carnation of that period was not the exact type that we are growing to-day in this country, and, by the way, Mr. Hogg wrote his book in England and on English stock. I find that the florists then had to give their plants much more care to obtain fair results than the majority of us give our stock to-day. The flowers were all produced during the summer from plants grown in pots from time of rooting, which was done both by layering and from cuttings. The former method was used mostly because a greater proportion rooted; the latter made the best plants. Cuttings were made the latter part of July and rooted in rich sandy soil, and after rooting (in soil composed of about one-half manure and the balance loam) the plants were carried over winter in frames.

There has been much talk about the size of carnations; how large can we get them? and what is the limit? Mr. Hogg said nearly sixty years ago that no flower should be exhibited that did not measure three inches in diameter; would it not be well to rule all flowers less than three inches out of our exhibitions? We know they can be grown considerably larger, and it seems as if a rule of this kind would greatly increase the quality of an exhibit. Some may say to this "You would not get up much of a show with such a rule," but would not the quality more than compensate for the loss of a few poor exhibits?

It is unfortunate that the general idea of those interested in flower shows is that the people want great masses of bloom, and that only such a display will draw a crowd. I believe this to be a mistake, and I will venture to state that at the show in Boston next February the greatest attraction will be the new seedlings of which only six blooms are required—this class will bring out many new sorts, and he who has flowers that will not measure over three inches will be outclassed in every shade and color.

Referring to Mr. Dorner's remarks in these columns December 22 concerning carnation Uncle John, I think he has been misinformed about his favorite white showing rust. The fact is that many growers in this section found rust developing on Uncle John shortly after planting outside last spring; the pest did not wait until it had been housed. Nevertheless the plants did make an astounding growth considering the dry season, and this fact alone is greatly to its advantage and should induce everyone who has stock of it now to rid it of the rust and also bacteria, to which it is subject, but which can be cured by giving it plenty of air, room and lots of manure water, a dose I find it relishes highly.

The great trouble I have found with this carnation, as I have stated previously, is its tendency to sport, many of the plants throwing up semi-double flowers. I have found, however, several that are certainly

NO. 3. THIRD PRIZE. ARRANGED BY W. J. SMYTH.
CHRYSANTHEMUM BASKETS AT THE CHICAGO EXHIBITION.

grand, and from these I shall work up a stock, as I believe it can be made to pay better than McGowan, the flowers coming very large, and of perfect shape at all times.

Mr. Dorner says that if the plants had been infested with rust they would not have grown as large as they had done all over the country. I have seen the rust on some of the strongest plants and it apparently had no effect upon the growth, for the plants after being housed furnished an abundance of flowers. Why so many growers whose plants of other sorts were full of rust should have thrown out their whole stock of Uncle John is a pertinent query, for they all recognize the fact that this is a very fine white; they evidently think because it is new and shows the rust that it must be bewitched, and therefore a fit subject for the flames. I only hope that with the few plants I have I can be able to work up a stock that will be as profitable as Mr. D.'s stock has been to him.

CHARLES H. ALLEN.

Chester County Carnation Society.

The January meeting of the society was held at Kennett Square January 5, the attendance being good. It being the annual meeting of the society the election of officers was held. The following were elected unanimously: President, J. H. Ladley; secretary, W. R. Shelmire; treasurer, J. J. Styer. As a standing committee, whose duty it should be to present subjects for discussion, the president appointed C. S. Swayne, C. P. Barnard and Louis Eastburn.

Mr. David Rust of Philadelphia was present at the meeting and gave some additional light on the scheme of a Philadelphia flower exchange. The most serious objection to the plan as suggested was that the large growers would not

give up contracts with parties outside of the city, and the proposed grading of flowers has not met with general approval. Edw. Swayne thought the only successful exchange would be one that would sell each grower's flowers on their own merits. Pres. Ladley regretted that more progress had not been made towards the desired end, but felt that we were moving forward.

C. J. Pennock suggested that the society make a contribution to the guarantee fund of the American Carnation Society for its exhibition, to be held in Boston in February. The sum of \$25 was voted for this purpose.

C. S. Swayne, in response to an inquiry as to the success of his new greenhouse, stated that he considered it almost a perfect success. It had now been tested in severe cold, high wind and snow. This house is 100x50 feet, single slope, with a fall of but 9 feet.

Sec'y Shelmire reported that a house thoroughly lighted with electric light had shown a perceptible gain over other houses not so lighted. These lights were incandescent. He believes that with a properly constructed arc light the result would be beneficial, but probably would not be profitable. Instances were cited where the direct rays from a strong arc light had been very harmful to the growth of plants. Jos. Phillips thought the experiment would be of doubtful benefit, giving the plants no time of rest. Sec'y Shelmire referred to the experiments of Prof. Bailey at Cornell University, showing that plants of some kinds at least grew better under continuous light.

The exhibit of flowers, while not so large as usual, was very good. Chas. T. Starr showed Louisa, light pink, Mrs. Chandler, rose pink, Chas. T. Starr, scarlet, and others unnamed. Thompson Bros.

showed Lawrence Thompson, pink, and a fine large variegated flower. C. P. Barnard exhibited Cæsar seedlings, scarlet and crimson. Jos. Phillips showed a light pink seedling, Chester Pride X Grace Wilder, strong grower and very productive. Sec'y Shelmire had a clear yellow and two scarlets.

Mr. Rust stated that many carnation plants had died in the houses around Philadelphia, and the trouble continues. Considerable discussion as to lifting followed, showing a general leaning towards earlier transplanting from the field, and lifting, in light soil at least, at a dry time. As usual there was a contrary opinion. Mr. Eastburn reported digging his Daybreak at the close of a three days' rain with the best of success.

C. J. Pennock called attention to a new insecticide, "Lemon Oil," recommended for red spider, etc., a foreign product, spoken of very highly, and which he is testing.

Sec'y Shelmire suggested the desirability of having a committee to put the stamp of the society's approval upon seedlings as offered by the members. On motion a committee of three was appointed to pass upon seedlings as presented, none to be considered unless they are at least two years old. C. J.

Weak-Stemmed Portia.

Will some one kindly advise me why my Portia carnations are coming in with weak stem, seemingly to be hollow? What is the best temperature for them, or do they need to be grown cooler than other varieties? J.

"J." should grow Portia 50° at night, or a trifle lower will do no harm; 60° day when cloudy, 70° to 75° day when sun shines. Do not water overhead, and Portia like all other carnations will stand good rich manure water.

CHARLES H. ALLEN.

Answers to Questions.

No, I do not approve of syringing carnations, especially through the months of November, December, January and February. I have found very little trouble from the red spider during these months when ventilation and temperature are properly attended to, and the plants are in a good growing condition. A watchful eye can prevent their spread as they generally first appear in spots, and can be kept in check without subjecting the whole house to danger. But if the little pest takes a spread over the house energetic measures have to be taken and syringing is the only remedy. Do this on a sunny day at noontime, when the little insects revel in the warm sunshine. If you have a good pressure on your hose, and your benches have a good drainage, fire the water in a fine spray in and around and underneath the plants with force. No amount of water will hurt the plants if it can drain off in time. One thorough application once in a week or ten days is more effective in destroying the red spider, and less dangerous in fostering fungoid diseases, than two or three casual sprinklings a week overhead, when the water most times will not touch the spider, but is enough to keep the body of the plant constantly wet and invite fungoid diseases.

If the solution of sulphate of copper and ammonia is used as a preventive an application once in two or three weeks is sufficient. If used as a cure I would make it stronger and use it two weeks in

succession, but after this wait two or three weeks again. Ammonia is food, and there is danger from over feeding. I do not think that the copper would hurt, but to be effective it has to be thoroughly dissolved, and that takes a certain quantity of ammonia. When the solution is mixed with the water it should leave the water clear and only give it a bright blue color.
FRED DORNER.

Lack of Foliage on Lizzie McGowan.

My Lizzie McGowan carnations are throwing single stems very deficient in foliage, the flower stems being quite bare from the soil to a few inches below the flower, where there are a few side shoots. Can any one account for this peculiar growth?
SUBSCRIBER.

Dark weather will often produce results as above. I judge that during cloudy days you have allowed your soil to become a trifle too dry, very bad. An unusual number of side shoots is sometimes the result of a check in growth of stem due to cause stated.

CHARLES H. ALLEN.

Nitrate of Soda as a Stimulant.

A subscriber writes as follows: "I see Mr. Chas. H. Allen gives a recipe to prevent the bursting of the calyx of McGowan carnation, a stimulant of nitrate of soda, one pint to 50 gallons of water. Nitrate of soda comes in a crystal or scale costing 60 cents an ounce here. Thought there was a mistake, or it must be dissolved and used at a percentage. Would be thankful to know how it is."

Nitrate of soda will not alone keep the calyx from bursting, but it serves as a stimulant and tends to develop the buds quicker. I have found that a night temperature of 55° will lessen the bursting very materially; 50° I believe is too low. As to the cost of the nitrate of soda, I cannot imagine where subscriber purchased his supply, as it should not cost over fifteen cents per pound, and can be purchased of any wholesale druggist at this price.
CHAS. H. ALLEN.

How to Lay Out and Plant an Acre Plot for a Suburban Residence.

BY JOHN CURWEN, JR.

[CONCLUDED FROM LAST WEEK.]

If you have uncongenial neighbors so that you do not want to leave the lawns open, put up a fence of wire with cedar or iron posts, and plant vines over them. Clematises, roses, honeysuckle, trumpet vine, wistaria, etc. Do not trim them too much, but let them grow naturally and mingle with each other. Mention has been made of the hedge in front. California privet has lately come to be used to an enormous extent around Philadelphia and deservedly so, for it grows quickly when wanted for a screen, while on the other hand it will stand being trimmed to a very dense, low hedge, and has the further advantage of being cheap.

If greater protection is needed against stray animals, put the wire fence along the front too, but cover with only one kind of vines; or drive stout stakes in among the hedge plants, fastening the wire to them, and as the hedge grows if properly trimmed the plants will support the wires by the time the stakes are rotted off. It is a common practice to have simply a heavy chain stretched between posts to close the entrance to the drive when necessary, which is not often.

The best climbers for the porches are those which give the best shade and are least liable to disease or insect foes, for the remedies usually necessary to keep them off are often offensive either to the eyes or nose or both. Such should be used on the fences, posts or stumperies at a little distance from the house.

Be careful of the wistaria, for it will, if neglected twist the trellises out of shape and even break quite heavy woodwork. Planted over an old tree where it can run over the branches or on a stout post, where it will grow in tree form it is very attractive.

You have been wondering where the florist's share of the planting is to come in; well he is "in it" to a certain extent, but he must be a grower of hardy herbaceous plants as well as of geraniums, colens, etc., if he wants a very large share; for these latter are not to monopolize the flower beds by any means, but to fill up vacancies left by the early blooming perennials. Formal beds have their place such as a border along the porch or a mass of brilliant bloom against a background of shrubbery. A good knowledge of the various plants is necessary in planting the herbaceous border, to secure continuous blooming, and proper proportion in height. With proper selection such a bed will furnish abundance of bloom from March to November, and in a mild winter almost the year round.

There are many points which cannot be touched in a short paper of this kind; but let me recommend to any one who is interested in these matters, the magazine *Garden and Forest* which many of you are no doubt familiar with as the highest authority in such matters, then the amateur gardening papers and such books as Parson's "Landscape gardening," Ellwanger's "The Garden's Story," etc.

TWENTY ANNUALS:—Nearly all of these may be grown easily from seed:

Alyssum.
Asters (Truffaut and Comet).
Begonia semperflorans.
Canterbury bells.
French marigold.
African marigold.
Candytuft.
Carnation Margaret.
Cornflower, (bluet).
Cosmos.
Single dwarf dahlia.
Pinks.
Gaillardia.
Heliotrope.
Mignonette.
Nasturtiums.
Pansies.
Poppies.
Scarlet sage.
Sweet peas.
Verbena.

TWELVE HARDY HERBACEOUS PLANTS:

Narcissus in variety.
Lily of the valley.
Pæonies.
Iris, German and Japanese.
Pyrethrum (hybrid).
Coreopsis.
Delphinium (larkspur).
Hollyhock.
Bellflowers.
Achillea "The Pearl."
Sunflower (double and single).
Japanese anemone.

This list may be expanded by the following additions:

Phlox.
Columbine.
Poppies.
Dielytra (bleeding heart).
Asters.
Lilies.

Candytuft.
Chrysanthemums.
Funkia.
Hemerocallis.
Snowdrops.
Crocus.
White rock cress for massing.

New York.

The customary period of inactivity which we have learned to expect during the first two weeks of the year is now on and is none the less discouraging from the fact that it was expected. To convey any adequate idea of the demoralization that prevails in wholesale cut flower circles is next to impossible. In the whole range of cut bloom from the choicest down to the most inferior the stagnation exists and no one thing can be singled out as being more fortunate than the rest. Instead of attempting to describe present conditions in detail we will simply call attention to the record of past years which shows that unvaryingly about the middle of January a most pronounced revival has set in and it is not unreasonable to hope for a repetition this year or to look for possibly the beginning of improvement to appear by the time this note reaches our readers. The warm weather prevailing at time of writing which has the effect of emphasizing the glut can not continue long and wintry weather may help to bring much needed relief.

Pitcher & Manda have begun work on new grounds for herbaceous plants at Short Hills. The new tract comprises 75 acres and particular attention is to be given to the cultivation of useful specialties for florists' cut flower purposes. Another improvement at this establishment is the removal of the seed and bulb department to commodious quarters provided in a new building. In looking through the greenhouses one is forcibly struck with the large number of young kentias, arecas and other commercial palms. This is a gratifying pointer for it gives promise that the time is not far distant when in this country will be grown all the palms required for our own consumption. The salesmen report that they find interest reviving in show pelargoniums and the sale of Adiantum Farleyense both as plants and cut fronds increasing enormously. Marantas and dracenas on the other hand are apparently losing ground. Pandanus Veitchii is in very short supply and the demand can not be met. In the orchid houses there is promise of a gorgeous display of cattleyas and odontoglossums to come. Among the choice bits now in bloom are a very fine variety of Vanda cœrulea bearing a spike of 20 flowers, a Cypripedium Hebe purpureum and C. Leeanum and Arthurianum in profusion. The demand for orchid and anthurium cut blooms has been very gratifying the present season.

Great plans are being perfected with a view to making the forthcoming dinner of the New York Florists' Club an occasion which will eclipse all previous attempts. The decorations of the table will be unique, Mr. Warendorf promises, and contributors of flowers, etc. for this purpose can materially assist in securing this by giving advance information to the committee of the quantity and character of their intended contributions.

Twenty-eighth street is to have another accession to its list of wholesale florist establishments about February 1, when John Young will move from his present place on 30th street to 51 West 28th,

BELLE POITEVINE AND JAMES WESTON

KIOTO AND H. E. WIDENER.
CHRYSANTHEMUM VASES.

where he will have more than double his present room. Johnnie is everywhere popular and that he will secure his full share of the patronage with which 28th street is favored is a foregone conclusion.

Wm. Plumb, who has been in charge of Westview Floral Co.'s business at Atlanta, Ga., for the past two years, has returned to New York not over favorably impressed with the conditions of life in

the sunny south and willing to go on record to the effect that "New York is good enough" for him.

Edith Helen Taplin, youngest child of the late James Taplin, died on January 2d at the age of 26 years, after a six months illness with consumption. The funeral took place from her late home at Maywood, N. J., on Saturday, January 5, and was attended by many of the craft, to whom she had become endeared by her sweet disposition and patient fortitude.

News has just arrived of the death at Alexandria, Egypt, of Miss Gertrude, daughter of Paul Wilcox, rose grower of Montclair, N. J.

August Rolker & Sons have been appointed sole agents for New York and neighboring territory for the "Rose Leaf" extract of tobacco.

Lord & Burnham have opened a city office at 160 Fifth avenue with Mr. Lincoln Pierson in charge.

John A. Scollay and U. G. Scollay are both suffering from a severe attack of the grip.

H. A. Hoffman has moved from 24th street to 54 West 28th.

"The Rosary" has opened recently at 275 Fifth avenue.

Philadelphia.

Things have been quiet the past week in the stores, while the growers have been actively engaged in cutting flowers. As a consequence prices have declined like a sled on a toboggan slide, and there is great dissatisfaction in the growers' camp. When prices take their annual Christmas flight and roses rise from \$3 and \$4 a hundred up to \$15 and \$20 inside of about one week's time it is the retail dealers who do the kicking, while the growers view their padded slips and tell each other with more or less truth the great prices they got for their flowers. Now it is the dealers turn and as the hustlers hurry around from one store to another viewing well filled windows and ice boxes and trying to dispose of their stock at what they call the market price they find it different, very different, as prices have no stability and there seems to be no market price. It nearly broke one grower's heart when he found good Brides and Mermets had fallen from \$12 to \$10 when he supposed they were fixed at the former figure for a week or two, and next day when he came into town to see about it and found good stock selling for \$8 he had lots to say about the weak kneed growers that let the dealers make the prices. All the large teas are now (January 9) bringing \$8 to \$10, a few extra select are probably sold for \$12, but the bulk of the good stock is sold for \$10. Smaller roses, Perles, Gontiers, Cusin, etc., bring \$4 to \$6, the latter figures prevailing for most of the stock sold. Beauties are to be had at all prices, \$7.50 per dozen being the top notch, and from that down according to quality. Good flowers with from 15 to 24-inch stems bring from \$5 to \$6 per dozen, while 10 to 15-inch bring \$3 to \$4.

John Burton is sending some fine Belles, as good as Beauties in every respect, and a beautiful shade of pink. His stock of Beauties and Belles has been very fine all season.

All the stocks of roses now coming in are fine; Meteors, Brides, Mermets, Bridesmaids, Testouts are now to be had in large size, perfect form and color. Bridesmaid, Testout and Meteor are away ahead of last year and are no longer experiments, but have joined the bread winning class.

Carnations are becoming more plentiful, and as a consequence prices are down; last week any kind of a presentable flower brought \$3, now only the best will bring that sum; \$2 to \$2.50 is asked for good ordinary. Double violets are in good supply, and \$1.50 is top figure except for a very few fancy.

The January meeting of the Florists' Club was held in Dumler's Hotel opposite the hall, as the old room was flooded out with the rain. There was quite a good attendance, and while the paper on double violets was not read, a very interesting account of a visit to Mr. Vanderbilt's estate near Asheville, North Carolina, was given by Mr. Craig. He spoke of the work being done there, of the miles of roadways being laid out, and the borders planted with all kinds of shrubbery. Over a million plants were being raised each year and planted, and the whole place was one vast experimental station. Ex-President Smith thought so much of the place that he thought the S. A. F. should hold their annual convention there in the near future, as it would be to the advantage of every florist and landscape gardener to view this estate. Mr. Craig also spoke of the great work done by the tree commission in Washington, and hoped to see the same plan adopted in this city.

A regular attendant is to be at the club rooms every afternoon and evening, and it is expected there will be more life around there the balance of the season. It is not likely the building of the hall will be commenced until spring.

A very good white carnation was exhibited by C. J. Pennock called Kohinoor; it is a large flower on a fine stout stem and seems like a very good variety.

Mr. Christy also showed a very pretty light yellow with streaks and dots of red, it is a very pretty thing and is called Sunshine.

Mr. Arthur Mallon Jr. has sold his Ridge avenue business to Mr. Wm. Nakel, formerly with Hugh Graham. K.

Chicago.

Once again there has been a revulsion in trade almost unprecedented. Prices in roses particularly have taken a tumble such as is witnessed but seldom. It is not for the reason that stock is so very abundant, although the supply is fairly good, but business the past week has been almost at a standstill. In local retail circles there was practically nothing doing. The few orders for decorations here and there hardly caused a ripple on the surface of the market, and down, down went the prices until they reached a summer level. Fairly good roses were sold at 2 cents, and job lots for considerably less. Beauties have suffered little, first quality being \$4 to \$5 per dozen. Bridesmaid is in excellent demand, and so is Testout; best quality of these go at \$6, with a few extra select a little higher. Brides of first quality have dropped to \$5 and \$6; most of the stock, however, brings much less.

Carnations have held their own fairly well. Good commons bring \$1.25 to \$1.50, and fancy \$2 to \$3, extra well grown in a few instances commanding the top figure of \$4. Violets have to be extra fine to bring \$1.50; the bulk goes at \$1 to \$1.25.

Bulbous stock of all kinds is still very scarce, except Romans, which are coming in more freely; these are in quite active demand at \$3 to \$4. Valley brings \$4, and is also quite active. Paper whites are slow at \$3 to \$4. Harrisii sells well,

and in spite of the general depression commands good prices. Some extra fine flowers still bring \$2 per dozen.

The shipping demand has been extremely quiet, but as prices are now down to rock bottom the commission dealers are looking for a more lively business in this direction.

Anthony & Curran have gone out of business as a firm, their place of business on Wabash avenue being closed January 10. J. T. Anthony will continue at his old place, 3425 Prairie avenue, while Joe Curran's present address will be 231 Wabash avenue.

Joe Craig closed his place at 82 State street January 6—no cards.

At the Florists' Club meeting last Thursday evening Mr. Ed. Winterson was elected financial Sec'y for the remainder of the annual term. At the next meeting Mr. W. L. Palinsky will read a paper on pansies and at the first meeting in February Mr. E. Wienhoeber will read a paper upon flowers not usually to be had at the wholesale dealers, but which could be profitably grown and would give the needed greater variety to the stock of the retailer.

Denver, Colo.

Christmas trade was not quite as good as anticipated, but quite fair after all. The demand for Beauties was not at all up to expectation, which was a good thing for us, as the supply was very limited. What were sold brought from \$15 to \$25. Good Testouts, Bridesmaids, Woottons, Brides, Kaisersins and other first-class stock sold readily at \$4 to \$5. Daybreaks brought \$1.25 to \$1.50, other carnations sold at \$1. Valleys sold at \$2, paper white at \$1, and other stock in proportion. Taken in all the holiday trade was not as good as past years.

Quite a lively competition has sprung up in the retail trade lately. The Park Floral Co. opened a fine large store at 1137 16th street November 1 and have been doing a fine business up to date; Mr. Chas. Theis is in charge. Daniels & Fisher, the largest dry goods house in the west, added a cut flower department to their establishment December 15, but as yet have not made any perceptible difference in the trade of the legitimate florists. (Probably on account of their not being able to secure any flowers in this market.)

N. Barkalow, late of Omaha, Neb., opened a retail store at 612 16th street December 1, but after a 30 days' trial decided that the profits of the floral business were not as large as they are thought to be, and being a good business man closed his store before he lost any money.

The Colfax Floral Co. report a fairly good trade at their two stores and a rushing trade at their greenhouses.

Mr. John Berry, the president of the Denver Floral Society, is visiting his old home in Ireland; will not return to this country until some time in the spring. During his absence Mr. B. will visit many of the prominent establishments of the old country and America, and we all await his return with impatience, knowing as we do that he will have much to tell us that will be both entertaining and instructive.

A. Mauff has joined the ranks of the Benedicts and has taken to himself a better half. The good wishes of the entire community go with the young couple.

Harrison H. Given has closed his city store and will give his entire attention to the wholesale cut flower trade and his large catalogue business.

A visit to the many greenhouse estab-

lishments in and around the city shows a decided improvement in the quality of the stock grown over preceding years.

A grand inaugural ball will be tendered Governor-elect McIntyre January 8 at the Brown Palace Hotel, also a formal reception at the Broadway Theatre on the same date. The floral decorations will be lavish; Mrs. C. R. Gallup will decorate the theatre and the Park Floral Co. will do the hotel.

The Denver Club gave their annual holiday reception and ball at their fine clubhouse December 27; the decorations by Mr. A. M. Lewis (Colfax Floral Co.) were elaborate and artistic.

The city park commission are adding two houses, each 18x100, to the present range. This addition will give the city four fine houses large enough to grow a large stock of bedding plants for our park system.

Connor & Flohr of Canon City, Colo., have opened a branch store at Pueblo.

Mr. G. H. Smith has purchased the good will and business of the Colorado Florist Co., 520 16th street. H. H. GIVEN.

Washington.

Christmas weather in Washington was all that could possibly be desired. All the week before and until after Christmas day it was mild and bright, bringing out the flowers and shoppers as well. The thermometer registered about 8 degrees of frost Christmas morning, which made it comparatively easy for delivering plants and flowers. Trade was unusually good, most of the florists disposed of all their stock before the day was half over, and at good prices too. Several of the store florists say it was the best Christmas they have had since they have been in business. Flowers were plentiful early in the day, and the quality very good. Very few had provided for an unusual demand; judging from the dullness of business in general they naturally thought the florist's business would feel the same fate. All were well pleased with the holiday trade and say business has been very good ever since.

Roses were plentiful and of very good quality; almost every one selling out before the day was over. Prices were as follows: Beauties 75 cents to \$2 each; Cusins \$2; La France \$3 to \$5 per dozen; Brides \$3 to \$5; Meteors \$3 to \$4; Perles \$2; Golden Gate \$5 to \$8; Gontiers \$1.50 to \$2; Kaisersin \$4 to \$6; Brunners \$15 to \$18; Mermets \$5; Bridesmaid \$5.

Carnations were plentiful, of good quality and in great demand. There was very little sleepy stock to be seen, though the growers had left them on the plants as long as possible expecting to get holiday prices, which they did. They retailed from 50 cents to \$1 per dozen. Violets were plentiful and of good quality and in great demand; they sold well at from \$2 to \$3 per hundred, the ruling price being \$2. Valley was scarce and but little in demand, bringing from \$1 to \$1.50 per dozen. The best valley coming to our market now is from Boston. Romans were plentiful and of excellent quality retailing from 50 cents to \$1. Narcissus were plentiful and good bringing 75 cents. There was but little demand for bulbous stock, it being mostly disposed of in boxes of mixed flowers only.

There was quite a demand for blooming plants such as azaleas, cyclamens and poinsettias. The supply was nowhere equal the demand. The demand for poinsettias was something unusual. There was only a limited supply of azaleas in flower, and they were soon disposed of; a

few specimen plants brought \$10, the average plant bringing from \$3 to \$5.

REYNOLDS.

St. Louis.

The shipping for New Year's day was above the average, in fact the shipping all through the season has been in advance of any previous year. Christmas was followed by a cold wave which remained during the holidays, the lowest point touched being zero; this following the hard cutting for Christmas has kept stock scarce, and the market has been firm in consequence. Southern grown violets have been scarce owing to the freeze, and Am. Beauties appear to be in shorter supply than usual.

The cold wave tested the heating capacity of all the establishments. The heater in one of the stores of the Ayers Floral Co. went wrong and all stock had to be moved to the remaining store. F. J. Fillmore was caused considerable inconvenience by one of the sections of his Florida "twin boilers" cracking; the remaining one, however, managed to keep the frost out with the assistance of a few fires in the most exposed houses; the small amount of damage was caused principally by smoke.

Thos. E. Carroll, who changed his entire place to steam with the single pipe system during the past summer was seen after the cold wave and was highly pleased with the working of the system and the ease with which the place was kept under control. With a good grade of soft coal the boiler can be left for two hours at a time, this being about the limit.

His carnations as a whole are looking well, there being a few varieties, however, which do not come up to the general standard. Uncle John is badly affected with the rust, and some of the other varieties are showing it. Copper solution is being applied and will doubtless check its spread. Lizzie McGowan behaved badly after having received the first syringing with the solution, it having appeared to kill the edges of all the exposed petals in the bud stage, causing them to become gummy and bend, thus preventing the proper opening of the flower, they appeared about as bull headed roses do at their worst. A fine batch of Buttercup was noted; they were grown during the summer in pots and planted directly in the benches from them; the best returns are made from this variety when three or four flowers are left on one stalk.

R. F. T.

Toronto.

New Year's business though nothing extraordinary was fairly good and there appeared to be enough flowers to go round. Now there is of course a lull, but I hear no serious complaints yet and it is probable that trade for the time of year is about normal.

There has been a great demand for palms all through the holiday season. Kentias have by far the greater call.

Many of the florists have been out to Messrs. Miller & Son's place to see the new white carnation "Bride of Earls-court"; all the reports given so far are that it is a good thing, stiff stem, good calyx, lasting, prolific and a large flower. It was raised by Mr. Geo. Hollis of Davenport three or four years ago, who sold his whole stock to Messrs. Miller & Son. It was shown at the late chrysanthemum show but not under favorable conditions.

Rumors of a combine between the pri-

ncipal rose growers are still flying about. There is no doubt that matters might be improved but I can't quite see how a combine is going to do it. Would not efforts be better directed if aimed at increasing the demand for flowers instead of trying to elevate prices or limit the supply?

Mr. John Cotterill met with a sad loss last week. His mother, on her way home from town just after getting off the street car, had a stroke of apoplexy and died immediately. Mr. Cotterill has the sincere sympathies of all the trade in these parts.

Six degrees below zero in Cincinnati, Ohio, I see, and 4° below in Toronto, Canada. Something must be loose somewhere. The thermometer stands at 40° to-day (7th); hard times for the coal man but "tant mieux pour les autres." E.

Buffalo.

Contrary to reports from some other cities New Year's business was better than last year. New Year's day was fine and everybody was busy. It has been for many years a very quiet time compared to Christmas, but the one just passed was an improvement. Since that happy time everything has been very quiet, and the chief occupation has been bill making and collecting, or an attempt at it.

There has been no large entertainments of late excepting the annual ball of the aristocratic Buffalo Club at their beautiful home on Delaware avenue. The aristocratic Delaware avenue florist, Mr. C. F. Christenson has a cinch on that every year; evidently Mr. C. must do it up in full style, for no one else is consulted.

There are sufficient flowers coming in just now, and prices have got down to normal winter rates. Mr. Long is receiving some very fine roses at present, particularly Bridesmaids. Violets plentiful and of fine quality.

The monthly meeting of the Florists' Club was held at the conservatory of J. H. Rebstock on Tuesday last. The attendance was not what it ought to have been. There was not much besides routine business transacted, after which we were invited to partake of Joe's hospitality. Oh, my! fizz, pop, and everything else you could think of. Those who were there will long remember it; those who were not there are weeping and gnashing their teeth.

For the benefit of those few who know the locality in this city known as Cold Springs I wish to inform them that an enterprising public caterer has built a superb bowling alley; it is nearby a range of greenhouses that some of you know, and close to a little room where rest in peace the trophies won at Atlantic City. If any wandering florist thinks he can roll a skillful ball let him call!

W. S.

Baltimore.

The weather clerk seems to have concluded to give us every possible variety of weather in as short a time as may be. Last week's excessive cold dissolved in a gentle warm rain, and for two days spring was here, as far as sunshine and temperature were concerned, but alas! the brief respite was followed by a mixture of rain, snow, sleet and cold winds that made life a burden to the unhappy mortal that had to be out in it. Needless to say the business of the florist does not boom under such circumstances. Particularly when we consider that there is a sort of economical taint in everybody this year, and

even the swell young man inquires the price very carefully before having his American Beauties or violets put up.

Carnations are about the only thing not in heavy supply. Violets are plentiful and fine. Roses of all kinds are good and plentiful.

MACK.

Boston.

The problem before the Gardeners' and Florists' Club at the January meeting was the election of a president and vice-president, the candidates previously elected having declined to serve. The matter was finally settled by the election of Wm. J. Stewart for president and Lawrence Cotter vice-president. The persistent refusals of both those gentlemen being effectually voted down and amid much good nature and profuse thanks to all the retiring officers and committees the new incumbents were inducted into office.

An invitation from the New York Florists' Club to attend the annual supper of that organization was read and accepted with thanks.

The essay by Mr. Barker, which appears in this issue, was listened to with great interest and the essayist made a most favorable impression, especially in the discussion which followed, wherein he was plied with cross questions innumerable by Jackson Dawson, Keeneth Finlayson and others. Mr. Dawson acknowledged that Cornell University was engaged in a most useful work and expressed the hope that they would publish not only their successes but also their failures, a record of the latter being fully as useful as of the former, to which Mr. Barker replied that all experiments are faithfully chronicled whether successful or otherwise and full accounts would appear in their bulletins from time to time and promised further that he would tell the club more of the practical side of the work at Cornell at some future time. He exhibited a large number of interesting photographs showing processes as conducted in the various lines of horticultural investigation.

The past few days have been among the worst ever experienced by the cut flower men at this season of the year. The story is the same at the market, among the wholesalers and among the retailers. Prices have taken a precipitate tumble, and are at present writing not much better than those prevailing in mid-summer. It is confidently hoped, however, that with the end of the present warm muggy weather something like a restoration of winter rates will be possible.

Springfield, Mass.

Dealers report their stock pretty well exhausted, which fact is not at all strange in view of the tremendous trade which was experienced on Christmas and New Year's. The demand for flowers on New Year's was greater than for several years past, the favorite flowers for table decorations being roses, scarlet tulips and smilax.

C. F. Fairbanks has concluded to discard the Mermet rose this year and in its stead will grow the Wootton, which is considered to be the best red rose in this section. During the holidays Mr. Fairbanks made a specialty of Harrisii, and the demand exceeded the supply. He contemplates increasing his glass next spring.

The annual meeting of the Amateur Horticultural Society was held last Friday and the following officers were elected for the ensuing year: President, Rev. A.

M. Spangler; first vice-president, C. L. Simons; second vice-president, C. E. Bullis; third vice-president, H. N. Packard; secretary, George H. Lapham; treasurer, L. D. Robinson; board of finances, George Gengenbach, C. L. Burr and Joseph Aumer. The election of the board of directors was postponed until the 18th inst. At that time the board will be enlarged from 14 to 44 members. The report of the treasurer showed over \$1,000 in the treasury. The present membership of the society is 940.

The firm of A. F. Leonard & Co., one of the oldest seed houses in the state, has been reorganized, and a stock company formed under the corporation name of the A. F. Leonard Company. The concern sprung from the old New York Floral Company, which was purchased by Mr. Leonard in 1889. The new corporation starts with a capital stock of \$15,000.

In town: H. B. Tucker of Collins & Tucker, Ware, Mass. F. W. J.

Cincinnati.

We are experiencing the dull times that usually follow the holidays. The retail cut flower trade remains good. The growers are complaining about the severe cold weather we are having; it makes the coal pile sick with very small returns. The river is rising very fast and the florists around Cummingsville are afraid of another flood.

Louis Kyrke & Co. of Walnut street made an assignment January 7; dull times and poor collections were the cause.

Mr. Jackson of South Covington, Ky., left home day after New Year's, and his family are anxious to hear from him.

P.

Galt, Ont.

All agree that the holiday business was very good, and better than usual. Supply not equal to demand.

Mr. A. Common intends to build another new house, about the size of the one erected last fall.

John Wells has just completed a fine new house. A. Oliver has added some 20 feet to his house.

Hugh McCulloch Esq. contemplates building a new conservatory and it will no doubt excel anything in Galt.

MAC.

SITUATIONS, WANTS, FOR SALE.

FOR DESCRIPTIVE WHOLESALE PRICE LIST

ADDRESS **H. E. CHITTY,**
PATERSON, N. J.

WANTED!

A good, free blooming, healthy, vigorous **Yellow Carnation**. Flowers must be perfect, of fair size and borne on long, stiff stems. There must be plenty of pips, and these easily rooted.

AND HERE IT IS—Any one of the following will fill the bill:

ELDORADO—Pure yellow ground edged with light pink. Picotee marking.

KITTY CLOVER—Light yellow striped red with a little white.

EULALIE—Yellow ground penciled with pink.

We also offer this year

PRINCESS BONNIE—A beautiful pink variegated flower of large size; and
DAISY BELI—A white, variegated similar to Chester Pride, but very much larger flower.

Send for general price list of both Carnations and Coleus.

WM. SCOTT, from sand = \$3.00 \$25.00
LIZZIE MCGOWAN, from sand 2.50 20.00

The above varieties are from special selected stock. Plants from soil will be ready February 15th.

CHARLES H. ALLEN,

Please send cash with order. **FLORAL PARK, N. Y.**

CARNATIONS. I OFFER TO THE WHOLESALE TRADE A SEEDLING WHITE
The choice from over 400 varieties after three years' trial. **KOHINOOR** { Mountain }
of Light.

It is the best white I have ever grown. Plants robust, stems long, stiff and erect, flowers full, deeply fringed and extremely attractive, measuring 2 1/4 to 3-inches across without any forcing or disbudding. Comes quickly into BLOOM and CONTINUES PROLIFIC THROUGHOUT THE SEASON.

Flowers 2 1/4 to 3 inches across, on stiff erect stems 2 1/2 to 3 feet long, of the habit of McGowan but much more prolific; a striking and attractive shade of pure purple, a novelty in color, very taking, and entirely distinct from the purple maroons and so called purples. Price on the above varieties, \$12.00 per 100; \$100. per 1000.

My stock of Standard and New varieties has never been better than at present, and includes:

Sweetbrier, Stuart, Wm. Scott, Daybreak, Buttercup, Blizzard,	Thos. Cartledge, Caesar, Brutus, Anna Webb, Ferd. Mangold, Mrs. Fisher.	All at moderate prices, with regular discounts. I grow nothing but Carnations, and EXCLUSIVELY for Cuttings and Plants. My stock is rooted cool and is unusually healthy and vigorous. Inspection and correspondence solicited. Price List on application.

Valley Pips in Cold Storage.

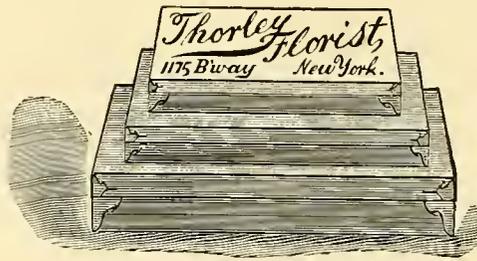

From "J. D." comes an enquiry as follows: "What is the best way to keep valley pips in cold storage? Will they keep best in bunches without earth or is it best to heel them into soil, and what temperature is best for them when in storage, the pips to be kept over till summer?" How large growers keep great quantities not only till summer but to the following fall I don't know. My experience is for a limited quantity. Unpack when received; don't untie the bunches. Put the bunches in boxes with a little earth or moss between each bunch, and the box must be deep enough so that you can nail slats on top, cover the tops of the pips with earth sufficient to just hide them. Why I say nail slats on top of box is because if you have to pay for cold storage you can then place any number of boxes one on top of the other, which would make a great difference in the charge; 500 pips in each box is a convenient lot to handle, and what a small grower would be likely to want for each batch. The temperature should be below 32° continually, but as little below as possible. If they could be kept at 30° regularly that would be ideal. You can keep the pips on your own place without the assistance of cold storage till the middle of March, but they must not have made the least move before putting them in cold storage if the best results are wanted. I have no doubt very large growers keep them over summer in the original cases in which they are imported. I received from a New York importer in November last some valley which had been in cold storage all summer in the original cases, never unpacked. They had not started in the least and were put in the sand on December 1 and proved most satisfactory. A case (2,500) is rather a large quantity for the retailer to grow for his own trade, therefore adopt the plan first suggested and which I have found works well. W. SCOTT.

LENOX, MASS.—E. J. Norman is joyful over the birth of his first boy.

GREENWOOD, MASS.—The business of Lowe & Baxter will hereafter be carried on by J. K. Lowe Jr.

NEW BRITAIN, CONN.—It is announced in the New Britain *Herald* that Edward Eggert, the florist, has made an assignment for the benefit of his creditors.

MONTREAL.—Mr. Jos. Bennett has built on his new place at Lachine two houses 150x18, one 150x16, and one 150x11. He has put in a 75-horse power boiler with a view to future additions. Low pressure steam is used. Roses, carnations and violets are grown.

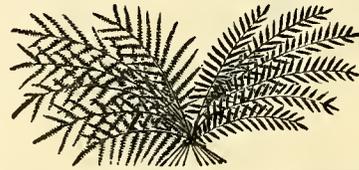

The boxes as they appear when set up for use.

We make them in a sufficient number of sizes, including for violets, to meet all necessary requirements.

MILWAUKEE, WIS.—At the annual meet-
ing of the Milwaukee Florists' Club, held last
Tuesday, officers for the ensuing year
were elected as follows: J. M. Dunlop,
president; W. Freitag, vice-president; A.
Klokner, secretary, and H. Haessler,
treasurer. The trustees chosen were N.
Zweifel, W. Ellis and W. S. Scott.

BRIDGEPORT, CONN.—Christmas trade
was about 25% larger than last year.
Retail prices same. Supply short. Marked
increase in the call for violets. Demand
was exclusively for boxes of loose flow-
ers. No bouquets or baskets. Owing to
fine weather there was quite a demand
for holly and immortelles for decorating
graves in the cemeteries.

"The National"

Folding Flower Boxes are the best
and most convenient ever put upon
the market. They are made from
board, manufactured especially for
these goods, and made so as to resist
moisture, thereby keeping the flow-
ers fresh, and the box holding its
shape.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

Am. Seed Trade Association.

The Executive Committee of the American Seed Trade Association held their annual meeting at the Cosmopolitan Hotel, New York City, on Friday, January 4—Pres. Bushnell in the chair. The special occasion was as usual the discussion and arrangement of the programme for the next annual convention. The committee also named Detroit as the location for the coming annual meeting, the time being already fixed under the by-laws of the Association as Tuesday, June 11, 1895.

Pres. D. I. Bushnell of St. Louis presided, and the following members of the Committee and of the Association were present:

- E. B. Clark, Milford, Conn.
- Wm. Meggat, Wethersfield, Conn.
- Jerome B. Rice, Cambridge, N. Y.
- C. P. Braslan, Chicago.
- J. C. McCullough, Cincinnati, O.
- W. H. Grennell, Pierpont Manor, N. Y.
- J. A. Johns, Sioux City, Ia.
- E. V. Hallock, New York.
- C. L. Allen.
- F. D. Wolfrom.

Much regret was felt at the enforced absence of W. Atlee Burpee of Philadelphia, and earnest wishes expressed for his speedy restoration to health.

Sec'y A. L. Don gave his usual painstaking attention to the literary work of the meeting.

THE Iowa Seed Co., of DesMoires, are now in their new store, which is a three-story stone front building 44x133 feet. On December 19 they had an "opening" at which there were over 12,000 visitors. Each caller was presented with a package of sweet peas and a branch of holly. Their warehouse, about five blocks distant, is 66x132, four stories and basement.

ASTER seed is one of the scarce items this season, prices having advanced about 75%.

MR. S. F. LEONARD is making a trip through Texas and the southwest.

Expensive Christmas Bouquet.

"Please send me a nice bouquet of roses for Christmas. Find 2 cent stamp for postage," was an order received by a florist of St. Joseph, Mo. The letter contained a dime pasted to the order. Another order was for one-half dozen M. Niel roses by mail and enclosed 18 cents to cover cost of roses and the postage.

Our correspondent remarks: "Some of our western people are very fond of flowers and will have them at any cost!"

For a National Military Park.

The house committee on military affairs has ordered favorably reported the bill of Gen. Sickles of New York, appropriating \$100,000 for the establishment of a national military park at Gettysburg, Pa.

Blacktown Philosophy.

Some people are not satisfied wif success for themselves. Dey's constantly on happy unless dey kin kill off dey're neighbors besides.

CUT FLOWERS.

We have recently added to our list the product of a majority of the leading establishments of Niles Center, a district long famous for the excellence of its product. We are now better able than ever before to fill orders of a fine grade of stock in an almost unlimited supply. **Supply and Demand** makes the **Price**, and as stock is now quite abundant we can quote very low figures on

Roses Testouts, Bridesmaids, Meteors, Brides, Perles, Mermets, etc., extra fine.

Carnations Daybreak, Scott, Tidal Wave, Lizzie McGowan, Portia, etc., grown by carnation specialists.

Violets Marie Louise and Lady Campbell, the product of our famous Violet Kings.

Bulbous Stock Romans, Freesias, Valley, Narcissus, all fine.

Orchids We are the only house that handles a fine stock of Cattleyas, Cypripediums and all other leading commercial varieties.

Lilium Harrisii Extra fine.

Asparagus plumosus This popular vine is always carried in stock by us.

Notice. About February 1 we shall have in a magnificent crop of Jacqs. and Hybrids.

OUR MOTTO: Honorable and straightforward dealings with our patrons, both retail florists and growers.

When writing to any of the advertisers on this page please mention the American Florist.

Rahway, N. J.

Rahway soil takes kindly to the carnation and the carnation takes kindly to Rahway soil. For proof of this take a look at the establishments of Mr. Saling and James Dunn. Mr. Saling will meet you at the door with a genial smile but a mild protest withal, for he is not satisfied with this year's results, which he says do not begin to compare with those of last year. In this his experience tallies with that of growers the world over, for every grower, however skillful and however watchful, is sure to get caught sometime. But, for all that, Bouton d'Or, Daybreak, McGowan and other favorites are looking well and Tidal Wave grows so tall and luxuriant that one would scarcely recognize it. The new Lena Saling is under trial here and is unsurpassed for color, vigor and general habit.

At the other establishment above mentioned will be seen a surprising instance of what a young man can do when he tries. The houses are in charge of Mr. Dunn's son Charlie, a young man of 21 who has personally planned, built, piped and furnished the entire establishment and now has a place which for neatness and general condition cannot be excelled anywhere. Here all the leading carnations may be seen at their best. Even the much condemned Uncle John—well, see how Mr. Dunn grows it and you will understand what its introducers meant when they proclaimed its virtues.

W. B. DuRie is another Rahway florist; that is, when he is not engaged in teaching the young idea how to shoot in Jersey City, where he is principal of one of the schools. Mr. DuRie's special problem at the present time is the violet question. If he can solve it, undying fame is his.

Holyoke, Mass.

Christmas greens were more extensively handled by Holyoke florists this year than ever before. The demand started in a week before Christmas and continued until the close of the holidays. All report a particularly heavy call for roses.

E. H. Howland has begun the construction of a large addition to his already spacious greenhouses. Next season Mr. Howland will make a specialty of roses and the improvements now in course of construction will give him increased facilities for carrying on this special feature.

Florist Shaw assisted in decorating E. C. Taft's handsome residence at a recent reception held there, to which over 500 invitations were issued. The beauty of the floral arrangements were the occasion of many favorable comments during the evening.

The Holyoke Horticultural Society at its last meeting listened to an interesting and ably written paper on "Wild and cultivated flowers," by Mrs. C. W. Ranlet. F. W. J.

THE AMERICAN FLORIST (\$1.00) and Gardening (\$2.00) together to one address for one year for \$2.50. Send orders to American Florist Co.

E. G. HILL & CO., Wholesale Florists
RICHMOND, INDIANA.

Kansas City, Mo.

Trade at Christmas was never so good as it was this year. Prices way ahead of previous years. Am. Beauties \$14 a dozen, Brides and Bridesmaids \$3.50, Perles, Woottons \$3, Romans \$1, valley \$1.50, narcissus same, carnations \$1 and \$1.25; supply about equal to demand, and of very good quality. All the orchid blooms in sight sold readily at \$1.50 to \$2 each (Cattleyas) as did azaleas at \$1.50 each. There was also a good demand for cyclamens, primroses, palms and ferns.

Decorating and floral work has simply been immense during the month of December. All have done well, and many report it the best month in their history.

The next meeting of our club will be at R. S. Brown & Son's January 11, at which time we will be able to get from the boys a better report of business. Quite a few have expressed a desire to become honorary members of our club, and are good patrons of floriculture. We have made no mistake in forming a Florist Club.

S. M.

Dutchess County (N. Y.) Horticultural Society.

The widely scattered gardeners and florists of Dutchess county, N. Y., have long felt the need of an organized society, with a center where they could meet and become better acquainted with each other, discuss horticultural matters, promote exhibitions and otherwise advance the interests of horticulture.

The first step towards attaining this object was taken at Poughkeepsie on January 2 when a number of gardeners and florists met and resolved to organize a society which shall be called the Dutchess County Horticultural Society.

The following officers were elected: President, Mr. James Blair, gardener to Ogden Mills Esq., Staatsburg, N. Y.; vice-president, Mr. M. J. Lynch, florist, Poughkeepsie, N. Y.; treasurer, Mr. James Sloan, florist, Poughkeepsie, N. Y.; secretary, Mr. Wallace Gomersall, gardener to Winthrop Sargent Esq., Fishkill-on-Hudson, N. Y.

The next meeting of the society will be held at the Poughkeepsie Court House February 6, 1895, at 1:30 p. m., when all gardeners and florists who wish to become members of the society are cordially invited to be present.

W. GOMERSALL, Secretary.

To Make Room.

We have at least 80,000 Geraniums, all the leading varieties, grown in flats, ready for 3-inch pots, at \$1.75 per 100, \$15.00 per 1000. In all cases cash must accompany the order. Selection of sorts to remain with us.

J. E. FELTHOUSEN,
370 Van Vranken Ave., SCHENECTADY, N. Y.

CHOICE SEEDS.

PETUNIA GRAND. FIM. FL. PL.

The largest and finest strain of double fringed and mottled Petunias to be had. All who see these Petunias say they are finest they ever saw. Extra.

VERBENA GRANDIFLORA.

This improved strain of Mammoth Verbena gives perfect satisfaction to my many customers, and is justly claimed the finest in cultivation; florets an inch in diameter, in extra large trusses, of finest colors.

CYCLAMEN GIGANTEUM.

A magnificent collection of the finest plant flowering varieties; largest flowers and best colors.

Each, per trade pkt. 25c; 3 pkts. 60c; 6 pkts. \$1.00. I will here thank my florist friends for the many letters of commendation received during the past year.

JOHN F. RUPP, Shiremanstown, Pa.

NEW VIOLET "THE CALIFORNIA"

Pitcher & Manda, Eastern Agents.

Flowers cover a silver dollar; stems 12 inches long; color pure violet purple. "THE CALIFORNIA" has been in course of propagation for three years and is now offered to the trade as a TRIED STERLING NOVELTY. The prices have been placed so low that the plants can be bought in large quantities to supply the cut flower trade. "THE CALIFORNIA" will undoubtedly be the leading Violet next season. Last year a few thousand flowers were offered in San Francisco, and they sold for ten times the price of Marie Louise and Russian. This season tens of thousands of "THE CALIFORNIA" Violet have been placed on the market, and are being sold at four times the price of the above varieties.

DESCRIPTION.

Plant vigorous and absolutely free from disease; flowers single, immense in size; color violet purple (does not fade); fragrance intense; flowers borne on strong stems 10 to 14 inches in length. Last season several hundred flowers were picked from a single plant. Delivery of plants will begin in February or March, 1895.

PRICE.

AS THE EASTERN AGENTS FOR THIS NEW VIOLET we are enabled to offer the plants at the same price as charged by the introducer in California, thus saving our patrons much expense and risk. We quote for quantities less than 100, 15c each; 100 to 500, 10c each; 500 to 1000, 7c each.

We have investigated at a considerable expense all that has been said regarding its merits, and have found the above to be true in every particular. One local authority states that "The New violet is magnificent. Some stems are 16 inches long, the flowers very large."

PITCHER & MANDA,

WHAT IS THOUGHT IN EUROPE

OF THE
New Chrysanthemum "PHILADELPHIA."

THE CHRYSANTHEMUM EXHIBITION.

To the Editor of the STANDARD:

SIR—At the last moment I have received from Philadelphia six blooms of a magnificent new Seedling, incurved Japanese Chrysanthemum, named "Philadelphia," pronounced by the ablest experts to be the finest variety yet seen from America. They will be on view in the north gallery of the Aquarium until the close of the Chrysanthemum Exhibition. I am, sir, your obedient servant,

Ranelagh Road, Ealing, London, W. Nov. 7th.

R. BALLANTINE, Chairman National Chrysanthemum Society.

From the GARDENING WORLD, Nov. 17th, 1894.
CHRYSANTHEMUM "PHILADELPHIA."

On Wednesday evening of last week, unfortunately some hours after the Floral Committee of the N. C. S. had concluded its labors, a box of chrysanthemum blooms arrived at the Royal Aquarium, which created a lively amount of interest among the growers present. The box, which had been sent by Mr. Hugh Graham, 1204 Chestnut St., Philadelphia, U. S. A., containing six blooms of seedling incurved Japanese chrysanthemum, "Philadelphia," and which, notwithstanding their long ten days' journey, arrived in a remarkably fresh condition. Beyond a few bruises on the petals, the result of rubbing, they were as fresh as if cut but the day before, and Mr. Graham was awarded a silver gilt medal of the Society for his Exhibit. It is a grand-looking flower, six inches across, and in general terms may be described as a White Robert Owen; but unfortunately it is not a pure white, the tips of the petals being shaded with pale lemon or cream color. It is said to be a cross between Margaret Graham (Ruth) and Mrs. Craige-Lippincott.

From the JOURNAL OF HORTICULTURE, Nov. 15th, 1894.
A NEW AMERICAN CHRYSANTHEMUM, "PHILADELPHIA."

It is an unusual thing to see blooms at an exhibition of chrysanthemums grown 3,000 miles away, yet we think that Messrs. Cannell & Sons once staged some American blooms of Louis Boehmer at an Aquarium show just prior to its distribution in England. At any rate to Mr. Hugh Graham, of Philadelphia, belongs the credit of repeating the experiment with a marvellously fine Japanese incurved raised by him. The flower, which he has named "Philadelphia," is a solid, massive looking, globular flower, as round as a ball, very large in size, and has deep, incurved grooved florets of good breadth, which are ribbed or veined on the outer face. The tips of the florets are rather sharply pointed, and the color is a clear white, slightly tinted primrose at the tips. "Philadelphia" has already received a first-class certificate from the American National Chrysanthemum Society, and the flower arriving too late for the Floral Committee of the English N. C. S. to see, it was awarded a silver gilt medal by the Arbitration Committee. We congratulate Mr. Hugh Graham on being the first American grower to obtain this distinction.

From the HORTICULTURAL ADVERTISER, Nov. 14, 1894.

What would have been the attraction of the day unfortunately arrived after the meeting was over. This was a consignment of blooms from the United States,

through Messrs. B. S. Williams & Son, of Holloway. The flowers were of one kind, a magnificent white incurved Japanese named "Philadelphia." The flowers had borne the journey wonderfully well and were fine examples. Florets wonderfully stout and broad, forming solid blooms six inches in diameter, and as much in depth, in fact almost perfectly spherical. The florets were said to be tipped with yellow, but this was not apparent in the gas light by which we saw them.

From GARDEN WORK, Nov. 21st, 1894.

A FAMOUS CHRYSANTHEMUM.

At the exhibition of the National Chrysanthemum Society, held at the Royal Aquarium, Westminster, on the 6th, 7th and 8th inst., Mr. Hugh Graham, of Philadelphia, U. S. A., exhibited a marvellously fine Japanese incurved raised by him. The flower, which he has named "Philadelphia," is a solid, massive looking globular flower, as round as a ball, very large in size, and has deep, incurved grooved florets of good breadth, which are ribbed or veined on the outer face. The tips of the florets are rather sharply pointed, and the color is a clear white, slightly tinted primrose at the tips. "Philadelphia" has already received a first-class Certificate from the American National Chrysanthemum Society, and a Silver Gilt Medal was awarded Mr. Graham for the flower by the Arbitration Committee of the N. C. S.

From the GARDEN, Nov. 17th, 1894.

A FINE AMERICAN CHRYSANTHEMUM.

On the second day of the N. C. S. exhibition, blooms of a variety called "Philadelphia" were received from an American grower, Mr. Hugh Graham. This variety, presenting our climate does not make any difference, is destined to occupy a prominent place in our collections. After its voyage across the Atlantic "Philadelphia" certainly seemed none the worse, and it may be described as a very large globular flower with grooved, pointed florets of great width. The reverse is ribbed and the color white, with a faint primrose marking at the tips. It has already been awarded a first-class Certificate by the American Chrysanthemum Society, and the English N. C. S. thought so highly of it that they awarded the raiser their Silver Gilt Medal. Mr. Hugh Graham may be congratulated on his enterprise in dispatching blooms for exhibition such a distance; and he is certainly the first American who has been awarded such a distinction.

[COPY OF A CIRCULAR DISTRIBUTED IN ENGLAND.]

Magnificent New American Chrysanthemum
"PHILADELPHIA."

This Peerless Treasure is Absolutely Without a Rival.

MR. HUGH GRAHAM, of Philadelphia, one of the most distinguished and enthusiastic florists in the United States, the raiser of this superb incurved Japanese, despatched by special messenger six blooms, which unfortunately only reached us on the evening of the second day of the great exhibition, at the Royal Aquarium, November 7th, 1894; we had them immediately staged and brought under the notice of the Chairman and Committee of the National Chrysanthemum Society, and they unanimously awarded a Silver Gilt Medal. These blooms having been cut and packed for ten days, prove it to be one of the most lasting flowers yet raised, invaluable both to exhibitors and growers for market on account of the enormous size of its flowers.

The flowers were of the finest globular form, six inches in diameter, and of the most delicate creamy white, the tips tinged with sulphur yellow. The petals are purely incurved, with slight inflections to the right and left as in the Japanese.

It has created the greatest sensation and received the highest awards wherever shown.

We are pleased to state the entire distribution in Europe of this sterling novelty has been placed in our hands.

Plants will be sent out simultaneously by Mr. Graham for America and by us in London, the probable date of distribution being March 1st, 1895.

Price of plants, 7s. 6d. each; six for 42s.

YOUR ORDERS SHOULD BE GIVEN EARLY TO ENSURE THE PLANTS BEING SENT OUT AT THAT DATE.

B. S. WILLIAMS & SON,

Victoria and Paradise Nurseries,

UPPER HOLLOWAY, LONDON, N.

Indianapolis.

Christmas trade was better than expected. There has been, however, some complaints regarding the "staying qualities" of stock shipped in. The question is asked: "When flowers are received in such condition that they must go at once to the dump-pile should the dealer be obliged to pay for them?"

Holly and green were largely used but not quite so freely as last year.

The regular monthly meeting of the Indianapolis Florists' Club was held at the club rooms, January 2. Very little business was transacted. After reading the minutes, the newly elected officers were installed. A resolution of sympathy was tendered to Henry Rieinan, our popular president, who recently lost a child; he himself has been sick but is now all right again. After business was transacted, the social part of the meeting began. Several ladies and young folks were present and a splendid lunch was spread by them. Several piano solos by our Prof. Walker, songs by invited guests and a very creditable sleight of hand performance, with dancing afterwards, kept the company together until a late hour. Owing to its being the evening after New Year's and a very busy week, many members did not attend, being completely tired out.

The 9th annual election and meeting of the Society of Indiana Florists will be held in this city Tuesday, February 5.

Mr. John Gird of Fremont, Nebraska, was in the city several days ago on a sad mission, bringing his wife's remains to be buried at beautiful Crown Hill Cemetery.

A great deal of funeral work lately has kept white flowers down to a low notch. Violets are very scarce in this neighborhood, the dry summer having killed some and the violet disease many more.

During a recent visit to Mr. Dornier's place at La Fayette, Ind., we found many things of interest. The place has changed much in the last two years, an entire new block of greenhouses, airy, well arranged and of the newest pattern, has been erected, two beautiful new dwelling houses, an office and packing building and a naturally cold cellar for keeping cut blooms. But the most noticeable feature is the arrangement of the grounds, laid out in proper shape, inviting to everyone entering. This is something that every florist should take notice of if he has any space at all; to lay out and keep it in good condition, adds beauty to the establishment and finds imitation. W. B.

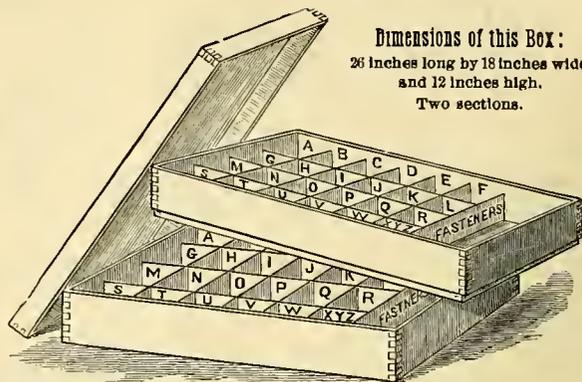

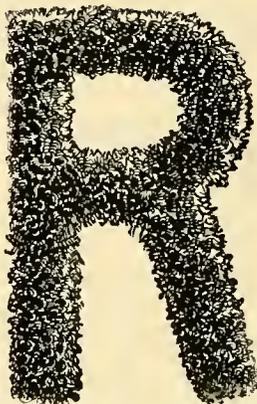

The "Night Watchman."

I had an opportunity during the Christmas holidays to test the "Night Watchman" invented by Mr. A. C. Rott and which was noticed in your issue of November 3. It is a valuable discovery, not only of use in the greenhouse, to tell when it is too cold or too hot, but it is available in a bed room or sitting room to let your janitor know what the temperature is, in any room of the house and "to govern himself accordingly."

St. Paul, Minn.

The Christmas trade was exceptionally good. The weather was propitious and remained so. No disappointing storms or cold waves came the last minute to remind us of the bouquet that we didn't send the weather clerk. Buyers came early and late. Every store was filled and while a good deal of "shopping" was done, prices were not badly cut. In a few instances some cuts were made, but as the growers held their prices firm the retail stores were compelled to do likewise.

Roses as usual had the call and retailed at \$2 to \$3 per dozen. The finest brought \$4, while Beauties of inferior quality sold at \$12. Carnations were listed at 75 cents to \$1, Romans, valley and narcissus \$1, violets \$1 per bunch, "mums" \$1.50 to \$2. The supply was about equal to the demand, the most noticeable shortage being in Beauties and carnations.

John Nelson brought in violets as large as a half dollar.

Christmas greens were eagerly sought after and everything in the line of holly, wreathing, etc. was disposed of.

A very noticeable feature of the trade was the sale of plants. Everything in bloom was eagerly snapped up.

From reports received from our sister city—Minneapolis—trade there was exceptionally good both Christmas and New Years. The "Glass Block" man did not handle flowers during the holidays.

New Year's trade in this city was first-class. There was a good demand for all cut flowers, while several large decorations helped to swell the sales for the old year, and place it on record as a fairly good year for florists.

Growers, be hopeful—the holiday season just passed has once more proven that first-class stock will always command superior prices. Retailers, take heart. The trade of the past fortnight is but another evidence of the growing popularity of your goods and augurs well for the future.

FELIX.

FLOWER POTS

The Whilldin Pottery Company,

713, 715, 717 & 719 Wharton St., Philadelphia, Pa.

BRANCH WAREHOUSES:

Randolph Ave. and Union St., Jersey City, N. J.

Jackson Ave. and Pearson St., Long Island City, N. Y.

STANDARD FLOWER POTS

Every user of Flower Pots should correspond with us before purchasing elsewhere. Our facilities are unequalled.

A. H. HEWS & CO., N. Cambridge, Mass.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Dopfle & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopfle and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

SYRACUSE POTTERY CO. 403 North Salina Street, SYRACUSE, N. Y.

OFFICE:

WAYSIDE IRELAND is the title of a delightful little booklet (it would be unfair to call it a pamphlet) by Mr. W. Baylor Hartland of daffodil fame. He describes a trip from Cork through Connemara and Achill Island, describing scenery, agriculture and peasantry. Mr. Hartland writes shrewdly of agricultural Ireland, and no one can fail to admire his buoyant, light-hearted style of writing; it is a most interesting little book.

MR. H. L. SUNDERBRUCH of Cincinnati prints the S. A. F. telegraph code on the back of his cut flower price list. This is an excellent idea as it brings the code under the eye of the buyer at the right time.

The Work of the C. S. of A.

ED. AM. FLORIST:—Complaint comes that the judging under the auspices of the Chrysanthemum Society of America has been too severe, but, if we think of it, it is only what we should expect under the dogma of the trade. In spite of recommendations the majority of the judges was selected from the ranks of the trade, and in consequence nearly all the judging was done in their interests. Certainly, there appeared a desire everywhere to give preference to more refined flowers, but size and a stiff stem were the prime requisites. There must be a limit to size, and while we all glory in an immense bloom the general public includes a multitudinous variety of tastes. Already what is coming is foreshadowed by the fact that large blooms are grown at a loss, and those shrewd florists who put financial considerations first are growing medium sized flowers in less space, with better returns. Another indication of the future is that small specimen plants, in 6-inch pots, are easily handled, require less care, occupy very little more space, and bring more money than the largest specimen blooms. These considerations must weigh with those who grow flowers for profit.

For the last ten years the florists of the United States have been making a name for themselves among English growers. There have been introduced into European gardens many varieties of sterling merit. Up to now it has appeared that Americans must lead. Up to now we have profited by what has been their disadvantage. Raising seedlings in England from English hybridized seed has been looked upon almost as an impossibility, but now it seems the vigorous constitution of American raised seedlings has become the medium, making it possible to hybridize and save seed there. Special condition with regard to structure of houses suitable for this purpose, and caring for the plants during the ripening process, have been necessary, but it is a remarkable achievement, and is becoming a matter of some concern to the American florist. Mr. Shea, before the Royal Hort. Society, stated that he had collected a quarter of a pint of good seed in a structure thirty feet by twelve. Our misfortune is that it has been too easy. There the difficulties to be overcome have added

value to the results. With the care and methodical characteristics of the Briton the future of the American florist in this field is in danger. Now, here is the difference. We have been going along one line only, as above outlined. They have been bringing all the classes along together. I think most growers and raisers will agree the limit has been reached with us. Now, we should turn, and there is no doubt the public will be with us and bring up the other lines. In most of the exhibitions boards have been discarded and, I must confess, few were, at first, more pleased than myself. But they have gone altogether, and now it is questionable whether we were wise in discarding them. The result has been what few of us foresaw—the stiff stem criterion. This sweeping elimination of the boards has transformed our exhibitions.

I should be glad of a further expression of opinion.
T. D. HATFIELD.
Wellesley, Mass.

Little did we suppose when we wrote our last article on chrysanthemum culture last November, and advised all intending exhibitors to keep their blooms at home rather than show them before judges whom they deemed incompetent, that we should so soon see an article like the foregoing. There has always been some little grumbling by disappointed exhibitors, of course, but until quite recently very little has appeared in the press in this country.

Mr. Hatfield, in commencing his article, says that "the judgment has been too severe." Probably no better commendation of the work that the gentlemen composing the several committees of the Chrysanthemum Society of America have done, coming, as it does, from one who exhibited seedlings, could be given to the public and to those who are dependent, to a great degree, upon the work of the different judges of the country to know in what varieties it will be for their interest to invest their hard earned money. The society is not for any one section of the country or for any one class of the trade. The private gardeners of the east, backed as they often are by unlimited funds, can afford every year to buy one plant of a number of inferior varieties and throw them away, but the majority of the buyers of the country are in the commercial line, and when they invest in a new variety are not satisfied with the trial of one plant, but buy of an A1 variety ten, fifty or one hundred plants. And the most critical judgment is what they deserve, believing that it is far better to advise the further trial of ten varieties than to give the highest award to one of questionable merit.

Continuing, the article reads that "in spite of recommendations the majority of the judges were selected from the ranks of the trade." It chanced to be our lot, as

president of the society, by the rule passed last August, to be the appointee of those committees. We do not know from whom the recommendations came, but certainly not from the society itself or from any of its members. "The ranks of the trade" is a little abstruse, and may mean all who are in the profession earning a livelihood, or only those who are interested in commercial plants. We hardly suppose that the correspondent means the former class, for where should we look for judges except in those who make the growing of plants and flowers their life work? And no disseminator would want to trust to the outside world, the best of whom only know but twenty or less of the most grown or most largely advertised varieties, and there are very few amateurs capable of filling this difficult position. If your correspondent means that the judges were selected from the latter class, allow me to inform him that he is mistaken, and does not know the gentlemen on the several committees. In appointing the committees it was our endeavor not to have any one committee composed of any one class or branch of the trade, and to include in the whole all branches of the profession, viz., commercial growers, private gardeners, wholesale and retail florists, disseminators and amateurs. In looking over the list of the several gentlemen comprising these committees we find there were five commercial growers, five disseminators, three private gardeners, one retail florist, one wholesale florist and one amateur. If all the cities were like Boston and Philadelphia, where there are scores of gardeners on large places well able to purchase every novelty, it would have been an easy matter to make up the committee of a majority of this class, but after leaving these two cities you must depend chiefly upon the commercial florist for good judges.

Of the criticisms of the judges we can only say that we personally know them all to be men of the strictest integrity, each and every one knowing full well the good and poor qualities of a bloom for all purposes, and capable of performing the difficult task which they have been kind enough to do, giving time and knowledge gratuitously for the benefit of us all. And of their work allow us to say that we have received letters from all over the country commending the plan adopted and praising the work done.

In closing allow us, as the president of the Chrysanthemum Society of America, to publicly thank the several gentlemen comprising the committees for the work which they have so faithfully performed.

ELIJAH A. WOOD.

South Denver, Colo.

Chrysanthemum James Comley.

The accompanying engraving is from a photograph of a flower sent us last month by Messrs. E. G. Hill & Co., Richmond, Ind., and shows its character very well, but the camera did not clearly catch the peculiar marking of the petals. The color is a soft light magenta, with a hair line of white near the edge on either side of the petal. The distinct coloring and shape makes this distinct from any other chrysanthemum we know, and we believe this will be a very valuable exhibition variety.

Chrysanthemum Mrs. Moses J. Wentworth.

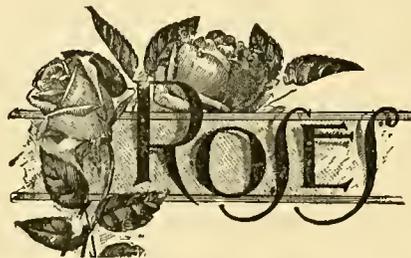

I have noted the remarks on this "mum" in a recent issue and am much surprised to have it termed "yellow Jap., style of Lin-

CHRYSANTHEMUM JAMES COMLEY.

coln." In the first place if I know "what's what" it is hybrid Chinese—and no more resembles Lincoln than Louise D. Black. Its rich color is much like Lincoln and that is the only point in common. I also may add that in my opinion (I think I speak advisedly) it is justly entitled to the certificate given it at the Chicago flower show last November. On the judge's books it read "special mention," meaning the same thing.

GROVE P. RAWSON.

Roses Dropping Their Buds.

"C. L." and several others write that their Bridesmaids drop their buds, but do not state at what stage they drop. The general class of Tea roses, including the whole Mermet family, will occasionally fail to set their buds, though this does not often occur, and there are several causes which make them do it; one of the most general is insufficient air and sunlight at just the critical time, and it is generally most noticeable when the plants are to all appearance growing extra well, but when carefully traced down it will usually be found that the house in which they are growing has been kept a little too close, in conjunction with a little too

much stimulant, either in the form of mulching or liquid, thereby causing the growth to be a little too soft. By watching carefully the effect in this line in different temperatures and under various treatments it will be found that where the plants make comparatively slow growth this trouble never, or very rarely occurs. But where it is the reverse of this it can be found in some varieties more readily than in others, and more in those making apparently the strongest growth.

When Cornelia Cook was grown extensively in this section it was very subject to it, particularly under such circumstances as above. The best remedy we found was to give as much air as possible consistent with the health of the plants, and not water quite so freely as before, particularly in cloudy weather. Pure ground bone as a fertilizer, used sparingly, will also help to prevent this trouble, as its nature is to produce firmer wood. Of course care must be taken at all times not to give the plants a sudden check, as that would be equally as bad as the other. It is somewhat variable in affecting different varieties; in Cornelia Cook the buds get black at a very small stage, generally when not larger than an ordinary pin's head, while in some others they get somewhat larger and decaying. But no matter in what stage it affects the plants it is very annoying, and I trust this will be of some value to "C. L." and others who are troubled in this way.

For roses in general, where they have been growing and blooming freely up to date, as the days are now beginning to lengthen out a little another thin mulching will be beneficial if the manure—which should certainly be well decomposed be-

MRS. PIERPONT MORGAN ROSE.

fore using—is not very strong. It would be better to spread over the surface of the bed or benches a very thin coat of pure ground bone, then cover this about half an inch thick with fine manure, and immediately the plants need it give the whole a good soaking of water, enough to thoroughly moisten all the soil; this carries the small particles of bone down close to the feeding roots where it does the most good. Of course all dead leaves, weeds, etc., should be cleaned off before applying the mulching, and as much air as can reasonably be given should be kept on the ventilators on all favorable days, and for all the general class of tea roses a mean temperature of 56° at night will give much better results than even two or three degrees higher will.

Keep down all greenfly by the use of tobacco either in the form of vapor by means of steam appliances, or by stems scattered over the walks, etc. The smoke from fumigating in the hands of most people is usually very injurious to the quality of the flowers, though it is possible to do it without injuring them under certain conditions; but those conditions must be thoroughly understood before attempting it, and as a rule it is only safe in the hands of those who have long practiced it, that is for houses where the roses are in full bloom, but it is perfectly safe otherwise. We have followed a system of vaporizing tobacco juice here for several years, and have been well satis-

fied with the results. The modus operandi we gave in the columns of the *FLORIST* two or three years ago. Plants are like persons—look much better and feel more comfortable if kept clean.

Summit, N. J. JOHN N. MAY.

Classification of Roses.

There are not many rosarians who adopt the same method of classifying the rose, thereby causing a confusion that is increasing every year. Some simple method should be adopted which would clear away a great deal of useless mystery and complication. The person who has raised a new rose puts it into one class, while it has qualities that would consign it to a different one. To simplify the matter all roses should be placed in the following three grand classes:

First:—Roses that have distinct and separate period of blooming and resting continually throughout the year, called by the French "Remontant."

Second:—Those that bloom continuously throughout the year, without any temporary cessation or rest, called "Everblooming," as the Bourbon, China, etc.

Third:—Those that bloom only once during the year, in the summer months, I would designate these as "Garden" or "Summer" roses, as the French, Provence, etc.

I would subdivide the Remontant class as follows: Double Remontant, Semi-

double Remontant, Single Remontant, moss Remontant, Polyantha Remontant or Daisy Rose.

The Everbloomers I would sub-classify as follows: Double Everblooming, Semi-double Everblooming, Single Everblooming, Tea-scented Everblooming, Climbing Everblooming.

The Garden or Summer roses to be sub-classified as Double, Semi-double, Single, Climbing, Polyantha or Daisy, Summer Moss.

In classing new varieties the originator would have to cultivate the plant for two or three years, also test it in various soils, etc., as roses often come out quite differently the second or third season.

This system of classification would not prevent those who admire the rose from studying its botanical peculiarities. Examining the rose in all its parts is a very pleasing and interesting study. To do so we must observe the color of the flower, form, fullness, size, fragrance, vigor, habit of growth, whether shoots are upright or spreading, joints between the leaf stalks long or short, number of thorns, thickness, color, strength, length, straight or hooked, leaf stalks and foliage; if leaflets whether five, seven, nine or eleven in number, small or large, round, long, indented (serrate) or regular, glaucous and smooth, curled or rough; bark, if green (dark or light), pale brown or red; hardiness of plant, floriferousness, etc.

GEO. M. STRATTON.

Golden Gate Park, San Francisco.

Mrs. Pierpont Morgan Rose.

Personally I have great faith in this new rose of John N. May's. In my opinion it speaks for itself, and will commend itself to growers and the retail trade. Its excellent habit, sturdy, stiff stem and good foliage goes along with a large double finely shaped bloom of a rich, beautiful even shade of cerise red. It is a tone of color that is exceedingly brilliant under artificial light, and a pleasing color under any circumstances—also keeps well—in fact is very lasting as a cut flower.

Be it a sport or what it may

It most certainly has come to stay.

Excuse "Silas Wegg" for "dropping into poetry," but all the same I like the rose. I do not think it should require any further test to decide its merits. If Mr. May has sufficient stock I feel quite sure the public is ready for it, supposing the holiday trade has left us any surplus to deal in first-class novelties.

GROVE P. RAWSON.

Violets.

Mr. Wm. Scott gives several ways of growing violets in the *FLORIST* of December 29. I agree with him that it is very difficult to *always* produce a "first-class quality" of violets, but I think if growers would be careful to follow the example set by this flower in its natural state they would be fairly successful. As near as I can ascertain violets in their natural state grow (and produce the finest flowers) on rather low ground, or at least on rather heavy soil, and produce their crop in early spring when the days get warm and the nights are still *very cool*.

From my present experience I would say that violets should have a day temperature of at least 60° for a few hours each day and be allowed to fall to 35° or 40° at night, and should *never* be allowed to get dry.

I am satisfied that extra quality of violets can not be grown in a carnation house except during the fore part of the season, say in December and January.

When the days get longer and the house runs up to 70° and 80° the blooms come small and plants stop budding. I think plants taken (either runners or divided crowns) in April or May and grown on in 2½-inch pots and planted in bench about August 1, will produce more blooms than the field grown plants. But if not carefully attended to while in the pots or if allow to become pot-bound they might better be planted in the field.

I wish to say this is not from an expert, so you may take it for what it is worth, but violet growers may as well know that "eternal vigilance is the price."

Darien, N. Y.

H. W. HARMON.

Carnation Notes.

There are but few growers who are not well posted about the propagation of carnations, but to those who have had but little experience a few remarks at present may not come amiss. It is the general impression that in the propagation of nearly all classes of plants bottom heat is indispensable and that the carnation must have considerable, and that the sides of the benches must be boarded to the ground. This is unnecessary, for some of the most successful propagating I have ever seen was on a bench that had no heat under it and where the sun never shone. I believe the best house for cuttings is what is termed a north-side house; that is one which is back of a three-quarter span house. Have enough pipes to keep the temperature 55° at night; the mercury should not go above 70° in the day time and 65° is better. Cuttings like plenty of air and light, but the sun should never shine on the bench. If you are obliged to use your main houses for propagating shade the cuttings but not to such an extent as to keep out the air.

Our cuttings are made by simply pulling the side shoots from the flowering stems, and with the exception of Daybreak they receive no trimming whatever; Daybreak foliage is naturally soft and is more apt to decay on the bench, and then as it is somewhat sprawling in its habit by trimming we can place the cuttings closer. Never allow the sand, which should be clean and four inches deep, to become dry, as you thus weaken the cutting; it is a good plan to wet the bench just often enough to keep it moist, and this should be done on a bright day. Some will ask: "How can you wet the cuttings in a north house and have the foliage dry off?" Simple enough; keep the heat on and open the ventilators.

Many believe that cuttings rooted in May will produce better results than those rooted earlier; this may be true of some sorts, but Lizzie McGowan should be rooted as early as February 15 to insure a good sized plant in time for fall planting and a large plant of this sort is necessary to a crop of flowers that will be remunerative. This applies also to Albertini, Stuart, and in fact all of the late sorts, for they can not be piched back in the lot later than July 15 if you wish to have flowers by Christmas. Of course McGowan is not a late sort but outside it is a slow grower except in a few very favorable localities. As soon as cuttings are rooted transplant at once

into good rich friable soil on a bench if possible or in flats. I prefer the former as we can set the plants very close, leaving them for four to six weeks, when they can be reset into flats and placed in a cold frame and hardened off for early planting in the field; this latter point is very favorable to the plant, for if set in the field before May it becomes well established before warm weather sets in. Never use a pot for a carnation cutting.

It is now time to use manure water quite freely as the plants have undoubtedly used up most of the manure that was in the soil, and it must be replenished. If we could only get some of that good old guano such as we got fifteen years ago for manure water. It did make plants jump; but as that is impossible take the next best thing, which I believe is night soil, cow or sheep manure, the latter in water or as a mulch. Do not stir the surface of the soil now as those little white feeding roots are in plain view and have come to the surface for something to eat, so give them what they want in the shape of a good mulch. Any well decayed manure finely sifted and placed evenly on the surface keeps it moist and loose, and you know this is necessary.

CHARLES H. ALLEN.

Dean Hole Carnation.

We recently received blooms of this carnation from John N. May, and were very favorably impressed by it. The color is a clear canary yellow, pencilled with carmine at the edge. Flower good size, calyx long and strong, stem very robust. Mr. May tells us it is a very prolific bloomer, and it is certainly a most attractive flower.

Cypripedium Isabellæ.

(*C. Spicerianum* × *C. niveum*).

The seed from which this plant was raised was sown July 6, 1889, and its first flower opened in December, 1894, about five years and five months from the time of sowing. This hybrid is well intermediate between the two parents; if anything, the *niveum* blood seems to predominate. The leaves are lanceolate, thick, beautifully marbled; the scape is 6 inches long, covered with short down; bract is long, lanceolate, adhering to the ovary which is hardly thicker than the stem. The flower is well proportioned; dorsal sepal broad, arching, white shaded pink and with a deep purple line in the middle; lower sepal smaller, oval, whitish, petals rather broad, undulating, white shaded and lined with pink; lip rather long, rounded, delicately shaded pink on white ground; staminode hexagonal, prominent, white with a lilac dot. This handsome hybrid was raised by George Williams, Whitinsville, Mass., and exhibited before the Massachusetts Horticultural Society on December 8, when it received a silver medal.

Garden Landscapes.

It has been my intention to offer a few remarks on the artifice of garden landscape as a pendant to the various plant-

ing lists published during the year for the use of the florist. I suppose gardeners generally will agree that much of the work being done is capable of improvement, both as to conception and the coloring of the ornamentation. Very much has been written in the most facile language on the analogies of painting, architecture and landscape gardening. These writings are often delightful and instructive, and I am sure I have often profited and even now profit by the best of them, but I cannot blind myself to the fact that they are often overstrained, inasmuch as the painter finds his conceptions or copies his studies outright from the very materials that the gardener has familiarized himself with from infancy, while the architect from the earliest dawn of civilization has gone to nature for all that is best in his forms and ornamentations. It is not that either of them excel the gardener in a knowledge of forms, but that they sometimes pay more attention to harmonizing them that we see them occasionally excel in design. Where they fail, and fail absolutely as a rule, is in their want of progressiveness and continuity. It is not only necessary to paint a picture or wash a landscape plan and place the material on the ground, but its development must be tended from year to year, or everything but the bricks and stones and gravel will grow away (and far away) from the ideas of the mere map maker. It was the superior taste, the knowledge of material and of ultimate effects that made the conceptions of Marnock and Gibson what they were, and the constancy of their supervision that prevented their obliteration, for landscape gardening is a progressive art.

Given the taste and knowledge, which a florist is far more likely to possess than an architect or an engineer, and the method of producing a garden landscape ought to be simple. First then as to material, don't spoil your garden by planting new and untried things; try them or watch your neighbors try them; don't plant sweet bays and English laurels and Scotch brooms by scores where they will be frozen in a year or two, and spoil the picture. Don't listen to the nurseryman who thinks of nothing so much as selling a big bill of trees. Prepare your ground honestly and well, manuring and subsoiling where necessary, and with your grass growing or prepared for think calmly how you can best embellish it. Do not, I pray you, fall into the common error of supposing that the vile ribbons of gravel, dirty yellow or dirty blue, or dirtier brown or white, are embellishments to a surface of nature's green grass. Use them only where you obviously must. You will find customers in plenty who know more about these things than you do who will point triumphantly to the "line of beauty," and you can't agree with them, but where your advice is sought you can do much towards a better taste. Man has gone as far as he can in imitative building. The earliest examples of Gothic I have seen were borrowed directly from the skeleton of the elephant or the buffalo. Later the trifoliations were as manifestly borrowed from the leaves of the field, and the best of the decorations from its starry flowers, or its rayed sunflowers. This architecture in its best examples is always pleasing, because in its pinnacles and its terminals its conception is manifestly material. But nowhere in nature can you find any warranty for transferring such gridironing and curving to the ground. The very cows when they must make tracks often make more direct ones than you do, and more pleas-

DEAN HOLE CARNATION.

ing in their curvatures because more obvious in their reasonableness.

Your best work then will depend not upon transferring fanciful lines from a paper plan, but in taking the very best and choicest of material objects and so grouping them that they will not only be nature, but nature mended and assisted by the exclusion of weedy and gross competitors.

With your smoothest foreground of grass the success of your work and its permanency will depend primarily upon the knowledge with which you select and the taste with which you group your trees and shrubs and plants. So far as outlines go you may often assist your understanding by taking a few of the leading forms of leaf, the horse chestnut, the liquidamber, the various maples and ash, and arrange them on the margins of your writing table, not to be servilely copied, but to give you hints as to what a projection or a recess should be, and how arranged. Remember always that the basis of all your best works must be single plants or trees, and groups of such plants and trees. It is impossible to give rules; every piece of ground requires different treatment. But the obvious blunders may easily be avoided. The whole "frame" of ground should never be filled as you fill your wire frames; it is only the "groups" which may be so filled, and the proceeding is similar, substituting plants and shrubs for a ground-work, and the smaller flowering trees,

sparingly used, as the projecting embellishments. The common shade trees of the nurseries should be but little used indeed in your urban preserves. Their place is along the sidewalk in the large park or in the forest. It is but rarely that a city or suburban lot has room for the development of more than one or two of them.

Trenton, N. J. JAMES MACPHERSON.

A New Year's Reverie.

The beginning of a new year is naturally a time for reflection. It is well to look carefully over the record of the year just gone, and see what we have accomplished; what mistakes we have made, where opportunities have been neglected and to what degree we have made advancement, so that with the light of its experiences to guide us we may plan wisely for the year to come.

As the incidents of the past twelve months pass in mental review before us we are duly impressed with the fact that no year is ever all sunshine or all shadow, but that each in its progress is sure to bring us a fair proportion of prosperity as well as adversity and that he is happiest who can most fully adapt himself to both phases, enjoy the fun and relaxation which may come in his way, and thus equip himself to bear up all the better under the burden which the serious side of life imposes.

The florist, perhaps more than any

other man, should be a thorough philosopher. He must not get discouraged if everything is not yet perfect, ever bearing in mind that although harassed by rust, nematodes, Greeks, anthracnose, hail storms, Dutch bulbmen, sow bugs or what not, yet many keen delights of which the uninitiated have no conception are exclusively his. Who can describe the intense pleasure experienced in watching one's own seedlings, as one by one they come to maturity; the day dreams and night visions of the fortune that lies hidden in those slowly developing buds which like the "watched pot that never boils," seem to take an eternity to open? And then the fun of naming the new comers, searching through the dictionary for appropriate titles that have not already been seized upon by somebody else. And the enjoyment of contributing to some other grower's prosperity by investing one's good money in their much lauded novelties, with the prospect that said novelties may go to the dump after one season's trial, on the principle that "it is more blessed to give than to receive." And the seedsman—why his life would scarcely be worth the living were it not for the everlasting recreation of maintaining a sharp watch over the other fellow, and the satisfaction of spending last year's profits on gorgeous pictures for next year's catalogue. One year ago the outlook was anything but cheerful; much anxiety was felt as to the effect of the prevailing business depression upon the flower trade, and predictions of misfortunes which were to provide the sheriff with plenty of employment were in the air, while the most sanguine could only hope for the best. But in spite of dire predictions we have managed to pull through. It has not been the best year we ever saw, but then it might have been so much worse. As a body we are more numerous than ever before. We are growing in numbers and importance, greenhouse building has continued with but little abatement and progress is apparent wherever we look.

As to the future we need not despair. A more hopeful feeling is abroad in the land and the croakings of a year ago disturb us no more. To press onward and upward should be our aim and with this in view we need have no solicitude as to the final outcome. Year by year we see the buying public becoming more and more discriminating. We must keep pace with them. Old methods satisfy them no longer so it's time we should drop them and catch up with the head of the profession. Then at the close of another year we can look back upon our record 1895 with deep satisfaction and pardonable pride.

W. J. S.

Single Pipe Heating.

I see by the FLORIST that several firms at St. Louis are changing to the single pipe system of steam heat with good results. We put up four houses last year and piped them on the single pipe plan, and we have had enough, to say the least. Possibly we put them in on the wrong plan, but we followed instructions closely.

There is no trouble in getting the steam to circulate nicely when the pet-cock is opened at the upper end of each pipe, but the trouble is when there is 10 to 20 pounds of steam, which often happens. Every pipe is hot from 10 to 50 feet at the lower end, and what are you going to do about it? There is no valve to shut off the steam, and you have 6 or 8 2-inch pipes full of steam for 40 or 50 feet when

only one is wanted. We all know how a pressure of steam will press back the air; as some one has put it, it is a valve-saving, coal-eating system. How do the St. Louis brethren handle that part of the system? It certainly is simple, too simple, I am afraid, for you have no bridle for your beast. Besides, by having your flow pipe running up one end of a block of houses and the return coming back (especially when houses are standing in a block by themselves, away from a shed) the return and flow pipe beats the ends, which is generally a weak spot. We changed it, so our flow pipes are all under the benches, and they all return to the boiler through one 2-inch return pipe. We use a $\frac{3}{4}$ -inch valve to feed our 2 inch pipes.

Let us have some more light on this system, although I don't think we would be tempted to return to it. T. C. JOY.
Nashville, Tenn.

I do not know how the houses referred to were piped, but presume they were correct, as they say they followed instructions closely. The real trouble was at the boiler end of the system, and is explained when they state that they carry from 10 to 20 pounds of steam. Now I am not prepared from experience to say what that amount of pressure would be on pipes filled with air if kept up constantly, but would expect it (the steam) to unite with or displace the air entirely after a reasonable time, and that appears to have been the case in this instance.

Judging from Mr. Joy's remarks they have no way of controlling the amount of steam or pressure desirable, and ask "What are you going to do about it." I can only answer from my own experience. With automatic dampers I find no difficulty in controlling the amount of steam needed, and in my case from 2 to 5 pounds is all that is ever carried. In fact my steam gauges oftener stand 1 to 2 pounds than above that, and they work very smoothly. I have two boilers, and for winter use they are connected and run together, but in spring and fall they are disconnected and either one run separately, thereby economizing fuel and reducing pressure as the number of pipes are reduced. I think the best results are obtained both in service and economy by low pressure in this system, and provisions should be made to secure it.

THOS. FRANKS.

Overhead Heating With Hot Water.

I was quite interested in your article from J. P. Ring in the FLORIST of November 3 on overhead heating, or rather overhead feeding, as I have been using the system in three of my houses, and supposed I was alone in it. I think I am alone in one respect, as I am using hot water instead of steam, and think it, from its operation, to be the best system of piping I have ever seen or tried, especially for hot water, and don't see why it would not be the same for steam.

I am heating about 10,000 feet of glass, a large shed and my dwelling by hot water from one boiler, and in three of my houses am using the system of piping overhead as described by Mr. Ring, but differing somewhat from him. In one house 50x10 even span (carnations) I use one $1\frac{1}{4}$ -inch pipe overhead each side of the path or walk, and return with four 1-inch pipes under each bench, eight in all, and at the end of the house one $1\frac{1}{4}$ -inch pipe returns all these to the boilers, distant about 75 feet. One $1\frac{1}{4}$ -inch globe valve at the boiler operates this house,

and one 1-inch globe valve at return end of each bench enables me to run either bench or both as desired. The valve at the boiler controls the heat in this house without going into the house except to ventilate, and I can tell by the valve how much heat the house has. One complete turn of the wheel of the valve will heat one or both of the overhead pipes to the end of the house without heating under the benches, so that in mild weather the moisture and chill of the house can be controlled without heating under the benches. I have another house 60x20 (three-quarter span) with two $1\frac{1}{4}$ -inch pipes overhead on top of each other on the posts supporting the lower side of the middle bench, returning with four $1\frac{1}{4}$ -inch pipes under each bench (the lower and middle one) eight in all. This brings the overhead pipes about midway of the longer span (facing east) of the roof. At the north end a $1\frac{1}{4}$ -inch pipe returns all these pipes to the boiler, about 25 feet. A valve $1\frac{1}{4}$ inches at the boiler operates this house same as the carnation house.

The benches in this house are about on a level with the top of my boiler, and yet one turn of the wheel of the valve will head the overhead pipes to the end of the house without heating under the benches, and on a night like last night (December 5) about 10° below freezing, a fire at 10 p. m. runs the pipes until about 4 a. m. without changing the valve, the overhead pipes taking the chill off the house and keeping the glass more clear of frost not so much drip is experienced in the morning, and as "mums" are grown in this house its benefit can be imagined.

Another house 80x20 even span (and connected to my dwelling) has one 3-inch pipe overhead about midway of the eastern span of the roof, and runs to my dwelling. Six $1\frac{1}{4}$ -inch pipes drop from the end of this pipe into my cellar and are carried under the joist and come up in different rooms into radiators, passing back into the cellar, and returning to the greenhouse, coming up under the three benches, and are then carried through this house in four 1-inch pipes under each bench—twelve in all—while at the end of this house two $1\frac{1}{4}$ -inch pipes return these to the boiler about 60 feet distant. Two $1\frac{1}{4}$ -inch valves at boiler control these pipes with two 1-inch valves at return ends at the greenhouse. This 3-inch overhead pipe is hot all the time, but with the two 1-inch valves and the boiler valves can heat the house and return all through the greenhouse through a $1\frac{1}{4}$ -inch pipe (as one bench has three 1-inch pipes and one $1\frac{1}{4}$ inch pipe) without heating the greenhouse except by the 3-inch overhead. In severe weather this pipe (3 inch) keeps the roof clear of frost and controls the moisture, but not any more than the two $1\frac{1}{4}$ inch pipes in the other houses. I like it very much and would if erecting a large plant pipe every house overhead with small pipe— $1\frac{1}{4}$ -inch or under—and return under the benches with 1-inch or $1\frac{1}{4}$ -inch pipe, especially if using hot water, and that would be my heat. Have tried steam, and—well, throw the mantle of charity over it and call it a mistake.
A. T. HOYT.

Value of Fresh Palm Seeds.

The latter part of November I received a consignment of five thousand freshly gathered seeds of *Livistona rotundifolia* from Demerara, S. A.. They are now germinating, after being planted but six weeks. I have others planted way along last spring that are still at it; of course, they were not a fresh article but may

grow like canna seeds past their prime—"after many days." *Livistona rotundifolia* is a diamond of the first water, does beautifully on the continent and is a thing of beauty in the public parks and gardens. It is also an easy and quick grower in this hot moist climate, and ripens seeds abundantly. The Botanic Gardens in Demerara are much the finest in all the tropics, an exotic Kew out of doors.

Arecae make magnificent clumps. *Livistona glauca* is a sight to behold, as well as hundreds of other species, added to the seventy native varieties in habitat. Taking it all in all, you have a palmetum glorious to behold; the shimmering fronds of the noble *Eta* interlace with the bronze green *cocos*—the tall graceful *enterpe* towers high above the spreading *Koke-rite* and *martinezia*—and so on, ad infinitum. But why rhapsodize when it only makes one restless to leave frost and snow for the dear sunny south. I much prefer to study nature than "work her"; however business is business.

GROVE P. RAWSON.

Water Gardens at Clifton, N. J.

The lily ponds of Wm. Tricker & Co. at Clifton were during the past season visited by thousands of people, to many of whom doubtless this was the first illustration of the possibilities in aquatic gardening and the almost incredible results that may be accomplished in the transformation of a tract of worthless, boggy and unsightly land into a spot of surpassing loveliness.

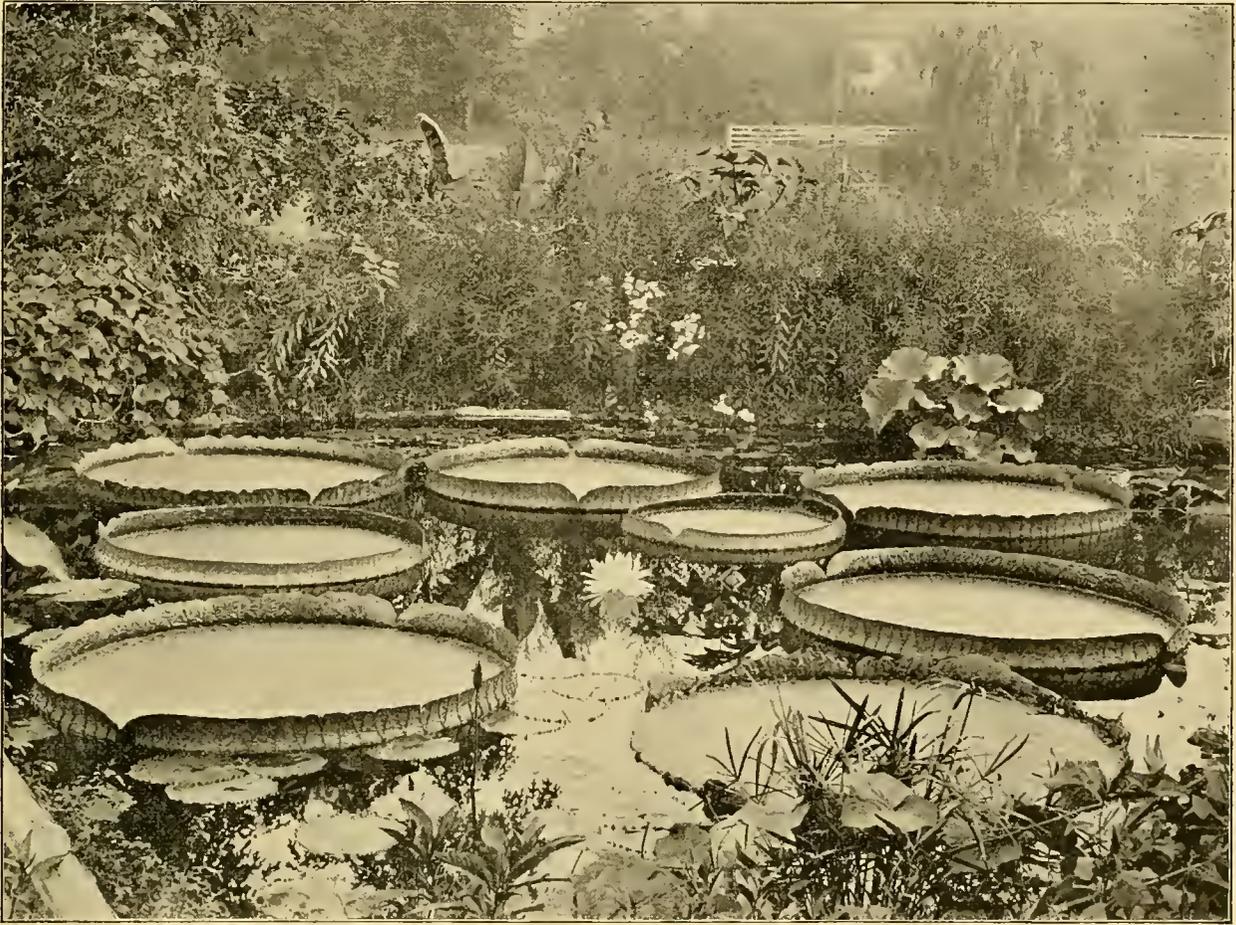

In our issue of August 2 we gave some account of the enterprise which is so well illustrated in the photographs presented in this issue. The pictures speak for themselves; the *Victoria regia*, *nymphæas* and *nelumbiums*, the luxuriant borders of bog loving shrubs and herbaceous plants, the clumps of noble grasses, form a most beautiful and attractive scene, and it is not surprising that it drew crowds of admirers.

The piece of land utilized for this water garden was originally about as uninviting a piece of bog as could be imagined. The several ponds are divided off so as to suit the requirements of the different species of plants grown, arrangements for heating the water and giving protection in cold weather being provided for the tender and half hardy sections, but the greatest attention is paid to those varieties which are entirely hardy, and to increasing the list of novelties in this line.

Mr. Tricker's paper on aquatic plants read before the Society of American Florists at Atlantic City was a most useful contribution to aquatic literature, and all those interested in water gardening are advised to peruse it carefully.

Mass. Hort. Society.

In addition to the regular appropriations for premiums at the exhibitions throughout the year the Mass. Hort. Society offers very liberal prospective prizes for new fruits, flowers and vegetables. These include a prize of \$100 for seedling native grape, \$60 each for seedling pear, apple and hardy grape; \$30 for strawberry; \$40 each for cherry, raspberry, and other fruit. In flowers \$50 each for seedling rose, camellia, *Azalea indica*, tree *pæony*, hardy *rhododendron*, herbaceous *pæony*, hardy *azalea*, *chrysanthemum*, single flowered tuberous *begonia*, and other flowering or foliage plant. In vegetables \$30 each for early potato, late potato, and other seedling

A CORNER OF THE WATER GARDENS AT CLIFTON, N. J.

vegetable. The schedule conditions under which these prizes may be competed for may be had on application to Robert Manning, secretary, Horticultural Hall, Boston.

The following program of meetings and subjects for discussion for the season of 1895 has been issued:

January 5. Annual address by the president.
January 12. Days with our birds (illustrated), by Mrs. Kate Trvou, Cambridge.

January 19. Flower pots and their manufacture, by A. H. Hews, North Cambridge.

January 26. Fungus diseases of ornamental plants, by Professor Byrou D. Halsted, Botanist and Horticulturist at the New Jersey Agricultural Experiment Station, New Brunswick, N. J.

February 2. Hardy plants and shrubs and their arrangement, by J. Wilkinson Elliott, landscape architect, Pittsburg, Pa.

February 9. Glass houses, their construction and heating, by Henry W. Gibbons, of Hitchings & Co., New York.

February 16. Economic entomology in relation to trees, shrubs and plants in parks and private grounds, by E. B. Southwick, Entomologist to the New York Park Department.

February 23. Experimental evolution amongst plants, by Professor L. H. Bailey, Cornell University Ithaca, N. Y.

March 2. A talk on gardens, by D. H. Coolidge, landscape architect, Boston.

March 9. Budding and grafting, by Jackson Dawson, Arnold Arboretum, Jamaica Plain.

March 16. Tomatoes, by Professor W. M. Munson, B. S., Maine State College Agricultural Experiment Station, Orono, Me.

March 23. Edible native fungi, by John M. Kinney, Boston.

March 30. Commercial fertilizers as applied to horticulture, by Professor W. H. Jordan, Director of the Maine State Agricultural College Experiment Station, Orono, Me.

Our trade directory and reference book for 1894 contains 270 pages of information of real practical value to every one in the trade. Price \$2.00.

New York.

The meeting of the Florists' Club on Monday evening, January 14, was a veritable feast of felicitation and congratulation. The first exercise on the program, retiring president O'Mara's valedictory, set the pace for everything that followed and good nature prevailed throughout. Mr. O'Mara spoke of the pleasant features of his year of service; he had always tried to do his best and if errors had been committed or he had offended anyone the fault was of the head and not of the heart. He congratulated the club on the material progress made during the year just passed and complimented especially the committee intrusted with the club's interests on the trip to Atlantic City, and the essayists who had contributed to their entertainment and profit, referring pleasantly also to the trip to Oakdale and the hospitality extended by Mr. J. H. Taylor on the occasion of his smoker.

President-elect Chas. H. Allen, being escorted to the chair, thanked the club for their confidence and kindness, expressing his appreciation, of the high honor conferred upon him in selecting him to preside over a body of men which has no equal in this or any other country in respect to the lines of business represented, and which although originally started for social purposes mainly has now become a power in the land and a great educator in many ways. He asked the hearty support of its members for the officers and committees, promising that active steps would be taken towards assuring a fall exhibition and perhaps

small free monthly exhibitions as well. He advocated the enrollment as honorary members of gentlemen who from their position or attainments should be deemed entitled to the honor and at the same time lend prestige to the organization. The vice-president elect C. G. Weeber, Treasurer C. B. Weathered, Secretary John Young and as many of the trustees as were present were then severally presented to the club, each promising his best efforts in the year to come.

The treasurer's report showed the club to be financially in good condition and from the report of the secretary it was learned that the list of members in good standing had increased from 149 to 185 during the year; also that there had been two deaths in the ranks, L. Fremin and T. L. Russell. The proposed amendments to the by-laws were adopted and Messrs. R. M. Grey, A. Wallace and Chas. Webber were appointed as the entertainment committee for the coming year. The president announced that at the next meeting the subject of the disease affecting Harrisii lilies would be fully discussed. It was also announced that meetings would hereafter be called to order promptly at 7:30 p. m., regardless of the number present.

An invitation was extended by Mr. H. A. Siebrecht for the club to visit the greenhouses of Siebrecht & Wadley at New Rochelle for the purpose of inspecting the new rose Belle Siebrecht as growing there, and it was voted to accept the invitation and go in a body on the train leaving the Grand Central Station on Wednesday, January 23, at 12 o'clock noon. Two

large vases of this rose were exhibited on the table. Votes of thanks to the retiring officers, also to Mr. J. N. May for his services in staging the club's exhibit at the Philadelphia chrysanthemum show were unanimously passed.

The Very Rev. S. Reynolds Hole and Mr. W. Bayard Cutting, being proposed for honorary membership, were duly elected by acclamation.

The meeting of the Bowling Club on Monday afternoon was a rouser and much enthusiasm prevailed. Keppler was as usual a wonder in making difficult spares, Hafner and Koffman scored their customary record at either talking or making a noise, Doran and Burns were always ready to "go you a quarter," and Asmus had fun at everybody's expense. At the business meeting Alex Burns presided with firmness and dignity, six new names were added to the roll and a vote was passed inviting the Flathush Bowling Club to meet the New York aggregation in a friendly contest on Monday, February 4.

Cut flower trade has been anything but satisfactory during the past week. Prices on many kinds of stock have been ruinously low. Violets have perhaps suffered the greatest set back and the figures now realized are not more than one half what the growers looked forward to. There are hopeful signs that the worst is past now, however, and that while prices in general are apt to rule low yet there will be a gratifying demand and a market for most of the good stock that comes in for the next six weeks. But fancy prices for anything are plainly out of the possibilities.

At W. L. Swan's Seawanhaka greenhouses at Oyster Bay there is a seedling canna which promises to be a leader in the dark foliaged section. It has been named The Professor in compliment to foreman Jas. Clark, who is familiarly invested with this title by his good natured employer. An immense quantity of bedding plants are grown and used on this place, which is beautifully located on one of the most attractive spots on the northern Long Island shore. Crotons have proved exceedingly valuable and satisfactory here as bedders, coloring up grandly in full exposure to the sun. The greenhouses are lighted throughout by electricity.

Robert J. McCullough, late of 82 Montague street, Brooklyn, has disappeared, leaving his wife and a number of creditors to mourn his departure.

Frank Millang is doing a fine business at the 34th Street Market. His innovation in making this his permanent headquarters proves to have been wisely planned.

Cards are out announcing the approaching marriage of Miss Minnie H. Gentzel to Jos. A. Manda, Jr. The ceremony will take place at Milburn, N. J., on Jan. 23.

Mr. S. C. Nash has been confined to his home by sickness for the past two weeks.

H. C. Neubrand of Tarrytown will open a retail store corner of 68th street and Columbus avenue, about February 1.

Chicago.

Although the transient business is still very quiet, there is a decided improvement in the line of decorations. We have now entered upon the regular social season, and to judge by the number and extent of the orders that are now being booked for the near future, the season will be quite a lively one. The prospects are certainly much brighter than a year ago, and consequently everybody is looking cheerful. Even the grower wears

a more contented smile than has been his custom for many a day. If the stuff doesn't bring Christmas figures it is at least sold at living prices, and if any stock is thrown on the "dump" it is of a character unfit for use. The demand for really good stock is about equal to supply; perhaps this isn't saying much for the demand, since good quality is not so much the rule as should be. Prices remain the same as last week, with this difference, that the top figures of list quotations are maintained all along the line. First quality Beauties still remain extremely scarce, and much of the second grade stock has to be worked in to fill orders. Bridesmaid is off crop with a number of growers, and with an ever-increasing demand for this rose only a fraction of the demand can be satisfied. Under these conditions it gives the Mermet a chance. The retail boys, however, don't take kindly to the idea of being obliged to substitute the latter for the former, but then it is Hobson's choice—either take Mermet or go without pink roses. The supply of Testout doesn't cut much figure, as there are but very few grown around the city, and these too seem to be off crop. First-class La France are as scarce as the proverbial hens' teeth, in fact there are few, good or bad. The demand for this rose is only local at any time, as it is hardly ever called for in the shipping line. Meteors are more plentiful and the quality improving. Brides have shortened up, and under good demand hold steady at \$5 to \$6 for selected. The demand for carnations is increasing with the supply, which promises to be quite large in a week or two. Prices have stiffened somewhat, and good commons seldom go below \$2. Grace Wilder is the only variety that goes very slow. This variety, at least of the quality as seen in our market, has no ghost of a show with Scott. The Scott by the way is not grown extensively for our market as yet. The growers, however, are now taking hold of it in earnest, and next year doubtless it will supplant Wilder entirely, as the latter has been but rarely grown of satisfactory quality. The supply and demand of violets keeps the commission men guessing. Some days the supply is large and demand light, and the very next day vice versa. As the stock is of that nature that it has to be cleaned up every day, it is not the easiest matter in the world to sell out one day and fill urgent orders the next. There is no trouble whatever with real good stock which sells itself; unfortunately there is too much of the poorer quality. In bulbous stock there is the addition of tulips, La Reine, a few Proserpine and Chrysolora, but as yet of poor quality. A few Von Sion have also made their appearance, and sell readily at \$4. Mignonette is rather slow, with little or no demand for the poorer grades.

Shipping trade has improved considerably, and the demand in this line is now fairly active.

One by one the old pioneers of Chicago's early floricultural history drop away, to join the silent majority. By the sudden death of Mr. Samuel Muir at his home on Prairie avenue on Saturday last Chicago has lost one of its ablest and most honored florists and horticulturists. His old establishment on South Park avenue and 31st street was a landmark for many years. His down town store on Lake street, then the leading thoroughfare of Chicago, was one of the very first attempts in this line. Here, with many others, he was burnt out in the great fire of 1871. After several changes Mr. Muir

finally built a range of houses on Michigan avenue, where he soon built up a prosperous business. His sterling qualities as a business man, coupled with a genial nature, made him many warm friends, who sincerely mourn his loss. At the obsequies, which were held on January 15, many of his numerous friends and brother florists were in attendance, and many a fragrant blossom offered by loving hands testified to the high esteem felt for him now resting beneath the sod at Oakwood Cemetery.

Mr. O. P. Bassett started on a business trip to the east last Tuesday.

Visited Chicago: J. G. Cheever, North Attleboro, Mass.

In a recent conversation among a number of those in the trade the question arose as to whether the late Samuel Muir or the veteran August Dresel had been longest in the business in this city. Mr. Dresel, being present, said that he came to Chicago in 1866 and that Mr. Muir was then in business near the corner of South Park avenue and 33d street. He called upon Mr. Muir on his way into the city from Lafayette, Ind. Mr. J. T. Anthony said that Mr. Muir's establishment on South Park avenue was built on ground that was a part of old Camp Douglas, which was occupied by the soldiers during the war and till the fall of 1865. Mr. Muir built soon after the camp was evacuated. He had worked a year or two at Lake Forest previous to this.

At the annual meeting of the Horticultural Society of Chicago, held last Saturday afternoon, officers for 1895 were elected as follows: Wm. H. Chadwick, president; E. G. Uihlein, 1st vice-president; F. J. Lemoyne, 2nd vice-president; Martin Ryerson, 3d vice-president; Wm. C. Egan, secretary; W. N. Rudd, treasurer. J. C. Vaughan, G. L. Grant and O. P. Bassett were re-elected members of the Executive Committee. A goodly number of new members were elected, and the annual reports showed the society to be in good condition.

The officials of the International Exposition to be held in Honduras, Central America, in 1896, are negotiating for the World's Fair Horticultural Building at Jackson Park. If the arrangements are carried through the building will be taken down and shipped by rail to New Orleans, going thence by steamer.

Application has been made for a receiver for the World's Fair Floral Co.

Boston.

There was quite an interesting exhibition at Horticultural Hall on Saturday, January 12. It was prize day for Chinese primroses and several growers staged well grown plants of these useful winter favorites. Nothing new or striking was shown among the plants, but among the cut blooms contributed by W. E. Coburn there were some pretty novelties in color and markings. L. W. Goodell showed good blooms of chrysanthemums L. B. Bird, R. M. Grey and a yellow seedling. Sewall Fisher's seedling white carnation was on exhibition again and showed up well. Some Marie Louise violets picked from pot grown plants from David Nevins were the finest violets seen in this hall for many a day, and freesias from W. N. Craig were also extra good.

The illustrated lecture on birds by Mrs. Tryon proved to be a rare entertainment. The lower hall was comfortably filled and had it been more generally known what a treat the lecture would be there would not have been room in the building

A CLUMP OF ORNAMENTAL GRASSES AT CLIFTON, N. J.

to hold the audience. In the course of her remarks the lecturer made a commendable appeal for the preservation of the native trees and plants of New England, but expressed disapproval of the introduction of those of foreign origin, claiming that the planting of Japanese and other foreign trees and shrubs will have the effect of driving away the native birds, a theory which is certainly based more upon sentiment than upon fact or reason.

Married, Thursday, January 10, Charles Montague Atkinson and Josephine Rice Simmons. The happy couple started immediately for the south, intending to spend a short time in Washington. A handsome gold headed cane for the groom and an equally valuable umbrella for the bride were the gifts of their gardener and florist friends.

F. L. Hardy has taken possession of the Donovan greenhouses at Natick.

E. F. Costeller has started in business at the Adams greenhouses in Quincy.

Philadelphia.

The illustrated lecture by Prof. John B. Smith, entomologist of the New Jersey Experimental Station on "Insects injurious to plant and tree life" at New Century Drawing Room Monday evening, January 14, was most interesting and instructive. The lecture, which was given under the auspices of the Penna. Horticultural Society, Insect and Fungus Section, was felt to be so important that a whole evening was given to it, and the business

meeting of the society was held on Tuesday following. The lecture was illustrated with stereopticon views thrown on a large canvass twenty feet square. In the course of his lecture Prof. Smith said some insects feed by sucking and others by eating, and different methods have to be resorted to in order to exterminate them, as the same poisons will not kill all kinds. Insects of all kinds are great feeders and are continually gorging themselves with food. Sucking insects are generally covered with a scale or substance that prevents their destruction with ordinary contact poisons. Fish oil emulsion that contains caustic potash, which would eat through the scale, was considered the best remedy. Scale when young move about and are then easily killed, but when they settle and commence life in earnest the scale forms and they are protected from ordinary contact, and extreme measures must be used to kill them, such as will break through their covering either by violence or corrosion caused by some mixture containing caustic potash. Eating insects, such as move about can be reached by stomach poisons. Dry insect powders should be very fine, otherwise they are not efficient. Many have used tobacco dust with good results, while others have failed simply because their powder was not fine enough. Insects have no lungs and breathe through the sides of their bodies through minute tubes, the powder if fine enough is taken in and clogs up the air passages and the insect suffocates. The same result follows with solutions of a whale or fish oil soap, as this forms a film over

the openings closing them up. Powdered sulphur dissolved in water is death to red spider. Sexless insects such as the aphids reproduce ad libitum and the florist should be on the lookout, and on the first appearance apply the remedy. Sweetened bran mixed with Paris green was sure death to cut worms and farmers put this mixture in their corn hills when planting their corn and a little put in when roses were planted in soil where these pests were supposed to be would be death to them. Nitrate of soda would also kill grubs by applying it to soil. Bi-sulphate of carbon if allowed to evaporate slowly in an enclosed box would kill all forms of animal life except scale, and plants infected with spider or mealy bug could be thoroughly cleaned in an hour's treatment. This treatment will also kill weevil in grain of all kinds, but needs to be carefully handled as it is very inflammable. The lecturer was listened to with great attention throughout and received by unanimous vote the thanks of the society.

The business meeting of the society was held at the hall of the College of Physicians, 13th and Locust, on Tuesday evening, 15th inst., Mr. C. Clark, the newly elected president, presided. Bids for the work of erecting the new hall are to be invited at once so as to ascertain the actual cost of the building.

The society has lost a good friend and earnest worker in Dr. Wm. A. Reed, who died, aged 67, on Tuesday the 15th inst. Dr. Reed was a member of the society for a long time, and served several terms as one of the vice-presidents. He took an

active interest in its welfare and was a regular attendant at its meetings.

Business the past week has been only fair except for the Assembly Ball, when the boys were all busy. There is an abundance of flowers except Beauties and hybrids, for which the demand equals the supply. Good Beauties and Belles bring \$6 per dozen and range according to size down to \$1 per dozen for the shortest stock. Most of the large teas sell for \$8 to \$10, a few extra select \$12 to \$15; smaller roses bring \$4 to \$6. Carnations are a shade lower and \$2 is now considered a good price for fine stock; \$2.50 to \$3 is still asked for extra fine flowers. Some very good stock has been offered on the street for 20 cents per dozen by the fakirs, and carnations have sold as low as \$7.50 per thousand. Romans sell for \$2 to \$3, valley \$4. Doubleviolets are to be had in quantity at from 50 cents to \$1.50 per hundred. Smilax sells for \$15. Callas \$1 per dozen. K.

Cincinnati.

The annual meeting of the Cincinnati Florists' Society was held at the society's rooms in the flower market, Saturday eve, January 12. The attendance was small owing to the bad weather.

Business has got down very low again and there is comparatively nothing doing now and not much prospect of more until Easter. Roses are plentiful and more than supply the demand; in consequence prices have taken a big tumble. Other flowers have of course followed suit.

We hear a great many complaints about the Kresken carnation; it is bursting the calyx with many of the growers. We would like to know the cause.

We have been having very cold weather with a large percentage of dark days, the thermometer dropping 8 below zero. In bulb stuff there is plenty to choose from and at low rates. Harrisii lilies are extremely plentiful, with but moderate sales. In price they range all the way from \$2 a dozen for selected long stemmed stock to \$5 a hundred for a fair average grade, and it is needless to say there is more sold at the latter price than the former. Romans are still sent in by the bushel; they must have been purchased in immense quantities, for the stock does not seem to diminish a particle. They run from \$1 to \$3, paper white the same. White and yellow tulips go well at \$4 to \$5, red sell rather slowly at \$3; double daffodils have made their appearance and sell at \$6. Greens continue to go very slowly; smilax was never in less demand.

Carnations are now from \$1.25 to \$1.50 for the general run and \$2 to \$3 for extra stock such as Daybreak, Kresken, etc. Valley is scarce. Double violets sell at from \$1 to \$1.50 for the best.

Mr. Robert Murphy, of Delhi, who has been confined to the house for several weeks, with rheumatism, is able to be about again. P.

St. Louis.

The meeting of the St. Louis Florists' Club was held January 10. The principal topic was changing the time of meeting from day to night session; it was left for consideration until next meeting. After the general routine of business there was a discussion of general topics, such as growing valley, state of business generally etc. The reports were mostly satisfactory.

Business around town is reported rather slow. There are only one or two retailers who report business moving. C.

Young & Sons have a big ball for next Monday night. The ball-room is to be decorated with Mermets and orchids, the hall with orchids and lily of the valley, the drawing room with Watteville roses and Romans, and dining room with Meteors with a center piece of Beauties.

R. F. Tesson has been sick in bed with the grip, but we hope that he will soon be among us again.

The bowling club has just finished another series of twelve games, C. Beyer carrying off both medals with an average of 192½ for twelve games; 255 highest run. Dr. Helwig carries off the medal that very few like with an average of 44 5-12 for twelve games. A. Y. E.

New Brunswick Notes.

Christmas trade was unusually good this season, prices keeping well up. Roses were a very short crop owing to the cold, dark weather, and the carnations held the balance of power.

In St. John McIntosh had a fine stock of late chrysanthemums for which he realized extra prices. McLean as usual showed some extra Perle, Bride and Gontier roses. Jones was unable to supply all orders even after buying the stocks of several of the smaller concerns. Cruikshank's store appeared full all day the 24th, and the absence of stock in their window presaged a fat order book. The funeral of a leading member of the local government also called for a large quantity of floral work, which helped materially to reduce the Christmas stock.

Goold of Sussex showed some of the finest Wm. Scott and Buttercup carnations ever grown in the province, and he didn't have much trouble to sell them. He reports the best Christmas trade that he ever had.

Strange to say in Moncton, only eighty miles from St. John, trade was unusually quiet, the local men sending a large part of their stock to St. John.

Four or five new houses are reported to be in course of construction in St. John by new comers. I am afraid they will find a hard row to hoe, as with the exception of Christmas and Easter the business the balance of the season is badly overdone and the market for both cut flowers and plants very much overstocked.

Your correspondent attended the funeral of the late Sir John Thompson, Premier of Canada, at Halifax, N. S., in charge of the Liberal-Conservative design. The floral display was certainly the finest ever seen in Canada. There was over half a ton of floral designs alone. Harris of the Nova Scotia Nursery had charge of the decoration of the mortuary chamber and he did his work well. Magnificent specimen plants of pteris, davallia, Pandanus var., Lat. borbonica and marantas and a fine specimen of Phoenix rupicola dotted the floors, and pots of calla, Harrisii and narcissus filled the window recesses. Davidson of Montreal had ten pieces, the largest of which, a mammoth wreath six by seven feet, of roses, carnations and Roman hyacinths on a black bier draped with several wreaths of natural flowers, was the largest design ever made in Canada. A slanting cross five feet high was undoubtedly Mr. Davidson's masterpiece, the base being especially well done. The wreath of laurel and cedar sent by the Queen of England was of course eagerly looked for by the spectators, but its association was all that made it remarkable, as it possessed no beauty whatever. A large wreath of autumn leaves with cross of trefoil in center from the Governor-General of Canada

occupied a conspicuous position. The use of autumn leaves in funeral designs is like the use of dried grasses or flowers, much to be deplored, as they possess no real beauty nine times out of ten, and they fail to convey the beautiful idea conveyed by the natural flowers. Harris of Halifax had about a dozen fine designs, the most noticeable of which from a florists' standpoint was a wreath of cattleyas, cypripediums, Lælia anceps and roses. This was a beautifully piece and artistically arranged.

A beautiful standing cross made by H. C. Goold, of Sussex, occupied a conspicuous position opposite the coffin; the press notices of the design were very flattering to its maker. The base of this piece was of Roman hyacinths and his new hybrid amaryllis, Queen of the Day, which was mistaken by the reporters for an orchid.

A magnificent steering wheel made by C. Campbell, of Montreal, 7 feet in diameter, was a most beautiful piece of workmanship and elicited the greatest praise from all who saw it. This design was composed chiefly of Bride roses with an inscription of purple chenille which looked very fine on the dead white. A cross by Scrim, of Ottawa, and a wreath by Parks, of the same place, were good, but arrived badly frosted. A wreath by Graham, of Ottawa, was also well made.

There were a large number of good designs, noticeably a fine scroll of honor from a Boston florist, for which your correspondent can give the makers no credit on account of there being no labels with the packages. S.

OBITUARY.

SAMUEL MUIR.

Samuel Muir, one of the best known florists in Chicago, died suddenly of paralysis of the heart at his residence 4044 Prairie avenue, on Saturday, January 12. Mr. Muir was born at Twynholm, a small village in the southwest of Scotland, February 4, 1833. After receiving a good common school education at the age of 14 he entered the gardener's profession as an apprentice in Glasserton Gardens, Wigtonshire, under Mr. A. McMorran, one of the very best all round gardeners in that country. After completing his term he went to Edinburgh, and entered the extensive nurseries of Messrs. Dickson & Co. of that city, thence to the Botanic Gardens of Manchester, Eng., and at the age of 21 decided to try his fortune in the United States. He landed in New York on April 3, 1854, remaining there one year and a half, afterwards proceeding to San Francisco, Cal. Still following his occupation in some of its various branches he visited Stockton, returning to New York after a lapse of two years, when he married and settled down for some eight years. In 1864 he came to Chicago, and with the exception of one year has remained here ever since. Mr. Muir was greatly esteemed and respected in the trade of which he was a veteran member, and his sudden death comes as a shock to a large circle of attached friends. He was a member of the Chicago Florists' Club and of several other societies and organizations. His funeral took place on Tuesday, January 15, and was largely attended.

SING SING, N. Y.—Mr. W. W. Law will add a new house 18½x133 to his present range of glass at Scarborough, N. Y. It will be iron frame construction, with iron bench frames and hot water heating. The contract has been awarded to Hitchings & Co.

A Campanula Leaf Spot.

The *Campanula grandiflora* as its specific name indicates is a species of blue bell with large flowers. It is in fact one of the favorites in the modern ornamental grounds. Of late this plant has suffered from a blight of the foliage that is easily recognized by the large blotches of brown and white in the leaves. A fair sample of this trouble is shown in the accompanying engraving made from a sun print of a single leaf. The fungus is a member of the genus *Cercospora* and therefore a near relative of the spot of the mignonette so abundant and destructive in some places. Usually the spot is much larger in the blue bell than the mignonette leaf. Under the microscope the fungus consists of fine much branched filaments which run throughout the leaf and come to the surface at the stomata and passing through them extend some distance above the leaf surface. The spores are long, somewhat the shape of a billiard cue and borne upon the extended filaments. These spores fall away easily and are carried to other parts of the foliage and produce new spots.

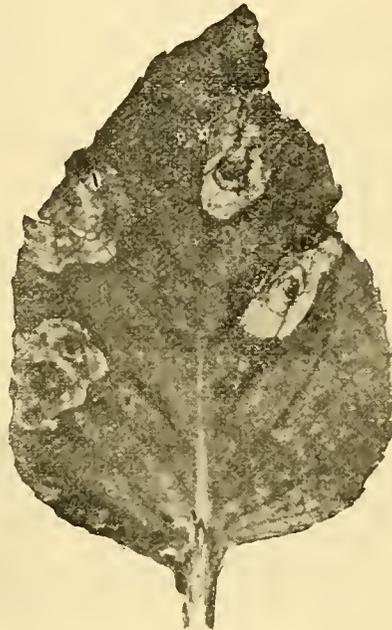

As in the case of the cercospora of the mignonette and that of the celery, for one species is the cause of the "rust" so-called of the latter plant, this one could no doubt be controlled by the use of Bordeaux mixture. BYRON D. HALSTED.

Exp. Station, New Brunswick, N. J., October 25, '94.

Catalogues Received.

Pitcher & Manda, Short Hills, N. J., seeds and bulbs; Currie Bros., Milwaukee, Wis., seeds and plants; James J. H. Gregory, Marblehead, Mass., seeds; L. L. May & Co., St. Paul, Minn., seeds and plants; J. C. Gibson, Woodbury, N. J., novelties in plants and seeds; Oscar Tiefenthal, Wandsbek, Germany, plants, seeds and bulbs; M. Crawford, Cuyahoga Falls, O., strawberry plants and gladiolus bulbs; Coles' Seed Store, Pella, Ia., seeds; W. Atlee Burpee & Co., Philadelphia, seeds; Humphreys Mfg. Co., Mansfield, O., spraying machinery; Bush & Son & Meissner, Bushberg, Mo., grapes; G. C. Watson, Philadelphia, spring bulbs and seeds; H. G. Faust & Co., Philadelphia, seeds; Harnden Seed Co., Kansas City, Mo., seeds; J. A. Everett, Indianapolis, Ind., seeds; Jos. F. Dickmann, St. Louis, seeds; F. Dorner & Sons, Lafayette, Ind., carnations and chrysanthemums; I. N. Kramer & Son, Cedar Rapids, Ia., plants; W. H. Cassell, Canton, Miss., plants; Theo. Koss, Milwaukee, Wis., seeds; Haage & Schmidt, Erfurt, Germany, seeds and plants; H. E. Chitty, Paterson, N. J., new carnations; W. & J. Birkenhead, Sale, England, ferns and selaginellas; C. B. Strong & Co., Sacramento, Cal., seeds and plants; John Curwen, Jr., Villa Nova, Pa., chrysanthemums; H. F. Michell, Philadelphia, seeds; Storrs & Harrison Co., Painesville, O., seeds, plants and nursery stock; W. H. Spooner, Jamaica Plain, Mass., roses; Oscar H. Will, Bismarck, N. D., seeds; Moore & Simon, Philadelphia, seeds; J. Roscoe Fuller & Co., Floral Park, N. Y., seeds, bulbs and plants; J. M. Thorburn & Co., New York, seeds; Wm. G. McTear, Princeton, N. J., chrysanthemums; P. Lambert, Trier, Germany, roses; Dingee & Conard Co., West Grove, Pa., roses, hardy plants, bulbs and seeds.

UNIONTOWN, PA.—Stenson & Mc Grail is the name of a new florist firm here, doing business at 28 Millview street.

CAMPANULA LEAF-SPOT.

NEW ORLEANS.—Christmas trade was about the same as last year with retail prices somewhat lower. Supply was ample and quality better than last year. Increased call for violets.

PLYMOUTH, PA.—The wife of W. A. Pless, the florist, died recently of typhoid fever, aged 30.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant adva. not admitted under this head.

SITUATION WANTED—By a lady of experience in a flower store. Good references. Address A, care American Florist, Chicago.

SITUATION WANTED—By a good gardener and florist; married; German; 15 years' experience. Best of references. K D, care Am. Florist.

SITUATION WANTED—Cut flower arranger, charge of store; first-class designer and decorator, many years' experience. CAPABLE, care Am. Florist.

SITUATION WANTED—By a young man, in a private or commercial place; 8 years' experience. Good references. MILLER, 278 W. Ohio St., Chicago.

SITUATION WANTED—In good place as assistant; 8 years' experience; good references. J N, care Capt. Robinson, Hazelwood, Pittsburg, Pa.

SITUATION WANTED—By young man, 17, 3 years' experience; good home desired, wages not considered. ARTHUR BOGART or W. W. COLES, Kokomo, Ind.

SITUATION WANTED—By a young florist as assistant; sober, reliable and not afraid of work, good references; middle states preferred. Address S, care American Florist.

SITUATION WANTED—By February 1, as foreman in first-class commercial place; 11 years' experience; single. Address A. RASMUSSEN, 310 Liberty St., Warren, Pa.

SITUATION WANTED—By gardener, German, 43, married; experienced in all branches; private or commercial place; first-class references. G H, care American Florist.

SITUATION WANTED—By February as foreman by young man; 9 years' experience in roses, carnations, mums. East preferred. Address FLORIST P O, care American Florist.

SITUATION WANTED—As all round florist; good propagator, growing roses, carnations, chrysanthemums, palms, ferns, bulbs and general stock; single; 19 years' experience. I S, care American Florist.

SITUATION WANTED—By a single man; 9 years' experience; steady and sober; thoroughly understands growing roses and chrysanthemums. Capable of taking charge of commercial or wholesale. Address GROWER, care American Florist.

SITUATION WANTED—By a first-class cut flower grower and successful propagator; understands steam fitting, and not afraid of work. Refer to present employer. Address WORKER, care American Florist.

SITUATION WANTED—By rose grower, 6 years' experience, married, age 26; references John H. Dunlop, Toronto, Ont., and Alex. Montgomery, Waban Rose Co.'s, Natlick. State wages, etc. DAVID COOPER, Waban Rose Co.'s, Natlick, Mass.

SITUATION WANTED—By a competent man, Dutchman, age 27; single, 12 years' experience; special bulb grower, well up in Dutch, French and German correspondence, and some knowledge of bookkeeping; sober and reliable; best of references. Address MELROSE FLORAL CO., 24 S. 3d St., Harrisburg, Pa.

SITUATION WANTED—As foreman or headgardener; 14 years' experience—several in the nursery and seed lines. Married, no family; age 31 years. Been in present place nearly 4 years, but desire to change. When answering, please state terms. Address A FLORIST, care American Florist.

SITUATION WANTED—German, 33 years old and married, who has been foreman in large commercial places in this country for the last 8 years, seeks situation as such after Feb. 12th. Has had 7 years' European and 12 years' American experience. CHAS. JOHNSON, care H. B. Unger, 84 Communipaw Ave., Jersey City, N. J.

WANTED—A man who is well up in general greenhouse work as helper; state wages wanted. J. F. WILCOX, 1132 Pierce St., Council Bluffs, Ia.

WANTED—Catalogues and price lists of greenhouse material, boilers, glass, ventilating apparatus, etc. by ROBT. UNGER, Hanscom Park, Omaha, Neb.

WANTED AT ONCE—A young man as night fireman for greenhouse; one who has been used to steam boiler. State wages without bond. Must be sober and reliable. Address WM. KIRKHAM, Maywood, Ill.

WANTED—Foreman for large commercial place near eastern city; 50,000 square feet glass, mainly cut flowers. Liberal salary, house with all modern conveniences, and a permanent situation to a first-class party; a rose grower especially wanted. Address with full particulars and references COMMERCIAL, care American Florist.

WANTED—A man to take charge of a small place. Must be well up in roses, carnations and general greenhouse work. Wages \$20.00 per month and board, also a percentage on sales, which were \$2,500 last year, and can be increased largely by stirring, capable man to take charge. Place permanent and increase of salary to right man. Address W. H. WRIGHT, 204 1st East St., Vicksburg, Miss.

FOR SALE—Splendid florist store in Brooklyn, one of the best; owner going into other business. Address W. J. STEWART, Am. Florist, Boston, Mass.

FOR SALE—Dean combined stemm boiler and pump, 4-horse power, 1 1/2 inch suction, 1 1/2 inch discharge pipe, good repair. Cost new \$300, price \$150. Write for particulars. C. E. ALLEN, Brattleboro, Vt.

FOR SALE—Nursery 200-500 feet good land, 4 small greenhouses, also lathhouses, many thousands standard roses, leading varieties also tools, horse and wagon; lung lense; nursery near the cemetery; electric cars pass the place; will sell for \$300 cash. Address H. REISS, 257 12th St., Oakland, Cal.

FOR SALE CHEAP—Greenhouse, fifteen acres land, lease to run about three years (and can be renewed), a nice stock of berries of all kinds; greenhouse extra well stocked. Fifteen hundred feet hotbed sash and all necessary implements. Inquire J. D. LITTLE, Agent for Mrs. E. Wilson, Springfield, O.

TO RENT—Near a large Eastern city, an extensive place of 60,000 square feet of glass, now used for cut flowers and bedding plants. Rent moderate; modern dwelling house. To a first-rate grower liberal inducements will be made. Rent and three times its amount in flowers will be taken out by present owner. Address with fullest particulars ROSE GROWER, care American Florist.

FOR SALE CHEAP.

A few hundred strong HYDRANGEAS, out of 7 and 8-inch pots, 2 and 3 years old.

THOMAS HOGG and OTAKSA. Or will exchange for young Perle Roses.

CHAS. FRIEHL, Saginaw, E. S., Mich.

A BARGAIN.

Several hundred lengths of boiler tubing, as good as new for heating; 16, 15, 14 and 11 ft. lengths, 4-inch diameter. 8c. per ft. net on cars here. Also a lot of 3-inch, at 6c. per ft. net.

WM. A. WHITE, Staatsburgh, N. Y.

For Sale or Rent.

My greenhouse establishment on Belmont Ave. near Western Ave. The place consists of 48 lots or 236 feet front on Belmont Ave. by 700 ft. deep, 3 cottages, two two-story frame houses, 22 greenhouses from 10 to 200 feet in length and from 12 to 20 feet in width. The whole place can be bought or rented. Can also be divided, 24 lots with the greenhouses on it, and 24 lots with the other improvements on it. The place is in good order, and a large stock is on hand; is one of the farthest of the kind in Chicago. A good chance for some young man with some means, or for a corporation; and as I wish to retire from business, it can be had reasonable and on easy terms. If rented, a long lease can be given.

AUGUST DRESEL, Belmont and Western Aves., Chicago.

THE BOOK OF THE ROSE, by the Rev. A. Foster-Meliar, Rector of Sproughton in Suffolk, England, is our latest accession to rose literature. Mr. Foster-Meliar writes entirely from an amateur's standpoint—that is, he treats on the cultivation of the rose for love, and not for money, and naturally his cultural methods are intended for the English climate, rather than ours. But the book is most agreeably written, and will be warmly welcomed by those interested in this flower. It contains 336 pages, is amply illustrated with half-tone plates, and the mechanical get-up is excellent. Even though the cultural details cannot be entirely followed in this country they will be found suggestively useful. (Published by Macmillan & Co., 56 5th avenue, New York. Price \$2.75).

SWEET SCENTED FLOWERS and Fragrant Leaves is the title of a book by Donald McDonald, with an introduction by Mr. W. Robinson of the London Garden. It is a handsomely printed book with sixteen very beautiful colored plates. It contains an historical sketch of flower perfumes, and a copious alphabetical list of plants valued for their fragrance, with both common and botanical names. This list seems to be unique; it is certainly very interesting, and gives odd bits of information we do not often meet with. The book is a very attractive one to all lovers of fragrant flowers. (Sampson Low, Marston & Co., London, publishers).

MR. LOUIS MENAND has published a pamphlet containing matter supplementary to his autobiography and has kindly sent us a copy. Like all of Mr. Menand's writings it is very interesting, and it is pleasant to know that this veteran in the trade is still hale and hearty. He wields his pen as vigorously as ever and those who have read his autobiography will be much interested in the supplement now published.

☪ The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS, Toronto, 1st vice-president; A. L. DOW, 114 Chambers street, New York, secretary and treasurer.

NEW YORK.—In town: T. V. Maxon, pea grower, Adams, N. Y.

MOODY BROS., seedsmen, Youngstown, O., made an assignment January 9.

MR. JEROME B. RICE is president of the Electric City National Bank at Niagara Fall, N. Y.

THE Harnden Seed Co., Kansas City, Mo., have re-leased their old quarters for a term of years and will commence building a three-story brick addition February 1.

GEO. S. GREEN of Chicago has disposed of his field seed business to the Albert Dickinson Co. and will remove temporarily to New Mexico, where he seeks a different climate because of the poor health of Mrs. Green.

American Seeds Abroad.

ENGLISH PAPERS CHARGE THAT MUCH OF THE CLOVER SEED IS ADULTERATED.

WASHINGTON, January 5.—The American Consul at Newcastle-on-Tyne has called the attention of the State Department to a notice published in influential English journals calculated to discredit the character of American seeds abroad, and to lessen the market for one of our important exports. The article referred to, which is headed "Seeds or Weeds?" declares, as very large quantities of American clover seed find the way into Europe, attention ought to be very forcibly directed to the results of a very exhaustive investigation made recently by the Ontario Agricultural Station, which confirms those of several other experiment stations in the United States.

To say nothing of Canadian exports, the United States exported in the first nine months of 1894 over 13,060,000 pounds of clover seed, at a value of about 10 cents per pound. This, and also much of that sold generally in North America, is described as "one of the most impure seeds now on the market." The examination showed that in cleaned alsike there was no less than 9 per cent. of weed seeds, chiefly sorrel, while in red clover there was 6 per cent.

In the case of alsike this means that in every half ounce of seed there were no less than 1,800 weeds, and in the six pounds used for an acre of land no less than 700,000 weeds. This is not the whole exposure, for it was found that some of the more unscrupulous seedsmen make a practice of grinding up quartz, drying, sifting, and dyeing it, and then mixing it with clover seed. Nearly all the stations that have investigated the subject join in warning American and Canadian farmers to beware of low priced seeds, to deal with none but respectable and responsible merchants, and to have samples of their seeds tested and examined at an experiment station before sowing. With the exports from America indicated above, the farmers of the United Kingdom are warned that they ought to be equally careful in their purchases of clover or any other seeds from America.

Referring to the paragraph from the daily press Geo. C. Watson of Philadelphia, says: "The allegations of impurity are possibly true enough, but what of it? The seed merchants of Great Britain buy by sample and nobody ever accused them of not having their eyes peeled. If they buy impure seeds from the U. S. they pay accordingly. But as a matter of fact the standard of purity both in America and Europe is much higher to-day than ever before, and there is more choice, pure seeds exported from America to-day than was possible before the improved recleaning machinery was put in. The animus of the complaint is clearly indicated in the concluding sentence where although the allegations were against clover only, the liberty is taken of warning the public against 'any other seeds from America.'"

Mr. Chas. Heath, with The Albert Dickinson Co., Chicago, says: "With regard to purity of American seeds the

seed-producing sections of this country grow a quality of seed which will compare in purity with that of any seed-producing section of any country. Our territory being new, many of the perennial weeds of European countries are not found here. In addition to this, modern inventions have given us machinery which excels any other, and we are able to turn out seed practically free from all foul seeds. Home grown seeds in the U. S. as well as countries on the continent sell for more than American seeds, but one of the largest houses in the American seed trade knows for a fact that American grown seeds are mixed in these countries with home grown, and sold for the latter. The reason for this is obvious, and it is no doubt true that dealers in these countries are led to make these statements with regard to quality of American seed from pecuniary motives."

Seedsmen, Reliable and Otherwise.

T. Greiner in Farm and Fireside.

A "grumbler" sends me a letter full of complaints about the way a certain seed dealer praises his seeds and tries to induce people to buy them, and how prominent writers help the matter along by their indorsements and recommendations. "The fraudulent schemes of seed-sellers," he says, "are a crying evil, which should be abated rather than abetted by standard and admired contributors to our farm papers. My experience with seedsmen has been largely of the green-goods style of business. Rarely one of the boasted qualities of a variety offered at an extortionate price materializes in the crop. The novelty departments of seed catalogues are enough to convince a gray-head that the fear of the devil no longer finds lodgment in the seed shark's breast."

This is pretty strong language. While it may be deserved in some cases, however, I think it is going too far to apply it to seedsmen as a class. We should bear in mind that seedsmen and nurserymen are merchants like other merchants. Why should we expect them to stand on a much higher plane of business morality and business honesty and integrity than grocers, druggists, hardware or clothing dealers? Like all the rest of businessmen, they are in the business for the profits that are in it. Competition is close. To make the business pay, it has to be managed with skill and shrewdness. For every man who gets rich by seed selling, there are a number who make a financial failure of it. To sell seeds is and must be the chief aim of the seedsman, as it is the chief aim of the groceryman to sell groceries.

In fact, to *sell goods* is the great problem, and a matter of existence to them as business men. Let us go into a store to buy some dry goods. The merchant will show us piece after piece, pointing out the good qualities of each as he goes along. When he notices you do not like a certain piece and are not likely to buy it, he will tell you of its imperfections, and show you another which in this or that respect is far better. But he will not often tell you the *faults* of a piece of goods so long as he thinks you might want to buy it.

Do you expect the seedsman to do differently? Would it be "business" to tell you the faults and imperfections of the articles he sells? He might as well make an assignment, or quit business at once. When you go into a store to buy, you expect to use your own eyes and your own judgment in the selection of goods, instead of relying solely on the merchant's representations. If your judgment tells you

that the coat is worth the price you are asked for it, you take it; otherwise, not.

In buying seeds and nursery stock, we can just as well rely a little on our own judgment and discretion as in buying groceries and dry goods. If an agent comes along and offers us cherry trees that will bear a full crop the second year after planting, or cherries as large as pumpkins, or strawberry trees that will have a bushel of berries the next year, and a bowl each of cream and sugar besides, we would simply kick him out of the house.

When I see the pictures of mammoth fruits, of tree blackberries, the descriptions of luscious strawberries that will bear *immediately* after being set out, the melons as big as a wheelbarrow, then I say, "Methinks thou promiseth too much." We must judge by the whole tone of the catalogue, by the pictures and the descriptions, whether the dealer is trustworthy and reliable or not.

Unfortunately, many people like to be humbugged; they would not be content without it. This is a truth so long and generally recognized that it was proverbial among the old Romans long before Christ's time. *Mundus vult decipi*—the world likes to be swindled. So long as there are people looking for and willing to be enticed by the charms of overdrawn pictures and descriptions in seed catalogues, so long will seedsmen furnish them. The only way that these exaggerations can be done away with, is to get people in the habit of considering them as a sure sign of unreliability of the dealer, and thus to make them unprofitable.

I myself would fight the evil on other grounds. I would appeal to the good sense and good taste of the catalogue makers. Many of them incur a heavy expense just for the sake of filling the pages of catalogues with meaningless pictures. These picture-overloaded pages are not pretty, and I believe they are not as effective as plainer pages with an occasional original, tasty illustration of some really good novelty would be. The catalogue cuts are now mostly (derisively) called "stock cuts." A first-class agricultural paper would not admit them to its columns. They are the product of wild fancy, not the representation of a natural product; consequently, they are not attractive, not pretty, and fill no place except filling space. A few of our seedsmen now give plain reading matter, enlivened now and then with a photo-engraving. These catalogues are pleasing, because they represent nature and truth.

And I do not think their makers have ever lost a customer by leaving out that surplus of commonplace, unnatural pictures. Let good taste prevail. I believe some catalogues cut down to one-half of their size, saving one-half of their cost and a large amount in postage, would have the same effect as when overburdened with meaningless pictures, if not more. I simply offer these remarks as suggestions. Seedsmen may pay attention to them, or not. I shall feel free to criticize shortcomings of this kind whenever I see them, and to offer suggestions whenever I think they might be of service. But why should I or anybody else grumble because they will not do just as we think they should? We must understand that this is a world of imperfections. None of us are without fault, and the world moves on just the same.

News Notes.

CHESTER, PA.—Shaw Bros. have begun the erection of three large greenhouses on the corner of 13th and Crosby streets.

ELIZABETH, N. J.—Decrease of about 10%. Retail prices same as last year. Supply short. Quality somewhat better. Increased call for carnations.

TOLEDO, O.—Christmas trade was about the same as last year, with retail prices about 15% lower. Supply very nearly equal to demand. Quality improved.

WEST TROY, N. Y.—Isaac Gillet added the past summer a new carnation house containing 2,200 feet of glass, and is making arrangements to build another one in the spring.

SYRACUSE, N. Y.—Christmas trade was an increase of about 20% over last year. Prices about the same. Plenty of flowers and of fine quality. Increased demand for carnations and violets, and pot plants.

HAMILTON, ONT.—Christmas trade was about double that of last year. Retail prices higher. Supply short. Quality hardly so good as last year. Increased call for carnations, flowering plants and pans of ferns.

ALBANY, N. Y.—Volume of Christmas trade and retail prices were about same as last year. Supply good. Quality better. Increased call for violets. High priced roses not much called for. Double the sale of holly and holly wreaths.

DENVER, COL. Probably total Christmas sales were larger than last year as each firm did about the usual amount of business and there are one-third more stores. Retail prices much higher. Supply short. Quality not up to standard.

SAVANNAH, GA.—Christmas trade was considerably larger than last year, the increase being mainly in sales of decorative plants. Retail prices ruled the same as last year. Supply of flowers was sufficient. Roses were better in quality owing to clear weather.

EVANSVILLE, IND.—The Evansville Florist Club has been organized. J. D. Carmody is president and J. A. Howsley secretary. At the next meeting, to be held January 17, there will be a discussion upon the cultivation of chrysanthemums and a paper upon another subject will be read by Mr. Wm. Blackman.

SPRINGFIELD, ILL.—Christmas trade was about same as last year. Supply short. Quality hardly so good as last year. Main call was for roses, carnations and violets. Good demand for plants. It, instead of doubling prices at Christmas, florists in general would advance prices gradually from December 1 it would make things easier. This is probably not felt so much in large cities where they get good prices during all of December.

MONTREAL.—Christmas trade was somewhat larger than last year. Retail prices were about the same. Supply equal to demand. Quality rather better. Increased demand for carnations and violets. Less cash and more credit than last year. Messrs. W. B. Davidson & Sons made a huge wreath 7 by 6 feet for the funeral of the late Premier on the order of the members of the Dominion cabinet, of the choicest flowers obtainable, and the price is said to have been \$3,500.

WE ARE HEADQUARTERS

for all the leading NOVELTIES of merit. We have also ready for delivery a fine stock of the leading varieties of CHRYS-ANTHEMUMS from 2-inch pots, prices of which will be furnished on application.

FOR DESCRIPTIVE WHOLESALE PRICE LIST

ADDRESS **H. E. CHITTY,**
PATERSON, N. J.

WANTED!

A good, free blooming, healthy, vigorous **Yellow Carnation.** Flowers must be perfect, of fair size and borne on long, stiff stems. There must be plenty of pips, and these easily rooted.

AND HERE IT IS—Any one of the following will fill the bill:

ELDORADO—Pure yellow ground edged with light pink. Picotee marking.

KITTY CLOVER—Light yellow striped red with a little white.

EULALIE—Yellow ground penciled with pink.

We also offer this year

PRINCESS BONNIE—A beautiful pink variegated flower of large size; and
DAISY BELL—A white, variegated similar to Chester Pride, but very much larger flower.

Send for general price list of both Carnations and Coleus.

JAMES HORAN & SON, Bridgeport, Conn.

Toronto.

The members of the Gardeners' and Florists' Association will have some very important business to discuss at the regular meeting to be held this week. The committee appointed to consider the advisability of amalgamating the July and November shows will report against amalgamation but will recommend a scheme which if carried through will improve the position of horticulturists in Toronto and three or four other Canadian cities and eventually give horticulture its rightful standing among the professions. This scheme of which I hope to be able to give full particulars next week will require some hard work and self sacrifice at the hands of those entrusted with the task of putting it through, but from present indications I think there need be no fear on that score.

The annual meeting of the Electoral District Society for the election of directors also takes place this week and it is probable that a good many of the gardeners and florists will attend, expecting developments.

Lots of snow has fallen this week and the city is lively with sleigh bells and cyclone electric sweepers. Weather moderately cold and business fairly good.

E.

Worcester, Mass.

The old adage, if you want a thing done do it yourself, or words to that effect, is pretty near right, as I found to my sorrow when the man to whom I entrusted my little report of the New Year's trade handed it to me on the 10th with the superfluous remark, "I forgot to mail it." It is rather late now to say much about trade on the first, but we did a very good business, and the supply of flowers was very short, which brought prices a little higher than at Christmas. There was a big run on carnations, and Daybreak, Wm. Scott, Harrison and a pink sport from Harrison, locally called Miss Burnside, sold for \$1 per dozen, other kinds brought 60 cents. Trade has been fairly brisk this month and prices are very fair, as dark weather has shortened the supply. Good valley and freesia are now in the market, Harrisii lilies are plentiful and W. J. Wood is bringing in quantities of very fine Marie Louise.

I. L. Pillsbury, Galesburg, Ill

CANNA NOVELTIES FOR 1895.

COLUMBIA. From a photograph.

WE offer below our Medal Cannas, the cream of about 2000 seedlings raised in 1891-92. After careful tests and comparison with both new and old varieties we do not hesitate in saying they are essential to none, and combine all qualities essential to good bedders. Orders for these will be booked for March 15th, 1895, delivery.

COLUMBIA (Medal Awarded); 3 ft.; foliage a rich dark green; a strong, vigorous grower, with flower stalks producing as high as seven immense trusses which stand erect; flowers very large and rather compact on spike, though not enough to detract from beauty; petals 1½ inches wide and slightly overlap each other; texture very thick and firm, and flowers will last longer and withstand wind and rain better than any other variety; an early and constant bloomer; color a rich glowing red. PRICE, \$1 00 each; \$10 00 per doz.

PRIMA (Medal Awarded); 2½ feet; foliage green; strong vigorous habit, with large flowers and trusses; color yellow, faintly dotted with scarlet; an excellent bedder, giving a good yellow effect. Each 60c; per doz \$6.00.

TESTIMONIALS.

Mr. F. Kanst, of South Park, Chicago, judge of cannas at the World's Fair, says, Oct. 22, 1894: "I consider the Columbia one of the best Cannas in cultivation."

E. G. Hill & Co., Richmond, Ind., say, Nov. 20, 1894: "Columbia—We consider this Canna in the matter of color, size of flower, size of spike, and habit, one of the very best now before the public."

Robt. Craig, of Philadelphia, Pa., says, Oct. 17, 1894: "Prima is a useful dwarf variety. Columbia I think is decidedly the best Canna of its color."

J. C. Vaughan, Chicago, Ill., says, Nov. 26, 1894: "I believe Canna Columbia to be one of the best scarlets."

Pittsburg, Pa.

The regular meeting of the Pittsburg and Allegheny Florists' Club was held in Magin's Hall, Allegheny, on Tuesday, January 8; there was a good attendance, considerable enthusiasm in regard to the coming S. A. F. convention. The club has 105 members in good standing, and expects to have at least 125 before this year is out, possibly a good many more. Everybody intends to help a little and by this it means a big lot by August.

It being the first meeting of 1895 the nomination of officers for the ensuing year was the principal order of business. Fred Burki of Bellevue nominated A. W. Bennett for president; Jno. Bader of Troy Hill and Jno. Herron, foreman of Allegheny Conservatories were nominated for vice-president; Geo. W. Burke, superintendent of Highland Park for secretary; Fred Burki for treasurer, P. S. Randolph, Geo. Oesterle and F. W. Gibbs for trustees. The election takes place next regular meeting January 26.

At the last meeting a committee of five was appointed to select hall and meeting place for the S. A. F. convention. The committee met at Elliott & Ulam's Monday the 7th inst. and looked over the exposition building, which they consider the best of all, having ample space for the meeting and exhibition under the same roof, and being on the river front will make it the more pleasant. The committee met the president and manager of the exposition, laid the matter before them, and have since heard from them that providing the convention can be held August 6, 7, 8 and 9, we can have the building at a merely nominal figure, if not will have to look further.

F. W. Gibbs made a very nice exhibit of cut carnations, The Stuart being very fine, good stems and no bursting of calyx.

The stores all report trade improving; plenty of cut flowers and very good ones. Funeral work has been plentiful; the weather this week has been miserable.

The Allegheny Conservatories are looking fine; the begonias and primulas making a good show. At Schenley Park the cyclamens are in full bloom and a house of primroses and freesias make an interesting exhibit.

E. C. Reineman left for a trip to the Holy Land, and will be back in time for the convention. BROWN.

Mushrooms in a Carnation House.

I wish to enquire whether anyone has succeeded in growing mushrooms under the benches of a carnation house and if they have, does the ammonia arising from the mushroom bed interfere with the health of the plants? W.

JOHN G. ESLER, Sec'y, F. H. A., Saddle River, N. J

Washington.

New Year's trade was about as usual, good, though it was not to be compared with Christmas. Flowers were plentiful and of good quality. The orders were mostly for table decoration, with an occasional order for either violets, roses or carnations for corsage bouquets or suitors.

Tulips have made their appearance, though but little in demand; white ones are selling for \$1 per dozen. Good plants of azaleas are getting more plentiful and are bringing from \$2 to \$5 each, and are in demand. The majority of the flower work at present is on a small scale, for teas or luncheons with an occasional wedding or dinner, carnations being the favorite flower and used in large quantities.

The weather of late has had a tendency to make good roses scarce, yet there seems to be enough to supply the demand. Beauties are bringing from \$3 to \$9 per dozen; Brides \$2 to \$3; Mermets and Meteors the same; La France from \$2 to \$4; Golden Gate \$2 to \$4; Kaiserin \$3; Perles \$1 to \$1.50. The prevailing prices for carnations are from 35 to 50 cents per dozen, though some fancy ones are bringing as much as \$1 per dozen. Violets remain \$2 per hundred and are very fine. Valley \$1 per dozen; narcissus and Romans 50 cents per dozen. Smilax 25 and 50 cents per string. Asparagus 75 cents.

REYNOLDS.

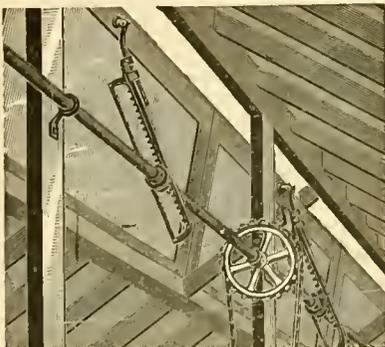

TRENTON, N. J., Jan. 3.—The New Jersey State Horticultural Society held its final session of the year to-day. The following officers were elected: President, E. P. Beebe of Elizabeth; vice-president, I. W. Nicholson, Camden; secretary, H. I. Budd, Mount Holly; treasurer, Charles S. Jones, Newark; executive committee, Dr. J. B. Ward, Charles Parry, J. J. Blackwell, T. F. Baker, D. A. Vanderveer; legislative committee, Dr. J. B. Ward, I. W. Nicholson, Theodore F. Baker; delegate to State Board of Agriculture, Dr. J. B. Ward; delegates to American Pomological Society, Charles Perry and Horace Roberts.

What Growers Say!
A Different Letter Every Week

MIDDLETOWN, N. Y., Nov. 5, '94.
LOCKLAND LUMBER CO., Lockland, Ohio,
Gentlemen:—The past summer I had occasion to buy of you for my new houses sash bars, gutters, ridges, etc., of your clear Cypress and would say that the material was free from knots and sap, well seasoned, and carefully cut to my sizes as per specifications. I also bought of you once before, and judging from these two times, I should say that the Lockland Lumber Co. were an honest, square firm who would do as they agreed.

Yours respectfully, GEO. S. BELDING.

Carnations Around Chicago.

That much progress has been made by local growers is evidenced by the quality of flowers sent in to market, though it cannot be denied that there is still room for improvement. There is one feature in the production of first-class flowers that has received the attention but of very few of our growers, and that is disbudding. That a larger and finer flower can be produced by disbudding is a fact no intelligent person will doubt, but whether it pays to go to this extra trouble and expense is a matter of much doubt to a great many. We are not prepared with figures to prove that it does pay, but the grower who most loudly condemns the practice is generally the one who has never given it a trial. Let him visit some of our wholesale dealers at any day during the season and keep his eyes and ears open and then do a little figuring for himself. At the present date for instance note the difference in prices of any one of the different varieties, say Tidal Wave. Here is a lot with stems 6 inches long, and in every bunch of 25 flowers you may count 50 to 75 buds; these are offered at \$1.50 per 100. And there is another batch with stems 12 inches in length, flowers much larger and finer; you needn't look close, you will see at a glance that these have been disbudded; \$3 is the price, and the flowers find a ready market almost any time. Of course it isn't disbudding alone that makes A1 flowers, and not every bloom grown under this treatment will fetch the top price. Again many a grower argues he cannot afford to sacrifice so many buds, one flower to a stem doesn't pay. Let us still confine ourselves to Tidal Wave and we have 3 buds to the stem on the average; the crown bud opens first and is always the largest and finest flower; this will have to be picked short if the rest of the buds are to be saved. For short stemmed flowers of this variety, which is also true of all the pinks, there is little or no demand; even when flowers are scarce and high the price obtained is rarely more than 50 to 75 cents per 100, often much less. But let us suppose the flowers are sold at that price. The two remaining buds may open at the same time but more often they don't; the one will open 3 or 4 days sooner than the other but is left on the plant until the last flower is ready to pick when it will be found that the color is badly faded; but even if the flowers are in good condition they will lack both in

size and length of stem and will not net you more than \$1 per 100, and if there happens to be a glut the chances are that the stuff won't find a buyer at all. Speaking of short stemmed carnations there is little or no demand for any except white and these only to a limited extent; thousands of flowers that are sent into the market are thrown into the waste barrel and the grower who is so anxious to save every bud finds that his efforts are entirely wasted.

A visit to the principal growers shows that plants are generally in excellent condition. There are weak spots of course in a good many places, and as a class the poorest showing is made in whites.

Silver Spray is still far in the lead as regards the number of plants grown; in quality, however, the flowers are not very satisfactory. In the thousands of blooms sent into the market daily there is rarely a perfect one. The old trouble, bursted calyx, is apparent everywhere. As regards the health of the stock there seems to be less trouble with rust, at least in many places, than was the case last year. This is undoubtedly owing to more intelligent treatment by the grower and by using the various preventives recommended. Still many a bench may be found entirely ruined.

Lizzie McGowan is finely grown in one or two establishments but is very indifferent everywhere else. The finest bench of this variety we ever saw was at John Lang's a week before Christmas. This bench at that time was just coming into crop. The health and vigor of the plants and the mass of buds and bloom was a grand sight. If this variety could always be done as well as this there would be small need of another variety. The weak neck, which is the principal fault of this variety, was certainly not apparent here. These plants were not housed until the middle of November (having been protected against frost by a frame and sash) for the reason that a batch of early "mums" were occupying the space intended for them. Many of the growers do not seem to thoroughly understand the requirements of this variety, hence the inferior quality of bloom. As to rust McGowan seems to be little troubled with it.

Uncle John has been under discussion to a considerable extent of late. "How do you find Uncle John?" is generally the first question asked when we enter an establishment. Well we find it good, bad and indifferent. Good in but one place, fair in two others and bad everywhere else. None of the growers around here went in very heavy on this variety; from 25 to 100 plants is about all you find at any one place. Chas. Hartwig, at Cuyler, has about 100 plants that are certainly as fine a lot as one could wish to see. There is not a sign of rust, the plants are full of buds and flowers of the

BLOOMINGTON, IND.—On January 13 the boiler at the greenhouses of Albert C. Rott burst and he had nearly all his plants frozen before new heating arrangements could be made.

PORTLAND, OREGON.—Christmas trade was about 15% larger than last year with no material change in retail prices. Supply equal to demand. Quality better than last year. Increased call for carnations and violets.

LANSING, MICH.—Harry Mann of the firm of R. Mann & Son died in San Francisco, Cal., January 19. He was returning home from Honolulu, Hawaii, and died on the day of his arrival in California. He was accompanied by his wife, to whom he was married last August.

finest quality and it is pronounced by Mr. H. the very best white ever grown. As to treatment it received the same as all the rest, having been grown in the field in light sandy soil, where it made extraordinary growth. On the bench it is growing in somewhat heavier soil side by side with Garfield, which latter, by the way, are looking superb also.

The two places where the variety is doing fairly are Henry Mundt's and A. H. Schneider's, both of Oak Park. In both places the plants are free from rust, but are slightly affected with bacteria, which disease the plants are now rapidly outgrowing. Both of these growers are satisfied with it and intend growing it next year on a larger scale.

But at all the other places (and we found it in a dozen or more) the plants were literally eaten up with rust. In most of the places the plants have been thrown out entirely. In every instance the plants are reported as having made an extraordinary strong growth in the field and being entirely free from rust until they were benched, when the trouble commenced immediately and in a few weeks ruined the plants past redemption. Soil appears to have made no difference. Some of the stock was grown in the field in a clay soil, others in a light sand and still others in our prairie loam. On the benches too we find quite a variety, from a light soil to a heavy rose soil. Doubtless our growers have read the article by Mr. Dorner in reference to this variety which appeared in a recent number of the FLOWER. This ought to shed some light on this question and we hope our carnation growers will profit by the hints thrown out. It would certainly be a pity to discard this fine variety without a further trial.

Mrs. Mailander is a fine new white that will probably besent out this spring. This variety is grown by Mr. Mailander, of Niles Center. It is a cross between McGowan and Hinze's White, the flower bring almost a counterpart of the latter, with the important difference that it is much earlier. In foliage and habit it resembles McGowan but is a much stronger grower, and during the three years it has been grown in this place (there are three large houses of them this year) it has been perfectly healthy and free from rust. Like Hinze's White the flowers in the first stages of development are of a creamy white, which turns to a clear white in a few days. There is no sign of bursting of the calyx.

In reds we find but very few of first-class quality. Portia is grown extensively almost everywhere. In this variety you cannot help noticing the difference in quality, particularly size, between disbudded stock and that allowed to grow naturally. Schramm Bros., of Desplaines, are picking some flowers of this variety that for size, color and stiff, strong stems are hard to beat. Stollery Bros. also are doing this variety in first-class shape. When you compare stock of this kind with the great hulk of the balance one wonders why it is that the growers cannot see the advantage of disbudding so clearly illustrated here. As to the health and vigor of the plant, in almost every locality there is nothing to be desired.

The Stuart has been tried in a number of places, but proves unsatisfactory everywhere. At Stollery Bros. we saw it in good shape so far as the plants are concerned, but the flowers too often almost single. At other places again the bloom is off color.

Of Garfield we have spoken before. For a variety that has been in commerce so

many years it retains its vigor and health remarkably well, but is of little value to most of the growers here, since almost everywhere it is very late, the first full crop coming in the latter part of January. A few exceptions may be noted. Of Chas. Hartwig's fine stand of this variety we have spoken. Chas. Held also had a fine crop as early as Christmas, and the plants continue flowering freely.

Hector is met here and there, but is not in good form.

A promising new variety is Lizzie Gilbert, grown by Mr. Hammersly of Lake Geneva, Wis. To judge by the few flowers which occasionally find their way to our market, this is a superb variety and well worthy of a trial.

In dark pinks Tidal Wave still holds the boards. As grown by quite a number it is a variety hard to beat. What disbudding will do is demonstrated here most forcibly. As we all know this is a dwarf grower, and during the early part of the season if not disbudded the stems are often very short. By disbudding, however, the stems lengthen considerably, which is a valuable point. As to size and finish of bloom there is no comparison between the ordinary run and those magnificent blooms produced by this method, notably by Henry Mundt, of Oak Park, whose flowers of this sort are simply perfect. Stollery Bros., Heim Bros., F. Stielow and a few others are also growing it very fine.

Coming to the lighter shades of pink we find Scott is in most excellent condition everywhere. Small trial batches of 25 to 100 only are seen at the various establishments, but the remarkably vigorous growth of the stock, its health and apparent freedom from rust, together with fine large flowers of even color and perfect shape is such as will induce every carnation grower to go into this variety more largely next year. Albertini is also quite satisfactory as regards quality, but as the number of flowers produced from a certain area of space or number of plants is far less than that obtained from Scott, and since the flowers, in our market at least, bring no more than the latter, it is evident that it will not pay as well to grow it. Aug Jurgens is cutting some fine blooms of this variety at present.

Daybreak stands peerless in its class as a light pink. It is fine everywhere, grown in a variety of soils; it seems to flourish under most any treatment. We have seen few places indeed where Daybreak is really poor. Of course there is a difference in the quality of the flowers produced at different places. The finest quality of bloom, both as regards color and size are produced from plants grown in a black prairie loam containing only a small percentage of clay, such as is found in many localities around the city. Planted in a light sandy soil, while the plants are fine and flowering freely, the flowers lack color and substance. On the other hand the poorest results are from stock planted in a heavy clay loam.

Nancy Hanks is showing up very well in a few places and so is Aurora. Grace Wilder is still grown in larger quantity than any other pink excepting Daybreak; the quality of the flowers however is poor in most places. Bursted calyx, and streaked and crippled flowers are the universal condition, one of the exceptions being those grown by Wienhoeber & Co., at Park Ridge, which are of fairly good size, color and form.

Helen Keller is making friends wherever it has been tried, which is the case to a very limited extent. The few small

batches we find are thrifty and free from disease. The flowers come perfect, but are not of extraordinary size.

In yellows there are practically none. Heim Bros. have a bench of Buttercup which has done nothing this season as yet, and very little can be expected until spring. Goldfinch we found in but one place, at the Singler estate, Washington Heights. Here it does fairly well, the flowers however are rather small and do not compare favorably with a well grown Buttercup, but it hasn't had a fair trial yet; it promises better than any other yellow yet tried in this part of the country.

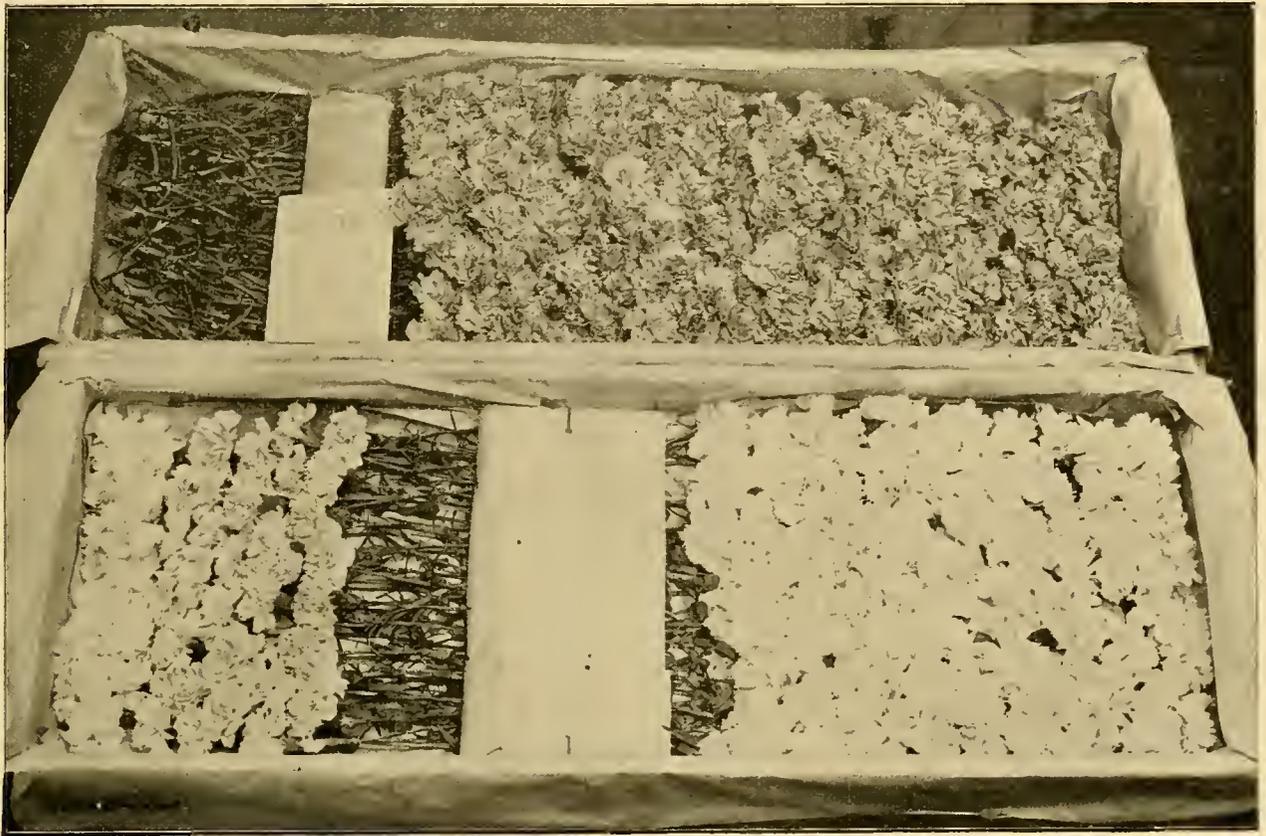

Carnation Notes.

The question has often been asked as to how much a house of carnations will produce, or how many flowers should be cut from a plant to make it a good paying investment. It depends almost wholly upon the grower. If a plant is large and in a good healthy condition it will produce from twenty to fifty single stem flowers, providing all goes well, but it often happens that a bench filled with superb looking plants showing a great profusion of buds will in the space of two or three weeks lose its fine appearance and gradually dwindle away from causes unknown to the grower. It is the same with the carnation grower as with the rose or any other grower; no satisfactory estimate can be made as to how much a house will produce. Many a man has been misled by the appearance of another's plant and has suffered by following the advice of some over-sanguine enthusiast. Many a house which looked very slim when planted has paid well, and then again I have seen houses this year which when first filled promised a rich harvest, but they have done nothing, simply stood still, and the grower is out to a large amount. Now is this the fault of the plant? Oh, no, for other growers with stock in the same apparent condition have been picking flowers in quantity all winter.

The excuse has been made to me on entering a house that was not doing well that the house was too dark, glass too small and that having a lot of sash on hand it was thought best to put them in the shape of a house in place of using them on frames; the house was blamed for a poor crop when the owner was to blame for using such sash for a house. We are often tempted to do this sort of building for the sake of having a house for small stock in the spring, but just as sure as we follow this line when fall comes around we fill that house with nice large plants of good sorts, and then about Christmas we want to kick some one. You see I know how this is, because I have done it and I now have two such houses filled with fine plants, that owing to the darkness of the same will be in fine bloom about March, and I must build again for young stock or throw out the fine plants. Better to refrain from building than to put up poor houses, for the difference in favor of the modern and improved style of building is too great to risk good stock in poor buildings; you will do well to recall the putting of new wine into old bottles.

By the way, there is to be a very large show of all the new and lots of the old carnations in connection with the convention of the American Carnation Society to be held in Boston during the third week in February, and every grower of carnations should go there.

CHARLES H. ALLEN.

PACKING CARNATION FLOWERS FOR SHIPMENT.

Carnations Around Cincinnati.

The varieties of carnations that are grown in Cincinnati and the vicinity are Tidal Wave, Portia, Daybreak, Silver Spray, McGowan, Scott, Diaz Albertini, Adelaide Kresken and a very few Uncle John and Stuart. Of the above named Daybreak is the most popular. Every place I have been the plants of this variety are from six to twelve inches in diameter and are literally covered with buds. It seems to suit everybody's soil and the flowers bring from 1 to 3 cents more than any other variety. It is free from rust. Wm. Scott is a rival to Daybreak. It seems to be giving satisfaction wherever it is grown, and will be more extensively grown here. Tidal Wave is still very popular, but will be dropped by a great many growers. Portia is still the best scarlet we have. The flowers are small but it is an earlier and a much freer bloomer than the Stuart. Stuart does not do much until after Christmas; it is a late bloomer.

Albertini is very fine here and like all fine things is scarce; it is too shy. Adelaide Kresken was giving the best satisfaction until the cloudy weather set in. Every body said it was the best seedling sent out in '94. Early in the fall until December the blooms of this variety were two to three inches in diameter, with a firm calyx and borne on long stems; it is a very free bloomer. But now fully 90 per cent. of the blooms burst. Silver Spray is still the queen of whites here. McGowan is grown by a few, but it does not do well in the summer and the stem is not stiff enough. Uncle John is a total failure here. All the plants rusted so badly last summer that very few of the growers would lift them, and those that did were compelled to throw them out later on. Rust

seems to be making wonderful progress here, and I have seen several houses that were completely destroyed by it. P.

Packing Carnation Flowers.

The accompanying engraving shows two boxes of carnation flowers packed for shipment by Mr. C. H. Allen. The upper box is 3 feet long, 1 foot wide and 4 inches deep, and contains one layer of flowers only. The lower box is 3 feet long, 1 foot wide and 6 inches deep, and contains two layers of flowers, there being a double thickness of heavy tissue paper between the layers.

The engraving is from a photograph secured by Mr. Allen at our request so we might make quite plain to all the points advanced by Mr. Allen as to correct methods of packing, and the value of same in securing the highest market price for the flowers. The picture tells the story plainly and forcibly.

American Carnation Society.

The coming meeting of the American Carnation Society, which takes place at Boston February 21-22, is one in which all lovers of the divine flower will be interested. I trust the members of the A. C. S. will all do something to assist in making it the grandest carnation exhibition ever held, in this or any other country. Nor is this confined to members only; we invite carnation growers all over the country to participate. That great strides have been made will be clearly proved, and we feel sure that all the new varieties will be exhibited. This alone is worth travelling many miles to see. We have the assurance from the Boston club that all flowers sent will be staged by experienced hands. The fact that Mr. A. H. Fewkes

has kindly consented to act is alone an assurance to those who are unable to attend.

The schedule of premiums will appear in the AMERICAN FLORIST at an early date. Look it over carefully, and see if there is not some clause in which you may win laurels. If for no other reason it will give you an idea, when you put your flowers by those grown miles away, whether you are in the swim. I have often heard people at a flower show remark, on looking at some exhibit, "Why, if I had known it I could have beaten that myself." There are plenty of carnation classes, so be on hand at Boston next month.

EUGENE DAILLEDOUZE.

Fertilizers for Lawns.

ED. AM. FLORIST: What fertilizer (odorless) outside of barnyard manure is best to use on lawns, and how much per acre? TEXAS.

To recommend intelligently any fertilizer for lawn purpose the requirements of the soil particularly in question must be known. It is safe, however, to say that nitrate of soda will be beneficial to a grass crop, and an odorless phosphate can be had in the commercial fertilizers manufactured from the Florida phosphate rock, and which contain also a small percentage of potash.

An amount equal to about 250 pounds per acre per annum of nitrate of soda applied during the growing season in three dressings, together with 600 pounds in amount in one dressing of the commercial fertilizer mentioned will make an odorless and efficient manurial dressing for lawns. J. A. PETTIGREW.

Milwaukee, Wis.

THE RETAIL TRADE.

A Convenient Retail Establishment.

We present herewith an engraving of the establishment of Mr. Walter Cliffe, who has lately succeeded Mr. David Cliffe, Germantown, Philadelphia, together with a plan of same. Mr. Cliffe seems to have utilized every inch of space to advantage, and in response to our request for his experience in securing the greatest possible benefit from the space at his disposal he writes as follows:

"My place has a frontage of 150 feet and a depth of 190. The ground is very valuable, and so I plan to have as little waste space as possible. Referring to the figures on diagram 1 is the drive. All coal and other teams pass the office, so the clerk can note all that enters or leaves the place; 2 is the boiler shed, where are my two steam boilers. The bin is arranged so that coal is "shot" in, and by opening a door at bottom will all run out so that it is not necessary to handle the coal except when firing; this shed being warm and dry makes an excellent place for storage of boxes and soil, and is also used as a general workshop; 3 is the stable, and alongside of it is the compost and soil; 4 is the office opening into show and greenhouses; my iceboxes are here, and general florists' stock; electric bells connect it with the greenhouses and dwelling, and they are so arranged that they will ring if desired when the office door opens; this is so regulated by a switch that it will ring the bells either in the greenhouse or my own home, or it can be used to call any of the men, assigning a certain number of rings to each one; 5 is the show-house; here I keep my decorative plants and such others as may be in season, so that it is not necessary to take customers all over the place to show them all I grow; as stock is sold it is replenished continually so that it always presents an attractive appearance; boardwalks make it usable by ladies at all times; 5 of my largest greenhouses open into the show-house, so that it is possible to go from the office to almost any part of the place without going out of doors; 6 is the greenhouses, all built equal span and filled with a general stock suitable especially to the needs of a retail florist; 7 is the potting shed, into which three of the houses open; ample bin space is provided for the different sizes of pots; soil is also stored here, so that it may be ready for immediate use when wanted.

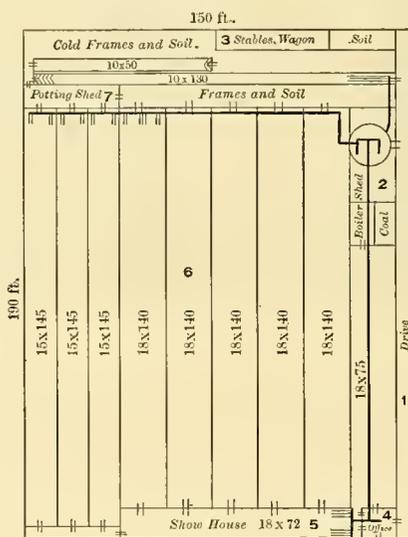

"The heavier lines are feed pipes from boiler; in the 3 houses on the left there are 5 1 1/4-inch pipes on brackets along path; in the 6 houses on the right they run under the benches, 7 1 1/4-inch pipes to a house; in the show-house on one side 4 pipes are overhead so as to be out of the way, while on the side towards the street they run under the side table. The place has been carefully planned, and I do not think any material changes are necessary. Perhaps I may sometime run the show-house along the entire front; it will make a better appearance, and I can then go all through the place without going outside.

"I have gone into unnecessary details, so that you might get all the information you desire. My trade is principally retail, and I have built the place to accommodate that class of patronage. It is kept clean and orderly, paths are clean, and as far as possible it is in good shape all the time. Nine-tenths of my customers are ladies, and I must cater to their tastes.

"Finally, all the coal, ashes and dirt, etc., are at the rear and out of sight from street and visitors going through the place. Having a show-house makes it unnecessary to run all over the place after the various plants a customer may want. If a plant gets damaged in any way it is taken out of the way and put in the greenhouse hospital, and does not detract from the appearance of the others. Flowers when cut are put in the icebox in the office so that we have everything at hand can wait on customers promptly."

Decorations at Washington.

I was fortunate enough to see one of the richest orchid decorations of the season at the Arlington Hotel, the occasion being an afternoon tea given by Mrs. Westinghouse of Pittsburg. The centerpiece was composed of *Adiantum Farleyense* studded with cattleyas, with a center of white lilac, oval in shape. At each of the corners was a smaller oval extend-

A CONVENIENT RETAIL ESTABLISHMENT.

ing lengthwise toward the center, these were also of *Farleyense* and cattleyas, out of which arose four white candles in silver candlesticks capped with white shades, the two nearest the corner of the table being much closer together than the others. These ovals were finished with a handsome arrangement of taffeta ribbon, (perfectly matching the cattleyas in color), which extended in graceful waves toward the center. The ends of these ribbons were lost under four cut glass vases filled with *Farleyense* and cattleyas with a center of white lilac. These vases were about halfway between the center piece and corner ovals. Strewn over the cloth were fronds of *Farleyense* and *cuneatum*.

The lower shelf of the cabinet mantel was banked with *cuneatum*, forming a base for two handsome cut glass vases filled with cattleyas. The top shelf was also banked with *cuneatum*, in the center of which was a bunch of white lilac. The chandelier was twined with asparagus thickly studded with cattleyas.

In the drawing room, the cabinet mantel was draped with asparagus. From the left hand corner of the lower shelf extending to the center of the upper shelf, was a large bunch of long stemmed American Beauties. Drooping from the right hand corner of the upper shelf was

a fall of Mermets. At the end of the room the spaces between the two windows was banked with palms, topped with a large vase filled with long stemmed Beauties. This decoration was done by Messrs. J. H. Small & Sons.

REYNOLDS.

Advertising by the Retailer.

An unlimited amount of money can be spent in advertising. It is almost a talent to know when to spend and when to stop. Local surroundings have much to do with it. If you haven't the ability to write a good advertisement it is best to secure a good advertise writer and send him copies of the papers you intend to use; he will advise as to size of advertisement, how it shall be displayed and write advertisements that will be read and remembered. Advertisements that say you have "the finest stock in town," are "selling out below cost," and all the hackneyed expressions, are worse than useless. Don't try to tell too much at a time; tell the people of one thing and tell it well, giving prices, etc., then stop; next time give them a change of diet. Change the advertisement every time it appears and do not take the cheapest place in the paper; have your advertisement where you are sure those who read the paper will see it; next to live local news is one of the best places.

Keep on the right side of the newspapermen. Give them a few choice flowers, when they call send a plant to their home; they'll remember it and give you an occasional "write up" that will be worth a dozen advertisements.

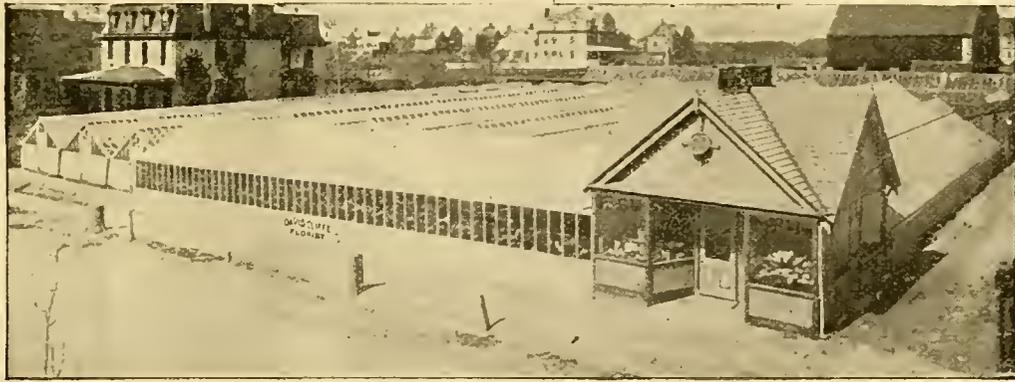

Use good cuts in your advertisements of what you have to sell; they catch the eye; everybody seems to enjoy pictures and if your adv. is well written people will be sure to read it. A cut is the bait on your advertising hook.

Circulars and flyers scattered around indiscriminately are of very doubtful value; probably one-half do not get into the proper hands, then those that survive are glanced at and probably thrown in the fire. Always keep in mind the class that you are dealing with and before you spend your money stop and think whether the proposed plan will reach the ones you intend it for or not.

A neat pamphlet or card sent by mail in sealed envelope is of undoubted value. It is sure to be seen by the person whose patronage you desire, and if you have anything good to offer and tell your story well, you will likely have them call on you. But if the printing and paper are poor and the only information you send is in the stereotype phrases, your money is wasted for it repels a possible customer.

Another excellent plan is, when flowers are going to waste and sales are dull make up boxes of choice cut flowers and enclose a card upon which is written "with the compliments of J. Wilton Wells, (or whoever your name is) soliciting your patronage." It can't help but please, it is sure to be acknowledged in some way and will almost invariably bring an order when flowers are needed. I have found this to be my most effective plan. The cost is practically nothing and results are sure.

Never disappoint customers by advertising something you have not got or in any way misrepresenting any article sold. They will speedily discover the hoax, and feeling that they have been duped once will hesitate to believe your future statements. Better miss a sale any day than to attempt to play sharp with a customer.

A CONVENIENT RETAIL ESTABLISHMENT.

If you want good trade, don't come in to wait on ladies unless you are in presentable condition. Torn clothes, muddy shoes, no collar, flannel shirt, rolled up sleeves, soiled hands, are not crimes but there is a place for everything and the place for the above isn't behind the counter. If you can't keep tidy it's better to keep a young lady clerk, one that dresses neatly, is bright, and obliging. She can keep your books, make up designs, wait on customers, keep your store tidy and it will be money in your pocket to have such a person around the place.

Never allow the men to lounge around the store. It doesn't look well and patrons don't like it. MORE ANON.

The Retailer's Window.

An attractive window has so much to do with influencing transient trade that no retailer can afford to neglect it. Of course stock placed in the window deteriorates rapidly, and the question of expense determines many florists in the meagreness of their display. Whether such economy pays is quite another question.

The first thing to be looked to is cleanliness. This may be considered unnecessary advice, but unfortunately dingy window frames, dusty vases or decaying foliage are not by any means unknown, and any one of the three is fatal to a good effect. Another frequent error is the use of moss, which may once have been green, as a background. The yellowing tint which wood moss takes on after once drying always has a decayed look, and it is doubly faded when contrasted with fresh foliage. Keep your moss for your baskets, and never let it appear in the window. Nothing else equals lycopodium or small ferns, and these are the only appropriate materials for such use. If you have the window bedded with lycopodiums, with a few well arranged small palms or ferns at the back a single vase of flowers will complete the display. Indeed, we often doubt whether cut flowers can compare with flowering and foliage plants for a window display. Take a window backed by palms, and carpeted with lycopodium, with a few small coxos here and there, in the center a blooming angræcum, lycaste or cypripedium, and no cut flowers except perhaps two or three bunches of violets lying on the lycopodium. Orchid plants are particularly good for this purpose; they are usually odd or beautiful enough to attract notice, and a little card may be placed against the window calling attention to any special feature, just as the jewelers do.

For where one person would look at an unlabelled *Vanda Sanderiana* a hundred would gaze in awe were it placarded "The \$5,000 orchid."

There is more than some retailers think in having some plant or flower a little unusual in the window. After looking at a dozen vases of roses in Brown's and Jones' windows people will take far more interest in Robinson's bank of yellow primroses, particularly if he has a little card calling attention to them as Disraeli's favorite flower, the emblem of Tory politics. We have seen a block in front of Thorley's window all afternoon, because there was a showy specimen of the bottle-brush tree on exhibition; in fact many ordinary shrubs, well forced, will collect an admiring crowd.

There is another thing to be carefully avoided, and that is the use of some drapery fabric as a background. This is not very often seen, but whenever it is the result is disastrous. Millinery effects are well enough in candy stores, but they put one's teeth on edge in a florist's. We have seen a window most elaborately arranged with fine hybrid roses utterly ruined by a background of Nile green drapery. The ideas expressed by good judges regarding table decorations may be studied profitably in arranging a window. R.

Miscellaneous Seasonable Hints.

About February 1 is a good time to sow seeds of several plants that are important to the retail florist. If you are not successful with carrying over verbenas, get some seed of the best strain procurable and sow at once. Seed of this once most popular plant is generally fresh and good, and the plants raised from seed are free of all disease and sure to be thrifty, growing vigorously all summer. By sowing now you can get a cutting off each plant by April 1. You cannot be sure of the colors you will get in seedlings, but our leading seedsmen now offer a strain of seed that will produce colors about equal to the named varieties. Sow in a temperature of 55° and when the plants are up and potted keep in a night temperature of 50°, which will suit them best right along till a higher natural temperature comes in spring.

Petunias are now very important plants, for they are used for several different purposes. The choicest named varieties can only be perpetuated by cuttings, but 95 per cent of all the petunias sold each spring are raised from seed. Be very careful that you obtain a good strain of seed. I know this is difficult to do, but

remember—don't hesitate over a dollar or two when purchasing seed of florists' flowers. A dollar saved on a thousand seeds of petunias can easily mean a loss of twenty dollars when they come in flower. This applies not only to petunias but to all flowers known as florists' flowers, such as cinerarias, cyclamens, primulas, etc. The seedsman or the man who saves the seed and who with great care, skill, and expense selects and fertilizes the plants showing only the best character, discarding all inferior flowers, must have remuneration for his time and trouble, or he will go out of the business. Buy only double petunia seed; you will get 60 per cent single from the best double strain you can buy. The seed is very small, and must be carefully sown. My method is to sow in shallow pans or boxes. Make the surface of the soil perfectly level (to prevent washing) and firm it down. Then water thoroughly before sowing. Then you don't have to water but very slightly after sowing the seed. Sow very thinly, the seed is so small you are very apt to let it drop much too thickly. After sprinkling the seed on the surface press down with the bottom of a clean pot and no covering is needed, except a piece of thin cloth, which can be laid over the surface and kept moist. This will prevent to a great extent the drying out of the soil, and can be kept on till most of the seeds have germinated. As soon as they are well up give them a light place, but never let them dry out too severely. They are best handled when quite small. I take them from the seed pan and put seven or eight in a 2½ or 3-inch pot. When they begin to crowd in that they are ready for a 3 inch pot, in which size most are sold. A practiced eye can easily pick out the double from the singles long before they flower, but it is difficult to impart that knowledge. The leaf of the double is usually lighter in color and the surface is not as smooth. If you can pick out the doubles it pays to pot up a few hundreds into 4-inch pots; they will make sturdy plants, develop their showy mottled flowers, and bring as good a price or better than a 4-inch geranium, which has taken more room and five months more time to grow.

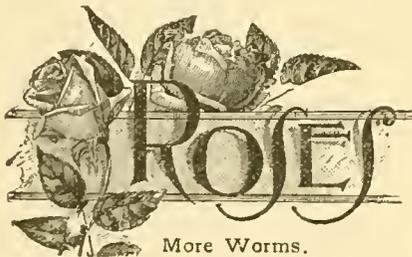

Sow smilax now to renew your beds next July, you need not encumber your benches with a flat of smilax seed. It will do just as well under a rose bench, and can remain there till the plants are 2 or 3 inches high. I believe in a good strong 3-inch pot plant of smilax for July planting. Between that and a weak little plant will be just one crop of strings the following season.

Don't forget to sow *Grevillea robusta* next month. This plant is proving to be of increasing value every year. It is a rough and ready fellow and will stand a lot of hard usage. Sown in February or March you can have fine plants for the following winter. It is good for the center of a vase. In cheap decorations it is most useful. I keep it under glass the whole time. A moderate temperature suits it at all times. It needs no antitoxine or any other cure for rust, smuts, bacteria, or parasites, for it has none of them.

It is much too early yet to sow seeds of our popular annuals such as asters, etc., but order them soon and have ready when the time comes. As every seedsman now advertises Vick's branching aster there is no harm in my saying a good word for it. It is a wonderful aster, and you can not afford to be without it. I have found it several weeks earlier than Truffaut's *Victoria* and other varieties, so it should be sown a month earlier than those kinds. If you still grow *Pyrethrum aureum* sow at once. If you don't raise *Lobelia E. speciosa* and *gracilis* from cuttings, which you should do, then sow the seeds without delay; it takes a long while to raise good plants from seeds.

I suppose after New Year's you began to pot your zonal geraniums from 2 to 3-inch, giving them more room. About the middle of February or sooner if you choose is a good time to increase your stock of this staple article of the florist by taking off the tops of those that are large enough. It will give the plants plenty of time to break and be in full flower in May, and the young plants will make the best of bedding plants. Don't trouble to put the cuttings in sand; just pot them firmly in 2-inch pots, water once thoroughly, and then till they are rooted be careful and not overwater. They will make better plants than if rooted in the sand, for there is no "draw up" or check given to them. The weather now is most favorable for propagating all such plants as coleus, *Achyranthes*, etc., plenty of bottom heat, and do not delay with any stock that you wish to increase. Propagating is so much easier now than when the sun shines hot and bright.

WM. SCOTT.

More Worms.

ED. AM. FLORIST: I send a box of earth containing some worms and larvæ that I found in my rose bed at a place where two or three plants had died. They were near the surface. Can you tell me what they are and if there is a remedy?

Des Moines, Ia. J. T. D. FULMER.

Your correspondent's sample of worms proves to be one of the family of wire worms known as elateridæ. This is rather an extensive family and they vary considerably in size and shape, also in color; they are all more or less injurious to plant life, in fact, I believe, in their grub or worm state they are all injurious to the young, tender roots of plants. In their beetleform they are known as "snap

beetles," "skipjacks" or "click beetles" from the peculiar noise they make when disturbed or in motion.

A remedy against their destructive properties in the open air is quick lime, thoroughly stirred to the earth and the soil kept continually moved, but this is out of the question for the greenhouse. If your correspondent can get any clean soot from a factory I would advise him to spread some of it over the soil of his benches where these things are most troublesome; a thin coat, just enough to see that it covers all the surface of the soil. The syringing of the plants, or watering, will carry this down to the roots and also to the neighborhood of these worms and it is very detrimental to their progress. If the first dose does not

THE NEW SINGLE VIOLET CALIFORNIA.

stop them try another one in about three weeks, being careful not to over-dose it sufficiently to affect the roses.

If your correspondent's soil is naturally troubled with this class of insect I should advise him when preparing it to go into the greenhouse to add considerable soot and also fresh lime, thoroughly incorporating the whole, and turn it over several times so as to get it into shape, or what would be better, give his land a good dressing and plough it in before using it the next season, then the rains, etc. would carry the lime and soot down into the soil and drive all the worms, etc. out of it; it is really one of the best ways to exterminate them.

Different members of this large family remain in their larval state from one to four years. The one that your correspondent sent sample of is of the one year family, and in the spring, say end of May or early in June, it will be easy to tell if there are many coming up from the soil from where he gets his greenhouse material, by the presence of the beetles above described. In that case I would advise him to try to destroy as many of these as possible by running a roller over the ground at least once a week; this crushes them all, or virtually all of them and gives them no chance to deposit their eggs to produce another crop.

JOHN N. MAY.

New Violet "California."

We present herewith an engraving from a photograph of this new single violet

which is claimed by the introducer to be a novelty of extraordinary merit. It is stated that the flowers are so large as to cover a silver dollar, have stems 12 inches long, are very fragrant, color pure violet purple. The San Francisco *Examiner* of January 13 devotes nearly a full page to an illustrated article headed "California Brobdignagian violet." The introducer of the new violet is Mr. Emory E. Smith, Palo Alto, Cal.

Swainsona Galegifolia Alba.

The accompanying engraving is from a photograph of a house of swainsona at the establishment of Mr. David Cliffe, Germantown, Philadelphia, Pa., who writes:

"The plants are in ordinary soil (no manure) such as I use for carnations. They commence to bloom in the cutting bench, and keep it up summer and winter, apparently indefinitely. My original stock plants are still growing and bloom on the bench where first planted. They have had no manure, and the soil is a mass of roots. The only special care the swainsona needs is that it be kept rather dry when first planted, as otherwise it has a tendency to rot at the surface of the ground. It is by far the most profitable plant I grow."

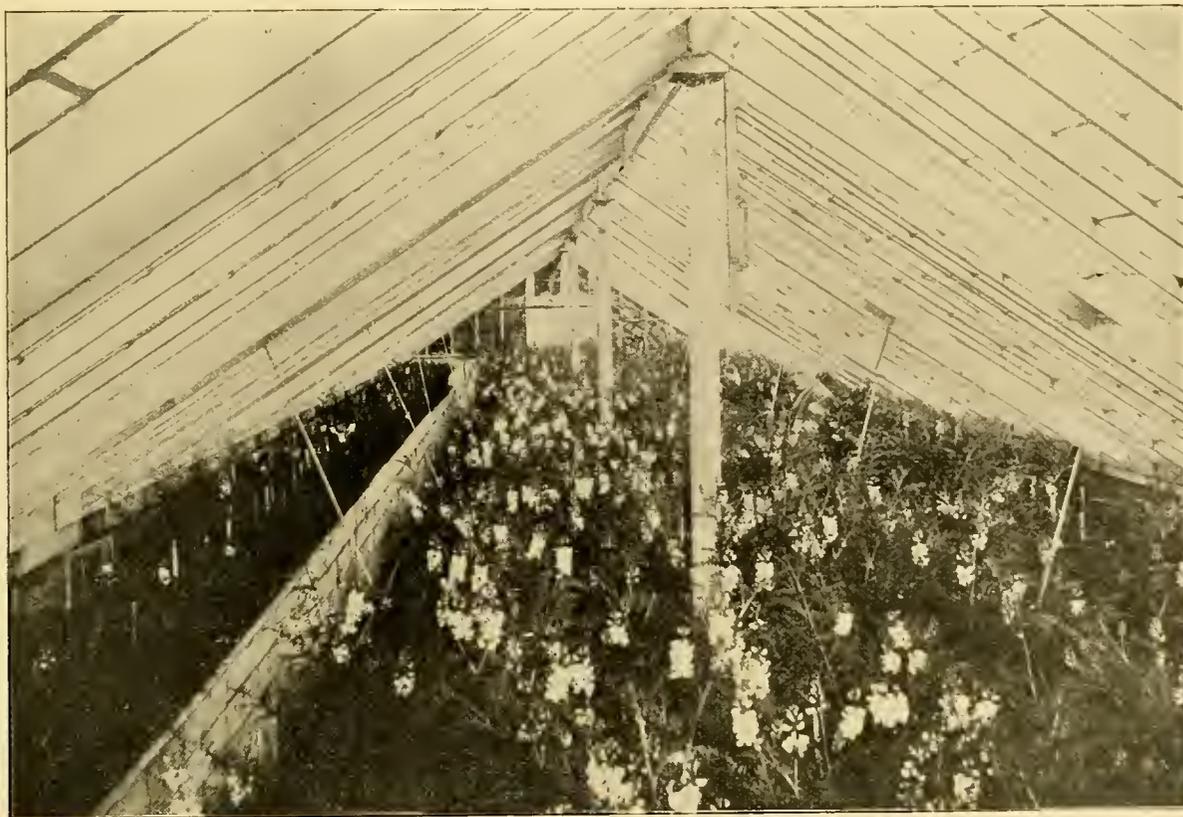

Winter Flowers.

I can not tell if the fashions are changing, or competition urging, but evidently the specialty growers are breaking into greater variety. The rose men are taking up with chrysanthemums and carnations, the chrysanthemum men with cannas and seeds, the lily men with nursery stock, the nurserymen with "laying out," and the orchid men with bougainvilleas. But all the true progress in American floriculture seems to have been made where the grower has confined himself to one, or a few, well chosen plants. It is well that the market grower can concentrate his attention when it produces such results as have been witnessed with forced roses, carnations and chrysanthemums.

It is the luminous city florist who can best dispose of and properly display a novelty. It matters not from whence he derives his light, it beams upon the customer. Very often his knowledge of plant names and methods of culture are sadly deficient, but although his customers realize it they can't correct him to a great extent, and his missionary work continues. He will in time come to be understood.

The public conservatories which are constantly being added to at the centers of population will in time produce more or less of a revolution, and the city grower will undoubtedly find himself trying to attract at least a portion of the enthusiastic populace to his private show. How much more he is doing this than his father ever did, perhaps he scarcely considers. It is to those whose greenhouses and grounds are accessible that the value of a variety sufficient to keep a "show house" attractive will commend itself.

December is a dull month over most of the northern temperate regions, and it is not until the sub-tropics are reached that flowers can be looked for in quantity. Where the daily temperature reaches from 60° to 70°, falling at night to 40° or 50° for a short time only, there the churches can decorate with roses from the hedges, tree fern fronds from the forest and rhododendron flowers from the copse. Perhaps the showiest garden

MR CLIFFE'S HOUSE OF SWAINSONA.

plants in such places are derived from the southern hemisphere where spring and summer prevails and plants bloom naturally at the bidding of a Christmas sun.

Mandevillea suaveolens, show peleronums, heliotrope in hedges, fuchsias, cianthus, acacias, are in profusion in the cooler climates, and bougainvilleas, bigonias, combretums and ipomœas where it is warmer. But occasionally among all these children of a southern sun some indigenous plant will compete for honors, and carry them off. The most gorgeous floral spectacle I ever saw broke upon me in the midst of a leafless, dried and almost parched tropical forest. It was a moderate sized tree of *Butea frondosa*. It varies in size as apple trees vary, and during the dry season becomes denuded of leaves as they do. About Christmas or New Years these bare branches, limbs and even the trunk becomes clothed with flowers, thickly as *Cercis canadensis* or japonica is clothed—but the flowers are like the single flowers of *Erythrina cristagalli*, in bunches of three or four together as the red buds are, and brighter by far than the coral flowers. My! if a florist could produce such a New Year's show as this would he not advertise himself?

But few orchids are found where it is so warm as the dry foothills where these beauties grow; in the zone above where the moisture begins to condense and form clouds there they appear, and with them I think one of the most beautiful purple and gold flowered climbers I have ever seen, *Thunbergia Hawtayneana*. This plant is not large and it is susceptible of pot culture. I have seen this flower described as scarlet, but I have no doubt that the newer dictionaries such as Johnson's or Nicholson's have corrected such statements. Vandas grow at the same elevation, and above them ærides, sacco-

labiums, dendrobiums and cœlogyues. Above 5,000 feet the night temperature begins to drop below 60°, and the orchids are rarely found on trees, but are represented by terrestrial species.

I have spoken of *Mandevillea suaveolens* as a Christmas flower, and I am reminded that I have never heard of its flowering in the United States other than California. I have tried it whenever I could, for I am fond of testing the effect of climate upon known characters such as this—but only once—in the lake country—did the plant grow healthily.

Fragrant flowers are commonly appreciated, and the deliciously sweet *Gardenia citriodora* ought to be well tested by some one. Who knows what bench culture might do for it? *Chimonanthus fragrans* and *Osmanthus fragrans* are known but *Luculia gratissima*, although written about, is scarcely ever seen. It needs planting out in a camellia house or rather cool conservatory. Such sweet flowers as these in a florist's box are never forgotten. It is wonderful how a perfume is remembered.

There are a host of things which the florists use as Christmas flowers, hegonias, cannas, epiphyllums, euphorbias, cestrums, hippeastrums, impatiens, passion flowers, *Solandra grandiflora*, *Thrysanthus rutilans*, *Tibandia pulcherrima* (or possibly agapetes nowadays). There is a beautiful rose colored shrub flower growing on the Pulney Hills, locally called the "hill currant" (because its preserved fruits resemble currants) which would be a gem in conservatories.

The varieties of the true *Rhododendron arboreum* and *R. nilagericum* are naturally Christmas flowers, and planted out in English conservatories they flower at that time; florists I notice take to the *rhododendron* as an Easter flower to

some extent, and it is possible that if some attention were paid to early varieties of arboreum blood, etc., such as *Nobleanum*, *Gloire de Gand*, *superbum*, *princeps venustum*, *Chandlerii*, *campanulatum* and so on, very pleasing results might be had for Christmas.

Again, the epacris is rarely seen anywhere but at Boston. But possibly such varieties as *Exquisite*, *Fireball*, *Mont Blanc*, *picturata*, *racemosa*, etc. might be grown elsewhere. There is but little risk in trying these, for if you fail you fail and there's the end on't, if you succeed you can never be loaded with anything worthless or unattractive in an epacris.

Trenton, N. J. JAMES MACPHERSON.

About the Kew Lectures.

The paper in your issue of January 12 by Mr. Michael Barker gives a distinctly false impression of the character of the Kew lectures. They are not botanical lectures—not one in a hundred of them. They are everything other than botanical, except in so far as botany can aid the lecturer in correctly illustrating his subject. A moment's reflection will convince Mr. Barker that this must be so. The men who go to Kew are as he says good gardeners before they go there. They have been trained in various places—Chiswick, Frogmore, Dalkieth, Glasnevin, or perhaps in all of them. Not more than one per cent of them expects to become "professors," and botanical lectures would be distasteful to them. The lecturers know this, and like sensible men they lecture upon matters of practical economic importance. The herbarium can take care of the world's botany, and now and then one of the young gardeners (like W. B. Hemsley, F. R. S.) elects to cast in his lot there—but very rarely.

Kew has done the most good in the world I think in broadening men, so that they know what to leave undone. The result is that anywhere you may go in the British Empire you will find them managing institutions which are called botanical stations or gardens maybe—but which are really places where the economic culture of the various countries originates, and sometimes develops. I doubt if all of our experimental stations can hope to help the world to the extent that two Kew men have done in the cheapening of quinine.

JAMES MACPHERSON.

Trenton, N. J.

Adiantum Farleyense.

The accompanying engraving is from a photograph of a house of *Adiantum Farleyense* at the establishment of Baker Bros., Kansas City, Mo. In regard to the culture of this *Adiantum* Messrs. Baker Bros. write:

"The plants seen in the picture are 15 months old. They are in 12 and 14-inch pots and are from 4 to 5 feet through.

"Our experience in growing for specimen plants is that they should never become pot-bound and should be shifted on until you get them to the size you want them. Then they should be allowed to become thoroughly pot-bound. The advantage of this is to give the fronds the pink tinge that is so desirable in this queen of all ferns. They will never catch the color spoken of while in rapid growth although we could never see that it injured the plant any if it should become pot-bound, and was shifted afterwards, but this will check the growth for the time being.

"We could never see the advantage of keeping the plant to a single crown and would rather see the plant have as many crowns as possible—the more the better as they will thereby make a larger and finer plant. We have tried plants with single crowns and were never able to make what we call a good specimen plant. Our idea of a specimen plant is that it should be a dark green at the base gradually changing to a lighter green advancing toward the top, changing again so that the crown should be a beautiful pink.

"We use most any kind of good rich soil that will drain well. Instead of using broken pots for drainage we fill one-third of the pot with sphagnum moss. Never allow them to dry out while growing on for specimen plants. There is no reason why they should be a difficult plant to raise. It is almost impossible to kill the crowns. When crowded for room we have kept them under the benches for months at a time. Of course the leaves would disappear while under such treatment, but when again placed up on the benches and given care and attention the plants would start up and make as good stock as anything we had on the place. They will stand more abuse and neglect without dying than any plant we know of, and with care the most abused plants can be made the picture of health."

New York.

The annual dinner of the New York Florists' Club which took place on the evening of January 19 was an occasion long to be remembered by those who participated. There were about sixty gentlemen present, including Messrs. Edwin Lonsdale, Chestnut Hill, Pa., O. P. Bassett, Chicago, A. H. Wingett and E. J. Norman, Lenox, Mass., Mr. Russell, Stockbridge, Mass., and Roderick Camp-

bell, Utica, N. Y., as invited guests. The show of flowers on the tables was magnificent. Every grower who had contributed—and there were nearly twenty of them—had evidently selected his very choicest specimens, the splendid new roses Mrs. J. Pierpont Morpan and Belle Siebrecht and carnation Dean Hole holding a prominent place. The flowers were artistically arranged by Mr. Warendorf, who also had decorated the walls and ceilings with a profusion of wild smilax, etc., and in front of one of the mantels was a grand *Cattleya Triaxæ* bearing forty-two blossoms.

President Allen opened the second division of the entertainment with a few words of hearty welcome to the visitors, and then introduced Mr. C. B. Weathered as toastmaster. This gentleman after the applause which greeted him had subsided began by facetiously alluding to the sleepless nights and tired days he had spent in preparation for this duty, asserting that he had nearly bankrupted himself in buying books that he might learn the rules and acquire the art of being a toastmaster; and then called upon Ex-President O'Mara to respond to the toast "Our Nights." Mr. O'Mara was in his happiest vein and his infectious good nature and quick repartee to the witty sallies with which he was bombarded threw the whole crowd into a mood of merry disorder, which for a time gave the astonished toastmaster all he could do to handle. Mr. O'Mara said that this was his first participation in one of the club's nights, so he could not say much on the subject, but he found it hard to be serious in such pleasant company. He complimented the club on this opportunity for social intercourse and himself on having been relieved of the cares of office.

President Allen was next called upon to speak on the future of the New York Florists' Club. He claimed that if this or any other club is to be a success it must be run as any other business venture; there must be a deep interest taken in it and plenty of work done. He asserted that the florists' clubs had been a great factor in the wonderful improvement in the quality of the flowers grown in recent years and made an earnest plea for increased attendance at the monthly meetings.

The Society of American Florists was represented by its president, Edwin Lonsdale. He alluded to the movements in the past which had resulted in the formation of this and other florists' organizations and spoke hopefully of its future. Referring to the approaching meeting of the executive committee at Pittsburg he urged that all those interested should contribute suggestions in advance as to what they believed to be best for the welfare of the society and the profession. As a step in the interest of floriculture he advised that every one having a home should take home a plant or two and test its value as a house plant so that our knowledge in this important direction might be increased. The mention of a home brought suggestions from various parts of the room to Mr. O'Mara that he take unto himself a wife and provide himself with a home and later on start a nursery, and that versatile gentleman responded with a story of the results which had followed the publication in the papers of some matter regarding "hot water plants;" orders for said plants having been received by his firm from far and near, which orders he said he would have been glad to transfer to his friend Weathered had he thought that gentle-

man would have been willing to supply them at twenty-five cents a piece.

Mr. Roderick Campbell was the next speaker and he complimented the club on its evident prosperity and pleasant social relations, praised the splendid display of flowers on the tables and spoke of the elevating influences of the profession.

Mr. J. N. May who was next called upon was greeted as had been his predecessors with a lusty rendering of the good song "For he's a jolly good fellow." Mr. May pointed to the display on the tables in demonstration of the great advances being made in floriculture at the present time and expressed the hope that the New York Club would soon be able to boast a permanent home.

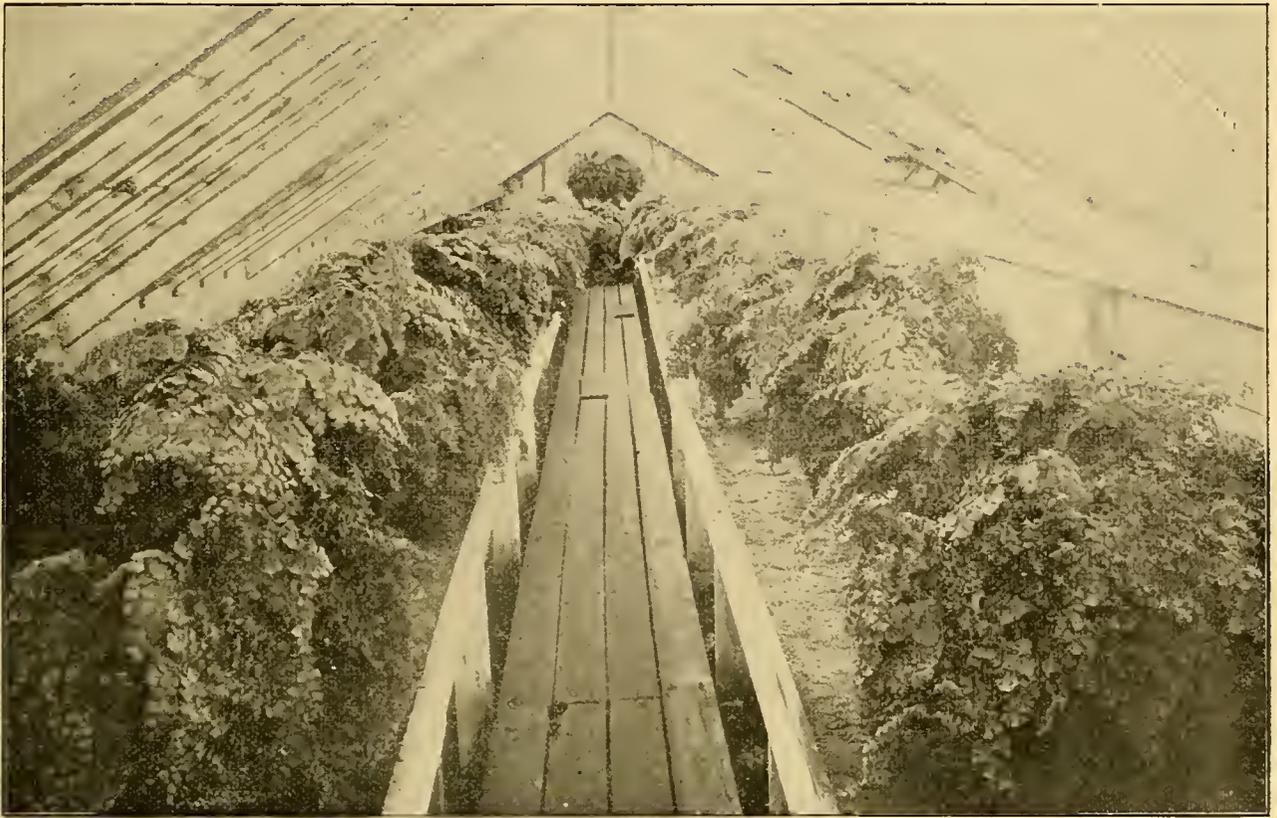

Mr. Norman, from Lenox, Mass., was then introduced as coming from the garden spot of America, a place where angels would be glad to live, and also as president of one of the finest gardeners' organizations in the country, to which he responded briefly.

Mr. W. J. Stewart then responded for the horticultural press. He referred to the great fascination which horticulture possesses for every one and the interest taken in anything horticultural by the daily press, expressing the belief that the inaccuracies frequently given currency through these journals are in many cases chargeable to people in the trade. He reminded his hearers of the great work which the modern horticultural press had done for American horticulture and how much of a necessity it has come to be and solicited for it the support and sympathy which it is so well entitled to.

Mr. Alex Burns in responding for the commission men told of the peculiar relations between grower, dealer and retailer and prescribed the golden rule as the best remedy for any existing misunderstandings. The next gentleman called upon was Mr. E. E. Wells, who was asked to speak in memory of the two members who had passed away during the past year, Mr. Thos. L. Russell and Mr. L. Fremin, which he did in a most eloquent and feeling manner, concluding with a beautiful selection from Bryant's *Thanatopsis*.

After this the speeches were informal and were interspersed with humorous songs and recitations by Wm. Plumb, Fred Weir, Sam'l Burns and Mr. Russell, and it was well past the midnight hour when with clasped hands Auld Lang Syne was sung and the merry festivities came to an end.

More than fifty members of the club accepted the invitation to go to New Rochelle and see the new rose Belle Siebrecht as under culture there. Messrs. Siebrecht & Wadley proved themselves to be most generous hosts and the occasion was one that will never be forgotten by those who were so fortunate as to be present. Stages were in readiness to take the party up from the station and on arrival at the greenhouses after overcoats had been doffed the guests were conducted to one of the long conservatories, where under a canopy of palms, orchids and pitcher plants and amid most beautiful surroundings they found a table laden with good things and they were invited to sit down and partake, a few words of welcome being said by Mr. Siebrecht. The tables were handsomely decorated with vases of the new floral candidate and jardinières of growing plants. This feature of the entertainment having been duly disposed of a couple of hours were spent in inspecting the various houses and their contents, seven houses

BAKER BROS.' HOUSE OF ADIANTUM FARLEYENSE.

being found filled with the new rose. Judging from the clean healthy condition of the plants and the vigor and free blooming qualities shown this rose gives promise of becoming a favorite and a valuable market variety, and the rose men present were at once favorably impressed with it. Among the visitors from a distance were Robert Craig and J. A. Shellem, Philadelphia, R. H. Warder, Cincinnati, J. B. Keller, Rochester, and R. Loeben, Milton, Pa. On the return trip it was announced that a similar excursion to Summit, N. J., would be participated in on invitation of Mr. J. N. May.

By mutual consent Mr. August Rolker withdraws from the firm of August Rolker & Sons to devote his whole time to the auction branch of the business, which he will continue in company with his son as A. & F. Rolker. Messrs. Winfried and Joseph E. will continue as the firm of August Rolker & Sons, giving their entire attention to the florists' seed, bulb and supply business. Each firm liquidates the debts of its previous branch. Mr. Winfried Rolker reports the supply trade as rather in excess of anticipations and florists' seed orders coming in early and brisk, with counter sales very satisfactory.

It is our sad duty to record the death of the wife of Mr. U. G. Scollay, which occurred on January 17, after a long illness.

The absurd story circulated by the metropolitan journals regarding the extravagant floral decorations to be placed on the casket of the deceased Mrs. Astor is false in every particular. Neither is the body in a tomb but is buried in the ground. If, as is asserted, some individual in the trade is responsible for the yarn its author is particularly deserving of severe censure, for such things are an undoubted injury to the florist trade.

Chicago.

The past week has been one of the busiest of the season; parties, receptions and weddings are now the order of the day. Most of the boys have their hands full, the patronage being pretty well divided. Among the notable events of the week was the reception of Mrs. Arthur Caton; O. J. Friedmann did the decorations, which were quite elaborate.

On Wednesday one of the swell weddings took place at Grace Church which was beautifully decorated for the occasion by C. A. Samuelson. An arch the entire width inside the chancel railing and 25 feet high was made of green thickly studded with large clusters of *Harrisii*, carnations and Romans. *Harrisii*, which formed the principal decorations everywhere, were banked in lavish profusion about the altar, flanked on either side by superb groups of palms. The chancel railing was draped with southern smilax. It was altogether one of the most elaborate decorations ever seen at this fashionable church. At the house where the reception was held the decorations consisted of palms, asparagus draping, and a profusion of Bridesmaid roses. The center piece for the table consisted of a large silver bowl filled with about 100 of the finest Bridesmaids seen this season. Around the bowl was placed a heavy wreath of Farleyense from which radiated graceful sprays of lily of the valley.

The reception of Mrs. E. G. Gross on Thursday called for a magnificent display of orchids and American Beauties. This decoration was in the hands of Joseph Curran and was executed with rare good taste. With asparagus for draping and groups of palms here and there, the orchid predominated all over the house.

Cattleyas constituted the bulk, but almost every other form of the orchid family was well represented by such as *lælias*, *dendrobiums*, *phalænopsis*, *cyripediums*, *odontoglossums*, etc. In one room of the house only the orchid was missing, and here American Beauty reigned supreme.

There were numerous other receptions. E. Wienhoeber & Co. were crowded all the week with large orders. On the west side H. F. Halle and I. C. Silliman had a number of decorations.

The shortage of stock still continues and since the cold snap has set in the supply is less than ever. With an active local demand and shipping orders piling in at a lively rate, there is a scramble for stock even worse than at holiday times. Prices have made a sharp advance all along the line and more particularly on first-class roses. Good Bridesmaid bring 6 to 8, Testout is very scarce at 6 to 8, Brides and Mermets 6 to 7, Woottons and La France 5 to 6, Perles 3 to 4.

Mr. T. V. Evans of Riverside, lost part of two greenhouses and his boiler house by fire January 8. Loss about \$500. No insurance.

Last Thursday fire in the warehouse of W. W. Barnard & Co. at 186 Kinzie street, completely destroyed their catalogue, office and packet seed department. The department devoted to florists' seeds being at their Clark street salesroom the fire will not interfere with the regular run of business. The loss is fully covered by insurance.

At the meeting of the Florist Club last Thursday evening there was an interesting discussion upon the cultivation of pansies, the subject being opened in a brief paper by Mr. W. L. Palinsky. Mr. P. grows from fall sowings and carries the plants over winter in frames without

sash, covering merely with leaves, until early spring. In the discussion Mr. Chas. Held said he had found it better to sow in the greenhouse early in the year and later transplant to frames. He had found that with the fall sowing the plants were apt to become too long and drawn up before May 15 and but few sales were made before that date. In response to a question Mr. Held said he set the plants about 2½ inches apart in the frame, and the other growers thought the tendency to draw up was due to his planting so close. None of the others planted closer than 3½ inches, and some as far apart as 4½. President Kidwell followed the plan adopted by Mr. Palinsky except that he kept the frames covered by sash all winter, and placed his covering of straw over the sash and not on the plants. All agreed that the main item was to keep the beds frozen after frost had once entered them. And the experience of all was that the large flowered strains were the best sellers, the public as a rule seeming to demand size rather than rich colors.

It was proposed that the club give its annual ball soon and it was decided to take action regarding same at the next meeting. Features of the next meeting will be an essay by Mr. E. Wienhoeber, and a lunch served in the club room.

Boston.

There has been something like a little revival in the cut flower trade during the past few days. Roses of good quality have been really scarce and there has been a good demand at advanced prices for these as well as for other lines of choice cut flower stock. Growers and dealers both feel encouraged and look for a season of prosperity from now until Lent comes in, at least.

Much interest is manifested in the approaching meeting of the American Carnation Society, and especially in the exhibition, which is to take place at that time. The local carnation growers will undoubtedly make a display of considerable extent, and large contributions are expected from all over the country. Arrangements have been made for the reception and caring for all shipments coming by express for exhibition purposes and a full force of experienced flower handlers will be in attendance at the hall on the morning of February 21 for this purpose. Boxes addressed to Mr. A. H. Fewkes, Horticultural Hall, Boston, will be properly cared for.

Mr. A. H. Hews of North Cambridge gave an interesting talk before the Mass. Horticultural Society on the manufacture of flower pots, on Saturday, January 19. He told of the early history of pot manufacturing, the most ancient art known to man, and described the old methods of hand work and the revolution caused by the introduction in recent years of machinery, also the good results from the adoption of standard sizes, the whole essay proving very interesting to the large audience present.

Providence, R. I.

The Rhode Island Horticultural Society held its annual meeting on the evening of January 16. Officers for the ensuing year were elected as follows: Vice-presidents, L. W. Russell, T. K. Parker; secretary and treasurer, C. W. Smith; librarian, Thomas K. Parker, botanist, Professor W. Whitman Bailey; board of trustees, Silas H. Manchester, E. I. Nickerson, N. D. Pierce Jr., J. D. Fitts, J. G. Massie; exhibition committee, S. H. Manchester,

J. G. Massie, H. T. Root, James Nisbet, F. P. Hunt, N. D. Pierce Jr.; finance committee, Joseph C. Johnson, J. G. Massie, C. G. Godfrey; committee on lectures, L. W. Russell, C. W. Smith, auditing committee, E. I. Nickerson, Henry F. Manchester, Gilbert H. Hagan; committee on necrology, T. K. Parker, George Hunt. President Fanning was tendered the honor of re-election, but declined, and the office will be filled at the next meeting. Ten members have died, nine have withdrawn and thirty-one added during the past year.

Mr. Cyrus C. Armstrong, who was for a number of years secretary and then president of the R. I. Horticultural Society, has disappeared under circumstances which point to either suicide or death from exposure.

PITTSFIELD, MASS.—The Lenox Horticultural Society will hold its first annual ball at Sedgwick Hall, Lenox on Jan. 29.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—First-class place for first-class man as foreman; references exchanged. R. C. care Anchorage Rose Co., Anchorage, Ky.

SITUATION WANTED—By a good gardener and florist; married; German; 15 years' experience. Best of references. K. D. care Am. Florist.

SITUATION WANTED—In good place as assistant; 8 years' experience; good references. J. M. care Capt. Robinson, Hazlewood, Pittsburg, Pa.

SITUATION WANTED—As foreman or to take charge of department, palms, ferns, violas, mums, etc. Address C. HOKANSON, Sibley, Ill.

SITUATION WANTED—By practical gardener in private place, park or florist establishment; age 35. Scotch, married. HOKTUS, care Am. Florist.

Several hundred lengths of boiler tubing, as good as new for heating; 16, 15, 14 and 11 ft. lengths, 4-inch diameter. 8c per ft. net on cars here. Also a lot of 3-inch, at 6c per ft. net.

WM. A. WHITE, Staatsburgh, N. Y.

St. Paul, Minn.

While trade since the holidays has not been very brisk it is improving daily. At a time when the social season is at its height one naturally expects the cut flower trade to be at its best, but so far this year the reverse is the rule. Social gaiety reigns supreme while the florists' business lags. Quite a good many funerals have kept some of the boys more than busy, and on Monday last white flowers were at a premium.

In other lines the demand has been equal to the supply, notably so in Beauties and violets. The month has been darker than usual for Minnesota, and this coupled with the fact that most roses are now off crop, is productive of a short cut and inferior stock. Any sudden demand would create a general shortage.

The Society of Minnesota Florists met at the West Hotel, Minneapolis, Saturday evening, January 12. The attendance was not large, owing to the cold, but the meeting was very interesting and several new faces were seen. The feature of the evening was a paper by Aug. S. Swanson on the evils of the contract system for planting the beds in the public parks. His remarks were more especially directed to Minneapolis, as all parks there are planted by contract and the flowers supplied by the lowest bidder. As a consequence the most common bedding plants are used and prices are made so low that there is no money in it for the florist.

Primarily parks are for recreation and enjoyment, secondarily they should as far as possible be made educational factors. Plants are intended to make such places attractive and inviting and at the same time educate the tastes of the people. New varieties should be introduced and planted and a competent superintendent be placed in charge. Under the contract system many of the parks would look better without any plants at all. Certain beds are filled year after year with the same variety of flowers and the love of flowers is not stimulated in the least. Mr. Swanson's paper was well written and contained some strong points.

Mr. J. L. Johnson, with L. L. May & Co., exhibited a wire frame intended to protect Harrisii blooms when being delivered. It was light, easily adjusted, cheap and effective in protecting the flower. The society adjourned to meet in St. Paul one month hence.

The many friends of O. W. Nordquist, superintendent of the Oakland Cemetery greenhouses, will sympathize with him in the recent loss of his little boy.

Double narcissi, jonquils, tulips and Dutch hyacinths are now in the market.

Mr. Frank Berry of Stillwater was a caller during the week. He reports very good sales for the New Year. FELIX.

Worcester, Mass.

A public meeting of the Royal Arcanum was the event that brought out the biggest palm decoration of the season. Lange was the artist and did himself proud. Another notable occurrence was the Light Infantry ball, which was the ball of the season. A great many dress flowers were sold for this occasion, which reminded one of old times, when everybody wore flowers, but society has not been wearing many for some time, probably because it was so "deucedly plebeian." The hall was decorated in light pink, which made a pleasing background for the palm foliage. Thayer did the palm decoration.

Trade has kept up its lively disposition

New Chrysanthemum, PHILADELPHIA.

The great prize winner. Orders booked now for delivery March 15th.

NEW CARNATIONS 50 cents each; \$5.00 per dozen; \$35.00 per 100.

WHY NOT TRY

A FEW ORCHIDS?

They are Very Cheap. They are Easily Grown. They Sell Well. They always attract attention in store or greenhouse.

BRACKENRIDGE & CO.,
304 W. Madison St., BALTIMORE, MD.

and the supply of good flowers has been just about equal to the demand, near enough to the short end to keep prices well up; funeral work has been very plentiful.

C. C. Kenyon, who bought out Herick's old stand, has been putting in some very pretty window displays, a combination of white and carmine this week was very effective.

Lange is cutting some very fine Day-break carnations, flowers average 2 1/4 inches with 18-inch stems and splendid foliage. A. H. L.

NAPA, CAL.—Leonard Coates has sold the Napa Valley nurseries to Messrs. Armstrong, Parker & Co., of Mountain View. Mr. Armstrong was for several years superintendent of Timothy Hopkin's Sherwood Hall nurseries at Menlo Park. It is the intention of the new firm to erect extensive greenhouses and rent more land than was held by Mr. Coates, and to go into the business of floriculture to supply the San Francisco market with cut flowers and plants. It is said that two acres will be put into sweet peas this spring, and that other plants will be grown in proportion.

BUFFALO—On January 25 occurred the annual ball of the St. Andrew's Scottish Society, of which Mr. Wm. Scott, the florist, is president.

Chrysanthemums.

EASTER comes on April 14 this year.

A NEW GREENHOUSE, 17x56, is to be built for the Biological department of the University of Pennsylvania.

OBITUARY.—Josephine Baker Long, the wife of Elias A. Long, formerly editor of *Popular Gardening*, died last week at her home in Buffalo. Mrs. Long has been suffering from lung trouble for two years past and though everything possible was done to arrest the progress of the disease it finally resulted in her death. Mr. Long will have the sincere sympathy of his many friends in his affliction.

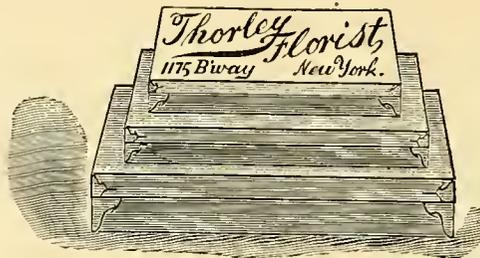

WE ARE advised that at the Pittsburg meeting of the S. A. F. the society will be invited to hold the convention of 1896 in Asheville, N. C., where Vanderbilt is creating his great country estate, and where the genial J. W. C. Deake and the Idlewild Floral Co. hold forth. Mr. Deake is the moving spirit in the matter, as also in the North Carolina Florists' Association, which will hold its annual meeting in Newbern this year.

MESSRS. I. N. Kramer & Sons, Cedar Rapids, Ia., send us a photograph giving a partial view of their chrysanthemum show last November. The display was certainly very extensive for an individual exhibition; some excellent plants and flowers are included, and the arrangement was very effective. Were it not that we have printed so many pictures of a similar character, and have already engraved others for which we have not yet found space, we would be glad to publish this and other similar ones that have been sent us by subscribers.

Catalogues Received.

D. M. Ferry & Co., Detroit, Mich, seeds; H. P. Kelsey, Kawana, N. C., hardy American plants; National Plant Co., Dayton, O., roses and greenhouse plants; J. M. Thorburn & Co., New York, seeds; Peter Henderson & Co., New York, wholesale plant and seed list; Carter's, London, Eng., seeds; R. & J. Farquhar & Co., Boston, seeds, plants and bulbs; J. M. McCullough's Sons, Cincinnati, O., seeds, plants and bulbs; Nanz & Neuner, Louisville, Ky., seeds, plants and bulbs; W. Atlee Burpee & Co., Philadelphia, seeds; T. W. Wood & Sons, Richmond, Va., seeds; Geo. B. Moulder, Smith's Grove, Ky., aquatic plants; H. Cannell & Sons, Swanley, England, seeds; same, chrysanthemums.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. UON, 114 Chambers street, New York, secretary and treasurer.

J. BOLGIANO & Co. is the name of a new seed firm at Baltimore, not the same as J. Bolgiano & Son.

VISITED CHICAGO: W. Brotherton, A. H. Goodwin, J. E. Northrup, J. T. Huntington, A. L. Rogers.

LANSING, MICH.—The Maynard & Coon Nursery and Seed Co. has been incorporated with headquarters at Walker. Capital stock \$5,000. Incorporators: James C. Maynard, Dennis Coon, Alex. Hamilton.

Cleveland.

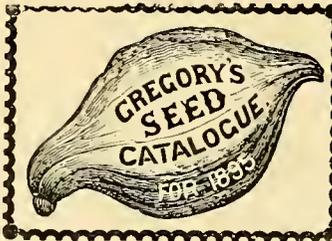

Since the holidays trade has been spasmodic, but summed up as a whole rather slow for January, and not by any means keeping pace with the business of last fall. Violets do not move so well, but the quality is not so good as earlier in the season. There is always a good demand for this modest flower during the Lenten season when other more pretentious flowers take the back seat. Bulbous stock of all kinds is now improving daily, and although tulips have been in the market since the first of December—they are only now salable, as the early ones were too short stemmed and the majority "cripples." The new crop of valley coming in is the finest seen here in years, and is quite an improvement on the cold storage valley in the market at Christmas. Carnations are improving slowly, but with the advent of longer days and more sunlight they lose that tendency to "go to sleep" after being exposed for sale the second day.

Wm. Brinker, formerly a carnation grower of Alliance has opened a cut flower and seed store on Erie street.

W. Gamble has moved from the Cyclorama building to 329 Prospect street. This is decidedly "up town" for business, but the firm is pleased with their new location, and in time expect to build up a good trade. L. F. D.

INDIANAPOLIS, IND.—The ninth annual meeting of the Society of Indiana Florists will be held in this city Monday, Feb. 4. The program includes an address by Mr. Fred Dorner, Lafayette, Ind., on "Florists clubs and societies; what can be done to make them more successful," and one by Mr. E. G. Hill, Richmond, Ind., on "The exhibitions of 1894." Copies of the full program may be had on application to the secretary, Mr. W. G. Berterman, 37 Mass. Ave., this city.

NEW BEDFORD, MASS.—The annual meeting of the Gardeners' and Florists' Club was held on January 14, when the following officers were elected: President, Peter Murray; vice-president, Peter C. Keith; treasurer, Robert Taber; recording secretary, C. J. Wood; Finance committee, William Keith, Robert Mitchell and James Garthley; Executive committee, Wm. Keith, Peter C. Keith, Robert Mitchell. At the conclusion of the regular business a supper was served, and during the evening John J. Roney, in behalf of the club, presented Robert Mitchell an elegant whip with gold trimmings.

THE most successful farmers and gardeners buy their seed directly from the growers; for this reason we raise largely the most risky kinds, especially Cabbage and Onion Seed. This latter is extra fine this season. No catalogue contains more varieties of vegetable seed, and none more of the new that are really good—see outside cover for an illustrated selection from our new specialties, which we will sell at half rates. Catalogue free. J. J. H. GREGORY & SON, Seed Growers, MARBLEHEAD, MASS.

GREVILLEA ROBUSTA.

FRESH SEED; CROP '94.
OZ. \$1.00; PKT. 25c.

Largely used for veranda boxes and centers of vases. A very useful plant and easily raised from seed. Grows rapidly; will stand a lot of rough usage, and often takes the place of a valuable palm as a pot plant. I make a specialty of choice Flower Seeds for Florists. 18 years' experience. Send for list.

MICHELL'S
Special Strain

MAMMOTH VERBENA SEED.

This mixture can not be surpassed for immense size of flower and brilliancy of colors; it is made of 40 per cent scarlets, 30 per cent. pinks, 20 per cent. blue and purples, 10 per cent. striped. Each flower is larger than a silver quarter and has a large showy eye. We have secured the whole crop of a Verbena special. Per trade packet, containing 750 seeds, 50c.; per 1/4 oz. 80c.; per oz. \$3.00. Order at once as this stock is limited. Verbenas grown from seed are preferable to those grown from cuttings, as they are free from rust.

SMILAX SEED—New crop, 50c. per oz.; 4 oz. for \$1.90.

Send for our Wholesale List of Flower Seeds now ready.

Cincinnati.

A week of rainy weather with a few warm days has not been conducive to great activity in the cut flower business. Roses are in fair quality considering the weather; carnations are excellent, and violets are of good average size and color. There are but few extra fancy roses in the market, the general demand for hybrids being too uncertain to encourage the growth extensively of these at so early a date, but there are some very fine crops in shape to come in later. There are some good azalea plants coming in now from the local growers. Mr. Peterson has a fine collection of them in his show window. The wholesalers report a good steady shipping trade ever since the holidays, with a strong demand for white flowers. Violets are getting more plentiful and in good demand. In bulb stuff of all kinds the supply is very light except Romans, which are being brought in by the bushel. Valley is getting better, but there is plenty of room for improvement yet. Paper whites and freesia meet with ready demand. Tulips are coming in, but are very short stemmed and sell poorly. Harrisias are getting a little scarce.

The annual meeting of the local society, which was to be held January 12, was postponed until January 26 on account of the bad weather.

H. C. Hatcher, with the Haupt Floral Co., of Louisville, Ky., has spent a week with us.

The Hoffmeister Floral Co. are cutting some fine American Beauies from a 200 foot house with five benches.

Corbett & Wilson have 56 sash of violets, from which they have cut over 40,000 flowers up to date. They picked 5,000 the day before Christmas. P.

COLUMBIA, Mo.—Mrs. L. N. Fitch has opened a floral store here.

THE Baltimore Cactus Society held its annual banquet January 16.

NOW is the time to plant VERBENA SEEDS

The progressive kind will meet your needs, And make a grand sensation: The kind that spans the silver half And makes progressive Florists laugh, And saves them much vexation.

New crop now ready. None but the best XXX seed offered. Will produce some grand novelties. We've had flowers 1½ inches across. First Premium at Mt. Holly Fair this year. ¼ oz 60c; ½ oz \$1; 1 lb. 10c.

Hand hybridized Double Petunias, Dreer's; none better. 500 seeds 6c; 1000 seeds \$1.00.

Single fringed, Dreer's and California Giant blended, saved from the most magnificent showy varieties in cultivation. 500 seeds 50c; 1000 seeds 50c.

Dwarf French Gold striped Marigold, makes nice pot plants for spring sales. Trade pkt. 2c.

Dwarf Marguerite Carnation, all saved from fine double flowers. Trade pkt. 25c. Lots of other good things. Novelty price list, free to ll.

Cash with order please. Address

WOOD BROTHERS, FISHKILL, N. Y.

The Sensational New Rose Mrs. PIERPONT MORGAN.

This is by far the greatest acquisition introduced since The Bride, and will be indispensable to all Florists. It will supersede nearly all the lighter shades of Hybrids. The individual flowers when in perfection are larger than American Beauty and very much superior in form and color, with fine handsome foliage and very stout stems from 16 to 24 inches long—the color, a bright, clear cerise Red, is the most brilliant by artificial light of any known variety. It is also the most prolific bloomer known. Mr. E. Asmus, of West Hoboken, and Mr. John Taylor, of Bayside—two of the most critical judges in the vicinity of New York—have each ordered

FIFTEEN HUNDRED PLANTS

of it after carefully inspecting it growing here. Orders are now being booked, which will be filled in strict rotation.

Extra good strong plants ready for delivery April 15th.

PRICE: \$7.50 per dozen; \$35.00 per 100; \$150.00 per 500; \$250.00 per 1000.

JOHN N. MAY,

..... SUMMIT, N. J.

Toronto.

The regular meeting of the Gardeners' and Florists' Association was held on the 15th inst. The attendance was somewhat slim for this time of year, as there was nothing particularly attractive to be brought up. The business of the evening was finished at an early hour. The committee to consider the advisability of amalgamating the summer and fall shows reported against amalgamation, but recommended the association to petition the Provincial Government to change the Electoral District Agricultural Society (which now holds the summer show) into a horticultural society. The committee was given power to act in the matter and lost no time in proposing the change at the annual meeting of the Electoral District Agricultural Society which took place the next night. The majority of the directors of this institution don't care a continental for horticulture, though they hold a horticultural show in order to comply with the law. They simply use it as a means of getting on to the Industrial Exhibition Association (which is a big thing in Toronto). The charter of the I. E. A. allows the twelve directors of the E. D. A. S. to be taken into the I. E. A. The proposal was a considerable surprise to the directors, but they promised to take it into their serious consideration after further and more full particulars had been given by Messrs. Gilchrist and Manton, and agreed to confer with the committee on the subject at an early date. Whether they do or whether they don't, however, the committee is determined to go ahead with the matter, and will go to the Government along with representatives from the cities of Hamilton, London, Kingston and Ottawa, which also want the change and will press their case with all the influence they can get to back it. There is little doubt I think but that the change will be made, but an increased grant is also wanted. At present the Toronto E. D. A. S. gets a grant of \$550 and the other cities mentioned get \$350 each. These grants have never been increased since they were first made, when none of the cities were a quarter of their present size, but the societies in the country have got several increases, so that the case is pretty strong on this point too. It is hoped that the other cities will take the matter up and send as large a delegation to interview the Government as possible. If this thing goes through, as we expect it will, horticulture can be made to boom in this province as it has never boomed before. But we have got to work for it.

The weather is particularly unsettled for this time of year; we have it mild, cold, dull, fine, snow, rain all in the same week. Some people say "variety is pleasing"; it depends upon circumstances; when we get a spell of fine weather we like it to last. The same remark might be applied to the state of trade, which is also unsettled; some good orders turn up now and then, but it can't be depended on. E.

Rooted Cuttings.

GERANIUMS.—All select standard bedders, ten or more varieties, mostly double and semi-double, sold in assortment only, at \$12.00 per 1000 (all labelled). Single scarlets, \$9.00 per 1000.

The Bride of Erlescourt CARNATION.

SEEDLING 1890. PORTIA X SILVER SPRAY.
 An extra large full flower, strong stem, good calyx, pearly white, delicately fringed, highly fragrant and an excellent shipper. Plant exceedingly healthy and grand grower; foliage stronger than Daybreak. Altogether the finest and most perfect White Carnation ever raised. This is our assertion, and we are borne out in it by hundreds of florists who have been to see it.
 Scores of testimonials are reaching us from all over the Continent.

HERE ARE SOME TO-DAY:
 MONTREAL, CAN., Jan. 21st, 1895.
 Dorchester St.

Gentlemen:—The Bride of Erlescourt is without exception the finest white Carnation I have ever seen, and have been handling cut flowers for over thirty years.
 Yours truly, J. S. MURRAY.

ALLIANCE, OHIO, Jan. 21st, 1895.
 MILLER & SONS, Bracondale, Ont.

Gentlemen:—I received your consignment of plants and flowers of Bride of Erlescourt in good order. Time forbids an analysis of this grand acquisition to the list of white carnations at this moment.

Suffice it to say it far exceeds my expectations; the character of the flower and the features of the plant place it beyond all question in the very front ranks of all existing whites.
 Yours very truly, L. L. LAMBORN.

Price of Rooted Cuttings, delivery March 15, \$3 per doz.; \$12 per 100; \$90 per 1000.
 Address **MILLER & SONS,**

NATHAN SMITH & SON,
ADRIAN, MICH.

Springfield, Mass.

After the rush of the holiday trade dealers naturally look forward to a season of less activity, but contrary to their customary anticipations the past three weeks following Christmas have been marked by an unusually brisk trade, due partly to the heavy funeral work and partly to the constantly increasing number of afternoon teas. The general trade in cut flowers during the week has been good.

W. F. Gale of the Gale Floral company attended the dinner of the New York Florists' Club in New York Saturday, January 19.

The board of management of the Hampden County Horticultural Society has decided upon the following dates for its annual flower shows: July 16 and 17, sweet pea exhibition; September 24 and 25, fruit and flower show; November 20, chrysanthemum show. The board has elected Professor S. T. Maynard of Amherst College professor of horticultural chemistry in the society.

W. S. Loomis gave a delightful address on "Trees and Shrubs" before the members of the Holyoke Horticultural Society recently. The paper was not so full of science as it was of nature. Like the late Dr. Oliver Wendell Holmes, who used to carry a tape measure around with him and measure all the big trees he met, Mr. Loomis has taken the trouble to measure all the large trees in this part of the state, and much of his address was taken up in presenting in detail the sizes of the various trees he had inspected.

At an adjourned annual meeting of the Springfield Amateur Horticultural Society held last week the following board of directors was chosen: Joseph Aumer, Harrison Johnson, C. L. Burr, N. J. Chamberlain, George D. Cooley, G. F. Gengenbach, E. R. Lee, George White, W. J. Eldred, E. D. Stock, Christopher Candrian, R. V. W. T. Hutchins, W. H. Sawyer and E. A. Potter. F. W. J.

Washington.

The collection of orchids at the Botanical Gardens had a narrow escape from freezing January 13 and 14. Late the night of the 13th the boiler in the orchid house burst. Supt. Smith quickly called his men together, and before the house had time to cool off rude charcoal stoves were improvised and fires started throughout the building. The workmen sat up all night Sunday and Monday watching the thermometers and keeping a normal temperature in the houses. Later, gasoline stoves were brought into requisition until a new boiler was secured and placed in position. The old boiler had been in use fourteen years. Supt. Smith says that not one of the orchids had been injured, though it took quick and hard work to keep up the required temperature with the make-shift heating apparatus. R.

Kansas City, Mo.

The meeting of the Florist Club held at the office of R. S. Brown & Sons was very enjoyable and the most instructive one held yet. Several subjects of great interest were very ably discussed, and next meeting promises still better, as there will be a number on hand with questions to be discussed. After all business had been disposed of and the meeting adjourned, Mr. Brown invited all over to his palatial residence, which was opened wide unto us all, and after a very enjoyable chat, all repaired to the dining room and partook of an excellent oyster supper. Such was Mr. Brown's hospitality, that all present declared that we meet there once again February 14. Our intention being to meet around with the members until such time as we can afford to get a home of our own. Next meeting we have for initiation, one of our most respected citizens, a great lover of floriculture—a good patron as well.

Business around town is rather dull. Only one or two report business moving. New Years was not what it ought to be, and but for a few funeral orders of good size, business would be simply awful.

James Payne has the best narcissus in town, and all of his stock is in good shape, but his roses have the nightmare badly.

A. Barbe was most unfortunate in getting one house frozen during our last blizzard, losing some 1,500 geraniums and other stock.

In town: Geo. M. Kellogg, Pleasant Hill, Mo. S. M.

YOKOHAMA, JAPAN.—Mr. Louis Boehmer sailed January 2 for Germany where he will remain a year or more for the benefit of his health. This will be his first visit to his native land in over twenty-five years. Mr. A. Unger remains in control of the firm's business during Mr. Boehmer's absence.

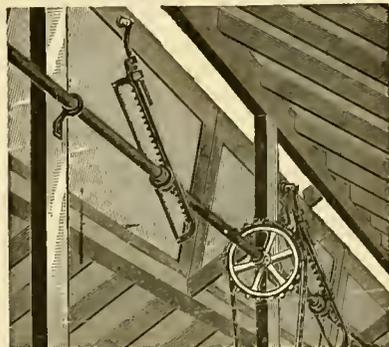

QUINCY, ILL.—Among the items the Illinois Soldiers' and Sailors' Home asks of the legislature is \$3,000 for a greenhouse.

SEE HERE
